PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years delivering secure internal tools and operational platforms in Java and React. Designs RESTful APIs, MySQL data layers, and AWS-hosted services for cross-functional teams in agile environments. Known for performance troubleshooting, code review leadership, and building maintainable business applications that support operations and support workflows in regulated, security-sensitive settings.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **internal operational platforms** using **Java** services and **React** dashboards, enabling support teams to resolve workflow bottlenecks 40% faster across lending operations.
- Built **RESTful API** layers connecting frontend applications to **MySQL**-backed data stores, standardizing access patterns and reducing duplicate query logic across 12 internal tool surfaces.
- Designed **AWS**-hosted deployment workflows for secure internal applications, implementing IAM-based access controls and environment isolation aligned with **secure software development** practices.
- Led cross-functional delivery with product managers and designers to scope and ship **business applications** supporting capital operations, releasing 6 major feature increments on two-week agile cadences.
- Optimized application performance by profiling **Java** service bottlenecks and database execution plans, cutting p95 API latency by 35% for high-traffic internal workflows.
- Conducted **code reviews** and established documentation standards for maintainable modules, mentoring 3 engineers on full stack patterns, testing practices, and engineering best practices.
- Integrated third-party financial data services into internal tooling through secure API consumption patterns, improving data freshness for operational dashboards used by 50+ daily active users.
- Troubleshoot production reliability issues across **React** frontends and backend services, adding monitoring instrumentation that reduced mean time to resolution for priority incidents.
- Balanced concurrent project priorities in a fast-paced environment, coordinating with technical and non-technical stakeholders to deliver high-quality internal tools without disrupting live operations.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java** backend services supporting risk and trading operations platforms, contributing to systems handling high-volume financial transactions under strict uptime requirements.
- Built **React** interfaces and internal admin tools for technology analysts, streamlining configuration workflows and reducing manual data entry across global operational teams.
- Maintained **MySQL** and relational database integrations for reporting applications, authoring optimized queries and migration scripts that supported recurring regulatory reporting cycles.
- Deployed and supported applications on **AWS** infrastructure, partnering with infrastructure teams on cloud-based hosting, provisioning, and environment consistency across development pipelines.
- Participated in **agile** sprint planning and delivery with product and engineering stakeholders, shipping incremental improvements to **internal tools** used by distributed technology groups.
- Implemented **RESTful API** endpoints for cross-team service consumption, enabling modular integration between front-office and back-office operational systems.
- Diagnosed and resolved application performance and security issues through systematic debugging and profiling, strengthening reliability of **security-sensitive** banking applications.

- Authored technical documentation and led peer **code reviews**, promoting clean, maintainable code standards across a 15-person engineering squad.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Contributed to **React** frontend features for a SaaS check-management platform, implementing responsive UI components with **JavaScript**, **HTML**, and **CSS** aligned to design specifications.
- Assisted in building **Java** backend endpoints supporting user authentication and workflow state management for internal customer support tooling.
- Wrote integration tests and resolved defects across full stack modules, improving test coverage for critical user registration flows by 25%.
- Collaborated with senior engineers in **agile** sprint cycles, participating in code reviews and adopting established patterns for maintainable application logic.
- Supported **MySQL** schema updates and data migration scripts under senior guidance, ensuring consistency across development and staging environments.
- Debugged staging environment issues, documenting root causes and resolution steps to strengthen the engineering team's troubleshooting knowledge base.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed web applications for nonprofit data visualization initiatives using **JavaScript** and modern frontend tooling, delivering 3 stakeholder-facing project sites on schedule.
- Implemented responsive layouts with **HTML** and **CSS**, ensuring accessibility and cross-browser compatibility for foundation program portals.
- Built lightweight backend scripts connecting frontend pages to **relational databases**, supporting content management workflows for program coordinators.
- Collaborated with remote stakeholders to gather requirements and iterate on **internal tools** for volunteer coordination and event management processes.
- Maintained deployed web properties with version-controlled code and documented deployment procedures for reliable handoff to foundation staff.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript, TypeScript, HTML5, CSS3, Responsive UI, Component Architecture

Backend: Java, Spring Boot, RESTful APIs, Microservices, Application Logic, Service Integration

Databases: MySQL, PostgreSQL, Relational Schema Design, Query Optimization, Data Migrations

Cloud & DevOps: AWS (EC2, S3, IAM, Lambda), CI/CD Pipelines, Environment Isolation, Secure Deployment

Monitoring & Tools: Application Performance Profiling, Logging, Incident Troubleshooting, Git, JUnit

Workflow & PM: Agile/Scrum, Cross-functional Collaboration, Code Reviews, Technical Documentation, Stakeholder Communication
