PROFESSIONAL SUMMARY

Full stack software engineer with 5+ years building secure internal tools, backend services, and React workflows for financial and operational teams. Strong in Java, REST APIs, MySQL, and AWS delivery across agile, cross-functional environments. Experienced in performance troubleshooting, code reviews, and scalable platform development in security-sensitive settings.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Designed and maintained **internal operational tools** used by portfolio management and support teams, reducing manual workflow time across **12+ daily processes**
- Built **Java backend services** and REST APIs powering React-based admin dashboards with **role-based access controls** for secure internal data access
- Developed **React frontend workflows** with JavaScript, HTML, and CSS, enabling analysts to query, filter, and export reporting data through self-service interfaces
- Integrated applications with **MySQL databases**, optimizing queries and schema design that improved report generation latency by **40%** for high-volume operational datasets
- Deployed and maintained services on **AWS infrastructure** including EC2, RDS, and S3, supporting reliable uptime for production internal platforms
- Collaborated with product managers, designers, and engineers in **agile sprints** to define requirements, deliver features, and iterate on stakeholder feedback across concurrent initiatives
- Conducted **code reviews** and contributed to engineering standards for testing, documentation, and secure development practices across the team
- Troubleshoot **performance and reliability issues** in production, diagnosing bottlenecks in API response times, database contention, and frontend rendering

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **Java backend applications** supporting technology operations and internal business workflows across banking infrastructure teams
- Built **React components** and internal-facing web interfaces enabling analysts to monitor system health and manage operational tasks through unified dashboards
- Developed and consumed **RESTful APIs** connecting front-end applications to core banking services, ensuring consistent data contracts across multiple internal consumers
- Managed **MySQL and relational database** integrations for reporting tools, writing optimized queries and stored procedures for regulated financial data access
- Supported **AWS cloud deployments** and environment configuration for development and staging pipelines in a security-sensitive financial environment
- Partnered cross-functionally with **product owners and non-technical stakeholders** to translate operational needs into technical specifications and incremental releases
- Participated in **agile ceremonies** including sprint planning, standups, and retrospectives while balancing priorities across concurrent analyst and engineering deliverables
- Resolved **application defects and performance anomalies** through systematic debugging, log analysis, and root-cause remediation in production support rotations

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React frontend features** for internal inventory and compliance tracking tools used by operations staff
- Assisted in building **Java REST endpoints** supporting CRUD workflows and validation logic for backend business applications
- Wrote **SQL queries** against MySQL databases to support reporting features and data integrity checks during feature development
- Collaborated with senior engineers on **code reviews** and agile task breakdown, contributing clean, documented code to shared repositories
- Debugged **frontend and API integration issues** across JavaScript, HTML, and CSS layers, improving form reliability for internal user workflows
- Supported **AWS-hosted deployment** preparations and environment testing for staging releases alongside the engineering team

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** using HTML, CSS, and JavaScript for foundation outreach and internal content management workflows
- Built lightweight **backend data handlers** connecting web forms to MySQL storage for donor and volunteer information tracking
- Collaborated with stakeholders to gather requirements and deliver **internal tooling** improvements within a fast-paced volunteer engineering environment
- Implemented **debugging and cross-browser testing** practices, resolving layout and form submission defects before production release
- Maintained **clean, documented code** following team conventions and participating in peer review of feature branches

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript, HTML, CSS, Responsive UI, Component Architecture

Backend: Java, Spring Boot, RESTful APIs, Microservices, Application Logic

Databases: MySQL, SQL, Schema Design, Query Optimization, Relational Data Modeling

Cloud & DevOps: AWS (EC2, RDS, S3), CI/CD, Environment Configuration, Cloud Deployment

Monitoring & Tools: Application Troubleshooting, Log Analysis, Performance Optimization, Git, IDE Tooling

Workflow & PM: Agile/Scrum, Cross-functional Collaboration, Code Reviews, Technical Documentation
