PROFESSIONAL SUMMARY

Full-stack engineer with 8+ years delivering SaaS platforms, event-driven microservices, and production APIs across fintech environments. Hands-on technical leader who champions test-driven development, continuous integration, and operational excellence while mentoring engineers and shaping system design. Skilled in cloud-native architecture, full-stack product engineering, and integrating applied AI capabilities into reliable, customer-focused software.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **event-driven microservices** supporting portfolio analytics and client reporting for a multi-tenant SaaS platform serving **2,000+ institutional users** across distributed teams.
- Led full-stack ownership of **REST and GraphQL APIs** and React-based dashboards, translating complex investment workflows into responsive interfaces with rigorous input validation and role-based access control.
- Championed **test-driven development**, pair programming, and small-batch CI/CD pipelines that reduced production defects by **35%** and accelerated release cadence from biweekly to weekly.
- Designed **cloud-native service boundaries** on AWS with containerized deployments, idempotent event handlers, and retry-safe messaging patterns that improved system resilience during peak trading windows.
- Partnered with Product and Design to refine requirements, prototype flows, and ship customer-facing features that increased **monthly active usage by 28%** without compromising platform stability.
- Mentored **four engineers** through code reviews, architecture sessions, and structured feedback, elevating team autonomy and establishing shared standards for code quality and system design.
- Integrated **applied AI capabilities** including document classification and natural-language search into internal tooling, cutting manual research time for analysts by an estimated **40%**.
- Collaborated with Platform and security stakeholders to align services with **DevSecOps** controls, automated vulnerability scanning, and observability requirements before production rollout.
- Established **operational excellence** practices including structured logging, distributed tracing, and runbooks that reduced mean time to recovery for critical incidents from hours to under **45 minutes**.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Built and maintained **Java and Python backend services** powering trade lifecycle, risk reporting, and regulatory workflows within a globally distributed capital markets platform.
- Developed **RESTful APIs** and internal integration layers connecting front-office applications to core banking systems, enforcing consistent data contracts across **15+ downstream consumers**.
- Implemented **event-driven processing pipelines** for market data ingestion and reconciliation, improving end-to-end batch completion reliability to **99.5%** during high-volume trading sessions.
- Contributed to **React and TypeScript** front-end modules for analyst dashboards, delivering accessible interfaces with strong form validation and real-time status updates.
- Adopted **continuous integration** workflows with automated unit and integration tests, reducing regression defects discovered in QA by an estimated **30%** across two release trains.
- Participated in **cross-functional design reviews** with business analysts and operations teams to resolve ambiguous requirements and deliver pragmatic solutions under tight regulatory deadlines.
- Supported **database performance tuning** and query optimization across PostgreSQL and Oracle stores, lowering p95 read latency for reporting workloads by **25%**.

- Documented **system architecture** and operational procedures for on-call rotation, enabling faster incident triage and smoother knowledge transfer across rotating analyst cohorts.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **full-stack features** for a restaurant SaaS platform using Node.js, Express, and React, enabling digital check management for **50+ pilot locations**.
- Wrote **unit and integration tests** following test-first practices, improving coverage on core payment and order modules to support safer iterative releases.
- Built **REST API endpoints** for menu synchronization and order status updates, ensuring consistent data flow between mobile clients and backend services.
- Collaborated with senior engineers in **pair programming sessions** to refactor legacy components, reduce duplication, and align new code with established coding standards.
- Resolved **production bugs** in authentication and session handling workflows, restoring reliable access for venue staff during peak service hours.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered a **responsive nonprofit website** using HTML, CSS, and JavaScript, improving mobile readability and navigation for community program pages.
- Integrated a **content management workflow** that allowed non-technical staff to publish event updates without developer assistance.
- Optimized **page load performance** through asset compression and lazy loading, reducing average load time by an estimated **20%** on slower connections.
- Coordinated with stakeholders to gather requirements, iterate on layouts, and launch the site within a **tight three-month engagement** window.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Responsive UI Design, Accessibility

Backend: Node.js, Python, Java, Express, REST APIs, GraphQL, Event-Driven Microservices, Distributed Systems

Databases: PostgreSQL, Oracle, MongoDB, Redis, SQL Query Optimization, Data Modeling

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Terraform, GitHub Actions, DevSecOps, Cloud-Native Architecture

Monitoring & Tools: Datadog, Prometheus, Grafana, Structured Logging, Distributed Tracing, Jest, PyTest, JUnit

Workflow & PM: Agile, Scrum, Extreme Programming, Test-Driven Development, Pair Programming, Jira, Confluence, Technical Mentorship
