

Ryan Cho

Senior Software Engineer - React & TypeScript

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Software engineer with 8+ years building React and TypeScript web applications, internal admin platforms, and operational dashboards in finance and SaaS. Skilled at translating ambiguous operational requirements into production features, integrating third-party APIs, and designing data-heavy interfaces with React Query, multi-step state management, and disciplined Jest and E2E testing. Experienced mentoring engineers and driving cross-functional delivery in remote organizations.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned end-to-end delivery of **React and TypeScript** internal operational dashboards for portfolio reporting, enabling analysts to reconcile positions and audit trade activity across high-volume **REST API** workflows.
- Built a **partner onboarding portal** with complex multi-step form state, optimistic updates, and **React Query** caching that streamlined referral verification and reduced manual back-office review for growth operations teams.
- Integrated **third-party CRM and messaging platforms** for campaign segmentation and promotion delivery, defining data contracts and reconciliation checks between external delivery systems and internal ledger services.
- Architected shared **component and hook libraries** for data-heavy admin surfaces, improving table render performance on large datasets through memoization, virtualization, and targeted lifecycle optimization.
- Collaborated with backend engineers to trace **GraphQL and REST** data flows through BFF services, contributing type-safe client models and surfacing payout and reporting edge cases before production release.
- Established **Jest and Playwright** testing standards for critical operational paths, expanding component coverage and preventing regressions in approval workflows tied to financial reconciliation.
- Mentored **junior engineers** on React architecture, code review practices, and scoping ambiguous stakeholder requests into incremental, shippable technical plans during design and planning sessions.
- Participated in **on-call rotation** for production admin tooling, diagnosing third-party integration failures and deploying fixes through **CI/CD pipelines** and containerized release workflows.
- Contributed to **Kubernetes-based deployment** and feature-flag rollouts, balancing release velocity with auditability requirements while partnering with operations on cross-functional tradeoff decisions.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **React** internal tooling for trading operations, converting loosely defined regulatory reporting needs into concrete **TypeScript** UI workflows backed by typed API clients.
- Delivered operational dashboards presenting real-time risk metrics from **REST APIs**, applying performance tuning for filter-heavy, data-dense views used daily by regional analyst teams.
- Integrated internal platforms with **third-party market data and messaging services**, documenting data contracts and failure-handling patterns to preserve accuracy across reconciliation pipelines.
- Implemented **state management** for multi-step approval forms with async validation, reducing submission errors in back-office tools processing sensitive financial records.
- Authored **Jest unit and component tests** for shared UI modules, improving reliability of form-heavy applications and accelerating safe refactors across internal admin codebases.
- Partnered with quants and operations stakeholders in a **remote-first** setting to validate requirements, communicate technical tradeoffs in writing, and align delivery plans with business deadlines.
- Supported **CI/CD adoption** for frontend packages and containerized local development, helping teams ship admin platform updates with consistent build and deployment workflows.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React** features for an internal inventory admin dashboard, consuming **REST APIs** and applying hooks-based patterns for search, filtering, and paginated list views.
- Implemented reusable form components with controlled state and client-side validation for operational data entry workflows used by warehouse and fulfillment staff.
- Wrote **Jest component tests** for shared UI elements, catching regressions before releases to production admin tooling.
- Collaborated with senior engineers in code reviews to strengthen **TypeScript** typing and component reusability across the application codebase.
- Assisted with **third-party payment platform** integration testing, verifying webhook payloads and field mappings against internal order and inventory records.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed responsive **React** pages for a nonprofit web platform, integrating content APIs and improving accessibility across donor-facing and lightweight internal admin views.
- Built reusable UI components with modern JavaScript and CSS, enabling faster iteration on campaign landing pages and event registration flows.
- Worked with stakeholders to translate open-ended content goals into structured layouts, navigation patterns, and maintainable page templates.
- Shipped updates through version-controlled workflows, supporting **remote collaboration** with distributed contributors on a small engineering team.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, React Query, RTK Query, Redux, HTML5, CSS3, React Native, component performance optimization, form and workflow state management

Backend: Node.js, REST APIs, GraphQL, Go (read-level), Ruby on Rails (read-level), API contract design

Databases: PostgreSQL, MySQL, Redis

Cloud & DevOps: Docker, Kubernetes, ArgoCD, CI/CD, GitHub Actions, containerized local development, web deployment workflows

Monitoring & Tools: Jest, Playwright, Cypress, Braze, Git, Webpack, Vite, AI-assisted development tools

Workflow & PM: Agile/Scrum, cross-functional collaboration, technical mentoring, on-call rotation, Jira, remote engineering
