

Ryan Cho

Senior Software Engineer — React, TypeScript & Internal Platforms

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> ·
<https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Software engineer with 7+ years building production web applications across finance and SaaS. Deep expertise in React, TypeScript, and data-heavy internal platforms—admin dashboards, operational tooling, and third-party integrations. Proven at translating ambiguous business requirements into scalable technical plans, mentoring engineers, and delivering measurable outcomes in fully remote teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **React and TypeScript admin dashboards** for portfolio operations, consolidating fragmented workflows into a unified internal platform used daily by **40+ analysts** across remote teams
- Integrated **REST and GraphQL APIs** with third-party CRM and messaging providers, establishing typed data contracts and validation layers that reduced integration defects by **35%** during quarterly releases
- Built complex **multi-step form workflows** with React Query and optimistic updates, enabling operations staff to process high-volume partner onboarding with **sub-second UI feedback** on async actions
- Owned end-to-end feature delivery for a **partner operational portal**, collaborating with product and compliance stakeholders to define requirements, surface tradeoffs, and ship audit-ready payout tracking capabilities
- Drove **component architecture and performance optimization** across data-heavy views—virtualized tables, memoized selectors, and lazy-loaded modules cut dashboard load times by **45%** on large datasets
- Established **Jest and Playwright testing standards** for critical admin flows, increasing frontend test coverage to **82%** and catching regressions before production deploys in CI pipelines
- Mentored **two junior engineers** on TypeScript patterns, code review practices, and React performance tuning, accelerating independent feature ownership within one quarter
- Participated in **on-call rotation** for production internal tools, triaging incidents, coordinating cross-team fixes, and documenting runbooks that reduced mean time to recovery by **30%**
- Contributed to **Docker-based local dev environments** and Kubernetes deploy workflows, improving developer setup consistency and enabling safer staged rollouts via CI/CD automation

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **React and TypeScript internal tooling** for trade operations and risk reporting dashboards, replacing manual spreadsheet processes and saving analysts an estimated **12 hours per week**
- Integrated internal services with **third-party market data and messaging platforms** via REST APIs, implementing schema validation and error-handling middleware for reliable cross-system data exchange
- Translated **ambiguous operational requirements** from business stakeholders into technical specifications and phased delivery plans for back-office workflow enhancements
- Built **data-heavy form interfaces** with robust state management for multi-step compliance workflows, ensuring audit trails and reconciliation accuracy aligned with financial reporting standards
- Implemented **unit and component tests with Jest** across frontend modules, improving release confidence and reducing post-deploy defects in operational dashboards by **25%**
- Collaborated with backend engineers on **GraphQL and REST API design**, reviewing data models and tracing request flows to deliver type-safe client integrations without translation overhead
- Supported **CI/CD pipeline improvements** for containerized web deployments, enabling faster iteration on internal admin features across remote engineering squads

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React web applications** and reusable UI components for customer-facing and internal features, applying hooks-based patterns and responsive design principles across the product codebase
- Consumed **REST APIs** to power dynamic dashboards and form-driven workflows, coordinating with backend teammates on data contracts and pagination strategies for list-heavy views
- Wrote **Jest unit tests** for critical UI modules, establishing baseline testing practices that improved code quality during code review cycles
- Participated in **agile sprint planning** and cross-functional design sessions, delivering feature increments that aligned product requirements with technical feasibility
- Optimized **component rendering performance** through memoization and efficient state updates, improving page responsiveness on data-intensive admin screens

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed and maintained **responsive web pages** using modern JavaScript and CSS, delivering accessible content updates for foundation stakeholders on tight deadlines
- Implemented **client-side form validation** and interactive UI elements, improving submission accuracy and reducing manual data cleanup for internal administrators
- Collaborated with remote team members via **structured written communication**, documenting implementation decisions and deployment steps for knowledge sharing
- Integrated lightweight **third-party embeds and API-driven content**, extending site functionality without compromising load performance

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, React Query, RTK Query, HTML5, CSS3, React Native, Redux, Jest, Playwright, Cypress, Webpack, Vite

Backend: Node.js, GraphQL, REST API Design, Express, Ruby (read-level), Go (read-level)

Databases: PostgreSQL, MongoDB, Redis

Cloud & DevOps: Docker, Kubernetes, ArgoCD, CI/CD, GitHub Actions, AWS, Containerized Local Dev

Monitoring & Tools: Datadog, Sentry, Braze, Git, VS Code, AI-Assisted Development Tools

Workflow & PM: Agile/Scrum, Jira, Confluence, Cross-Functional Collaboration, Technical Mentorship, On-Call Incident Response
