PROFESSIONAL SUMMARY

Full stack software engineer with 5+ years building distributed backend services and React platform applications across finance and investment technology. Experienced architecting shared services, data pipelines, and high-availability systems on cloud infrastructure using Java, Python, PostgreSQL, Redis, and Kafka. Combines strong cross-team collaboration with hands-on delivery of scalable platform components that reduce engineering friction and support mission-critical workloads.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and maintained **shared platform services** in Java and Python supporting portfolio analytics, trade reconciliation, and reporting workflows across multiple internal product teams.
- Designed **high-availability REST and gRPC APIs** deployed on Kubernetes with PostgreSQL and Redis caching, sustaining responsive performance under peak trading-day load.
- Built **React internal tooling** with React Query, Storybook, and Cypress coverage, enabling operations teams to configure investment workflows without engineering intervention.
- Led migration of batch **data pipelines** to Apache Airflow orchestrating Snowflake and PostgreSQL transformations, shortening reconciliation cycles from daily to hourly runs.
- Introduced **Kafka event streaming** for cross-service notifications and audit logging, decoupling downstream consumers from core transaction processing systems.
- Partnered with security and compliance stakeholders to implement **observability guardrails** across shared libraries, improving incident detection across platform services.
- Mentored 3 junior engineers on **distributed systems design**, code review practices, and full stack delivery through recurring knowledge-sharing sessions.
- Drove **GCP cost optimization** through autoscaling policies, container right-sizing, and BigQuery query tuning on analytics workloads.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java microservices** supporting trade lifecycle, settlement, and risk reporting platforms processing institutional volume across global markets desks.
- Implemented **PostgreSQL data models** and stored procedures for regulatory reporting pipelines, ensuring accurate end-of-day reconciliation across upstream trading systems.
- Built **React dashboards** for operations and compliance teams to monitor batch job status, exceptions, and SLA adherence across distributed backend services.
- Collaborated with an architecture guild to standardize **shared service contracts** and API versioning across 8 technology teams, reducing integration defects during release cycles.
- Owned a **Redis-backed caching layer** for frequently accessed reference data, lowering database read pressure during peak market open windows.
- Contributed **Python automation** and Airflow DAGs for vendor feed ingestion into internal warehouse schemas supporting business intelligence reporting.
- Participated in **on-call rotation** for payment and clearing systems, diagnosing production incidents and delivering root-cause fixes under strict SLAs.
- Delivered design reviews and **technical knowledge-sharing sessions** on fault-tolerant service patterns for incoming analyst cohorts.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React components** and REST integrations for customer-facing inventory management features used by restaurant partners on the platform.
- Assisted in building **Java Spring Boot APIs** with PostgreSQL persistence for order tracking and notification workflows.
- Wrote **Cypress end-to-end tests** and Jest unit tests, expanding frontend coverage on critical checkout and authentication flows.
- Collaborated with senior engineers on **code reviews** and agile sprint ceremonies, shipping incremental features to production on biweekly cadences.
- Refactored legacy SCSS into **modular component styling**, improving maintainability of shared UI patterns across the application.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web applications** using JavaScript and React for nonprofit program management and donor engagement portals.
- Integrated **PostgreSQL-backed APIs** for content management and event registration, supporting foundation staff across remote operations.
- Deployed applications to **cloud hosting** with CI pipelines, enabling reliable releases for seasonal fundraising campaigns.
- Partnered with stakeholders to translate **business requirements** into technical specifications and iterative UI prototypes.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, React Query, React Router, JavaScript, TypeScript, SCSS, Cypress, Jest, Storybook, HTML5, CSS3

Backend: Java, Python, gRPC, REST APIs, Dropwizard, Spring Boot, Node.js

Databases: PostgreSQL, Redis, Snowflake, BigQuery, Graph Databases

Cloud & DevOps: Google Cloud Platform, Kubernetes, Docker, Apache Kafka, Apache Airflow, CI/CD

Monitoring & Tools: Prometheus, Grafana, Datadog, Git, GitHub Actions

Workflow & PM: Agile/Scrum, Jira, Technical Design Reviews, Cross-team Collaboration, Mentorship
