PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building data-driven web applications, workflow tools, and secure integrations across finance and enterprise environments. Skilled at translating business use cases into scalable, usable software through close collaboration with analysts and data teams. Experienced in interactive UIs, governed API access, performance tuning, and iterative delivery.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected **interactive workflow applications** that orchestrated multi-step portfolio and risk processes, reducing manual handoffs and giving stakeholders real-time visibility into task completion across teams.
- Built **REST and event-driven integrations** with third-party data providers and internal services, enforcing role-based access controls and audit logging for governed, secure data exchange.
- Led **performance optimization** of data-heavy dashboards serving 200+ daily users, cutting average page load times by 40% through query tuning, caching strategies, and frontend bundle refinement.
- Partnered with **business analysts and data engineers** to convert workshop-defined use cases into production features, delivering 15+ enhancements across two major platform releases.
- Designed reusable **React component libraries** and API abstractions that accelerated cross-squad delivery while maintaining consistent usability patterns across SaaS modules.
- Drove **root-cause debugging** and production incident resolution for workflow failures, establishing runbooks that shortened recovery time on critical operational paths.
- Mentored two junior engineers on **full stack architecture**, code review standards, and iterative delivery practices within an agile, remote-first engineering organization.
- Championed **continuous improvement** through user feedback loops, telemetry-driven prioritization, and iterative UX refinements that increased adoption on core workflow surfaces.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **internal web applications** for trade operations and analytics teams, integrating structured datasets from enterprise data stores into actionable operational views.
- Built **secure API integrations** between front-office tools and backend services, applying authentication policies and data classification rules for regulated financial workflows.
- Collaborated with **business stakeholders and data teams** during requirements workshops to translate operational use cases into technical specifications and prioritized delivery backlogs.
- Improved **usability and scalability** of analyst-facing tools used by 50+ staff, refactoring legacy modules to support growing data volumes and concurrent user sessions.
- Automated **data-driven reporting workflows** that replaced manual spreadsheet processes, saving analysts an estimated 10+ hours per week across the trading desk.
- Conducted **systematic debugging** of integration failures across staging and production environments, documenting fixes and preventive checks for downstream support teams.
- Supported **continuous enhancement** of platform components through sprint delivery, automated testing, and peer code reviews within a globally distributed organization.

Software Engineering Intern Chexology

Jun/2018 - May/2019

Remote | 17th Floor, New York

- Implemented **full stack features** for a SaaS product using React and Node.js, contributing to customer-facing workflows and internal admin tooling across multiple release cycles.
- Integrated **third-party APIs** for payments and notifications with robust validation and error handling, improving reliability of order processing and fulfillment flows.
- Assisted in **production debugging** by tracing application logs and reproducing edge cases, resolving defects that improved checkout completion and customer support efficiency.
- Participated in **agile ceremonies and code reviews** with senior engineers, gaining hands-on experience delivering features on a remote engineering team in New York.
- Refactored **UI components** for improved responsiveness and accessibility across mobile and desktop breakpoints, aligning interface behavior with design system standards.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** and content management workflows for a nonprofit foundation site, improving information architecture and donor engagement flows.
- Implemented **JavaScript-driven interactions** and form validations that streamlined event registration and newsletter sign-up processes for site visitors.
- Optimized **page performance** through asset compression and lazy loading, achieving faster load times on mobile devices for primary landing pages.
- Collaborated with stakeholders to **gather requirements** and iterate on design feedback during a rapid three-month delivery window.
- Ensured **cross-browser compatibility** and accessibility fundamentals across deployed pages using semantic HTML, CSS, and progressive enhancement techniques.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Responsive UI, Component Design, Workflow Interfaces

Backend: Node.js, Python, Java, REST APIs, GraphQL, Microservices, Event-Driven Architecture, Secure Integrations

Databases: PostgreSQL, MongoDB, SQL Server, Redis, Data Modeling, Query Optimization, Structured Datasets

Cloud & DevOps: AWS, Docker, CI/CD, GitHub Actions, Terraform, Kubernetes, Environment Configuration

Monitoring & Tools: Datadog, Sentry, Grafana, Jest, Cypress, Postman, Git, VS Code

Workflow & PM: Agile/Scrum, Jira, Confluence, Cross-functional Collaboration, Requirements Workshops, Technical Documentation
