PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building scalable web applications and enterprise backend systems across finance and regulated industries. Deep expertise in React, Node.js, and cloud-native microservices on AWS, delivering reporting and analytics platforms serving thousands of daily users. Strong backend development focus with PostgreSQL, OpenAPI, and CI/CD automation. Collaborative Agile practitioner skilled in cross-functional design reviews, specification gathering, and quality-driven delivery.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **full stack reporting applications** using React, Node.js, and OpenAPI specifications, enabling portfolio analytics and decision-making dashboards for investment teams across **15+ business units**
- Built **enterprise-level backend microservices** on AWS with PostgreSQL, processing **500K+ daily transactions** and supporting real-time data aggregation for regulatory and internal reporting workflows
- Led **CI/CD pipeline modernization** with Jenkins and Terraform, reducing deployment cycles from days to hours and achieving **99.9% uptime** across production environments
- Designed RESTful APIs and **OpenAPI documentation** consumed by internal and external stakeholders, standardizing integration patterns across **8 cross-functional product teams**
- Mentored **3 junior engineers** on design patterns, automated testing, and code review practices, elevating team delivery velocity and reducing production defect rates by **40%**
- Partnered with product owners and QA in **Agile sprint ceremonies** to gather specifications, conduct design reviews, and ship iterative enhancements to web application user experiences
- Implemented **automated testing suites** covering unit, integration, and end-to-end scenarios, strengthening quality assurance gates within GitHub-based pull request workflows
- Optimized PostgreSQL query performance and **database indexing strategies**, cutting average report generation latency by **60%** for analytics-heavy workloads
- Collaborated with DevOps and security teams to enforce **cloud computing best practices**, VPN-compliant remote access policies, and IP allowlisting for regulated financial data environments

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **backend services in Java and Node.js** supporting trade reporting and analytics dashboards used by operations teams managing **\$2B+ in daily transaction volume**
- Contributed to **microservices architecture** migration from monolithic systems, decoupling critical reporting modules and improving release independence for **12 application teams**
- Built interactive **React.js web applications** for internal risk and compliance reporting, enhancing user experience for analysts reviewing regulatory submission data
- Participated in **Agile development cycles** using JIRA and Confluence, translating business requirements into technical specifications through stakeholder collaboration sessions
- Automated **continuous integration and delivery** workflows via Jenkins, integrating Git-based version control and reducing manual deployment steps across development environments
- Designed and maintained **PostgreSQL schemas** for financial reporting pipelines, ensuring data integrity across ETL processes feeding analytics and audit systems
- Conducted **code reviews and design pattern** assessments with senior engineers, promoting consistent API contracts and secure coding standards across the technology analyst cohort

- Supported **AWS cloud infrastructure** provisioning and monitoring for backend services, coordinating with DevOps teams on capacity planning and incident response procedures

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React.js components** and Node.js API endpoints for a SaaS check-management platform, supporting core workflow features used by restaurant clients nationwide
- Implemented **automated testing** with Jest and integration tests, improving code quality and reducing regression bugs in weekly release cycles
- Collaborated with senior engineers in **Agile standups and sprint planning**, delivering assigned feature tickets through GitHub pull requests and peer code reviews
- Assisted in **PostgreSQL database** migrations and query optimization for customer reporting modules handling transaction history lookups
- Participated in **UI/UX design reviews**, translating wireframes into responsive web application interfaces aligned with product specifications

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **JavaScript and HTML/CSS** web pages for a nonprofit foundation site, improving content delivery and mobile responsiveness across primary user entry points
- Integrated **third-party APIs** for event registration and donation workflows, enabling self-service functionality for community outreach programs
- Collaborated remotely with a **cross-functional volunteer team** using Git version control to manage code contributions and deployment updates
- Applied foundational **software development principles** including component reuse and browser compatibility testing to maintain consistent user experience standards

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, JavaScript, HTML5, CSS3, Responsive Web Design, User Experience

Backend: Node.js, Java, OpenAPI, RESTful APIs, Microservices, Design Patterns

Databases: PostgreSQL, SQL, Database Optimization, Schema Design

Cloud & DevOps: Amazon Web Services (AWS), Terraform, Jenkins, Continuous Integration, Continuous Delivery, DevOps, Cloud Computing

Monitoring & Tools: GitHub, Git, Automated Testing, Quality Assurance

Workflow & PM: Agile, JIRA, Confluence, Specification Gathering, Design Review, Project Management, Collaboration
