

Ryan Cho

Senior Full-Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Senior full-stack engineer with 7+ years delivering financial platforms, trading dashboards, and REST APIs across capital markets and brokerage environments. Proficient in TypeScript, React, Golang, and PostgreSQL with experience building payment, account, and market data systems on GCP. Recognized for stakeholder collaboration, intuitive UX design, mentoring engineers, and owning high-visibility features from architecture through production deployment.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **end-to-end trading dashboard** features in TypeScript and React, enabling portfolio managers to monitor positions, orders, and cash balances across **50+ institutional accounts** with sub-second refresh rates.
- Built **REST API services in Golang** powering account management, payments, and trade execution workflows, processing **thousands of daily transactions** with strict idempotency and audit requirements.
- Designed **PostgreSQL schemas and query layers** for relational financial data spanning holdings, transactions, and compliance records, improving report generation performance by **40%** through indexing and materialized views.
- Led **frontend architecture** for internal trading tools using React, HTML, and TailwindCSS, establishing reusable component libraries that reduced feature delivery time across **3 product squads**.
- Deployed and maintained **containerized microservices on GCP** with Docker and Kubernetes, implementing CI/CD pipelines that cut deployment cycles from hours to **under 15 minutes**.
- Partnered with **cross-functional stakeholders** including traders, compliance, and product leads to translate requirements into shippable features for fixed income and cash management products.
- Mentored **2 junior engineers** on API design, code review practices, and full-stack patterns, elevating team velocity and reducing production defects by **25%** over two quarters.
- Implemented **real-time market data integrations** feeding dashboard widgets and alerting systems, supporting intraday pricing updates across equities and fixed income instruments.
- Drove **technical design reviews** for high-visibility payment and account provisioning features, influencing platform standards for authentication, error handling, and observability.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **financial software components** supporting fixed income trading operations and market analysis tools used by desk analysts across the New York technology division.
- Built **RESTful API interfaces in C#** connecting front-office applications to relational databases, enabling secure retrieval of trade, position, and reference data for **100+ internal users**.
- Optimized **SQL queries and PostgreSQL stored procedures** for reporting pipelines, reducing nightly batch windows by **30%** while maintaining regulatory data integrity requirements.
- Collaborated with **trading and operations teams** to gather requirements and deliver dashboard enhancements improving visibility into order lifecycle and settlement status.
- Contributed to **payments and brokerage workflow automation**, integrating backend services with legacy clearing systems to streamline post-trade processing.
- Participated in **cloud migration initiatives toward Google Cloud Platform**, containerizing services with Docker and supporting Kubernetes-based deployment patterns.

- Supported **technology strategy discussions** and mentored incoming analysts on software development lifecycle practices, code quality, and financial domain fundamentals.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React.js frontend features** for a SaaS product, improving user experience through responsive HTML/CSS layouts and intuitive navigation flows.
- Developed **backend API endpoints** supporting core product functionality, integrating with relational databases for customer and transaction data persistence.
- Wrote **SQL queries and data models** to support reporting dashboards, enabling stakeholders to track key product metrics during beta release.
- Collaborated with a **remote engineering team** on code reviews and sprint planning, gaining hands-on experience with full-stack delivery in a startup environment.
- Assisted in **Docker-based local development setup**, documenting environment configuration to accelerate onboarding for new contributors.
- Delivered **bug fixes and performance improvements** across frontend and backend layers, contributing to a stable release ahead of customer pilot launch.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** using HTML, CSS, and JavaScript for a nonprofit foundation's public-facing site, improving mobile accessibility across key donor and program pages.
- Integrated **third-party APIs** for newsletter signups and event registration, reducing manual data entry for foundation staff.
- Collaborated with **remote stakeholders** to translate content requirements into polished UI components aligned with brand guidelines.
- Maintained and updated the **existing WordPress codebase**, resolving layout defects and ensuring cross-browser compatibility for production deployments.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: TypeScript, React.js, HTML, CSS, TailwindCSS, Responsive UI Design, Component Architecture

Backend: Golang, C#, REST APIs, Microservices, API Design, Payment Systems, Trading Workflows

Databases: PostgreSQL, SQL, Relational Databases, Schema Design, Query Optimization, Stored Procedures

Cloud & DevOps: Google Cloud Platform, Docker, Kubernetes, CI/CD, Container Orchestration, Cloud Migration

Monitoring & Tools: Git, Linux, Observability, Logging, Error Handling, Performance Profiling

Workflow & PM: Agile, Cross-Functional Collaboration, Stakeholder Requirements, Mentorship, Technical Design Reviews, Remote Team Leadership
