### PROFESSIONAL SUMMARY

---

Full stack engineer with 8+ years delivering web platforms across finance and technology. Hands-on with Node.js, React, and Java microservices, including authentication flows, API integration, and service consolidation. Use AI development tools daily to improve velocity and code quality. Self-directed across parallel workstreams, with experience mentoring developers, leading feature delivery, and triaging security vulnerabilities in production systems.

### WORK EXPERIENCE

---

#### Software Engineer

May/2022 - May/2026

##### Aspen Capital

Remote | 10th Floor, New York

- Architected and shipped **full-stack account and authentication features** across Node.js services and React clients, enabling secure session management for **12K+ active users** without degrading login latency.
- Drove **microservices consolidation** by mapping overlapping legacy services, retiring 4 redundant endpoints, and reducing cross-service dependencies by **30%** across the platform estate.
- Built **REST and GraphQL API integrations** connecting internal portfolio systems to third-party data providers, processing **2M+ records daily** with idempotent retry handling and structured error contracts.
- Integrated **AI-assisted development workflows** (Cursor, Codex) into daily feature delivery, shortening implementation cycles on greenfield modules while maintaining thorough **code review standards**.
- Triageed and remediated **OWASP-category security vulnerabilities** as part of each release cycle, closing **45+ findings** spanning dependency, injection, and auth configuration gaps.
- Led a **cross-functional feature squad** of 3 engineers through a loyalty rewards migration, coordinating backend schema changes with frontend rollout plans across two sprint cycles.
- Upgraded **Java Spring Boot** and **React** framework versions across 6 services, resolving breaking changes and stabilizing build pipelines for continuous deployment.
- Mentored **two junior engineers** on API design, testing practices, and React component patterns, improving PR turnaround time and reducing rework on shared modules.
- Owned **production incident triage** for authentication and account services, restoring degraded flows within SLA targets and documenting root-cause patterns for recurring failure modes.

#### Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

##### Summer Analyst,

##### BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **Java microservice APIs** supporting trade reporting and client account workflows used by **200+ internal analysts** across front-office systems.
- Refactored legacy **authentication middleware** to token-based session validation, reducing unauthorized redirect loops and hardening access across **8 web applications**.
- Integrated **Node.js utility services** with core banking APIs for reconciliation jobs, improving overnight batch completion reliability by **25%**.
- Contributed to **React dashboard enhancements** for internal operations tools, translating wireframes into reusable components within established design system constraints.
- Conducted **peer code reviews** on API contracts and database migrations, catching schema inconsistencies before they reached staging environments.
- Remediated **security scan findings** from quarterly penetration tests, patching dependency vulnerabilities and tightening input validation on public-facing endpoints.
- Supported **framework and library upgrades** across Java services during major version migrations, coordinating regression testing with QA and release management teams.

## Software Engineering Intern

Jun/2018 - May/2019

### Chexology

Remote | 17th Floor, New York

- Implemented **React UI components** for inventory tracking features, wiring form validation and API hooks against Node.js backend endpoints.
- Built **REST API endpoints** in Node.js for check-in and checkout workflows, enabling real-time updates across mobile and web clients.
- Wrote **unit and integration tests** covering critical payment and authentication paths, raising coverage on assigned modules to **85%**.
- Resolved **production authentication bugs** through structured debugging and logging improvements, reducing repeat ticket volume for the support team.
- Collaborated on **code reviews** with senior engineers, incorporating feedback on error handling patterns and async data-fetching conventions.

## Web Developer

Sep/2017 - Nov/2017

### Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** using HTML, CSS, and JavaScript for foundation outreach campaigns, ensuring cross-browser compatibility across donor-facing properties.
- Integrated **third-party form and email APIs** to capture donor submissions and sync contact records into the content management system.
- Optimized page **load performance** through asset compression and lazy loading, improving Lighthouse performance scores on key landing pages.
- Maintained content updates and **bug fixes** across the public site during a high-traffic fundraising period with zero extended downtime incidents.

## EDUCATION

---

### New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

## SKILLS

---

**Frontend:** React, JavaScript, TypeScript, HTML5, CSS3, Redux, Webpack, Responsive UI, Component Libraries

**Backend:** Node.js, Java, Spring Boot, REST APIs, GraphQL, Microservices Architecture

**Databases:** PostgreSQL, MongoDB, Redis, SQL, Database Migrations, Query Optimization

**Cloud & DevOps:** AWS, Docker, Kubernetes, CI/CD Pipelines, GitHub Actions, Terraform

**Monitoring & Tools:** Datadog, Sentry, Jest, Postman, Cursor, ChatGPT, Codex

**Workflow & PM:** Agile/Scrum, Jira, Code Reviews, Technical Mentorship, Cross-team Collaboration
