PROFESSIONAL SUMMARY

Full stack software engineer with seven years building research-driven platforms, ETL pipelines, and web applications for financial services. Skilled in Python, TypeScript, Java, and React across microservices on AWS with PostgreSQL, Redis, and Kafka. Partners with subject matter experts to deliver calculation APIs and intuitive interfaces while leading code reviews, test automation, and cross-team architecture in Agile environments.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered a **full stack portfolio analytics platform** serving 200+ internal users with React frontends and Python calculation APIs backed by PostgreSQL
- Built **ETL pipelines** processing daily market and holdings data through Kafka streams, reducing manual reconciliation effort by 40%
- Designed **microservice configurations** and deployment automations on AWS enabling zero-downtime releases across 12 production services
- Implemented a **Redis caching layer** for model calculation endpoints, cutting average API latency from 800ms to 120ms
- Led **software architecture reviews** with research and operations teams, standardizing API contracts and security patterns across greenfield initiatives
- Developed **TypeScript and React interfaces** for investment workflow tools, incorporating iterative user feedback through weekly MVP releases
- Established **TDD and BDD practices** within the engineering team, increasing unit test coverage from 45% to 82% over 18 months
- Mentored **three junior engineers** on full stack development, code review standards, and financial domain modeling conventions
- Automated **infrastructure and testing configurations** using Ansible and CI pipelines, reducing environment provisioning time from days to hours

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Engineered **Java and C# microservices** supporting trade lifecycle and risk reporting workflows for global banking operations
- Built **web applications** with JavaScript and AngularJS for internal compliance dashboards used by 500+ analysts across three regions
- Participated in **software architecture and design** sessions for a payments modernization initiative spanning 8 downstream systems
- Developed **PostgreSQL and SQL Server** data access layers with optimized queries reducing report generation time by 35%
- Implemented **security-focused automation** for credential rotation and access audits aligned with banking compliance requirements
- Collaborated with **Agile Scrum teams** to deliver MVPs for regulatory reporting tools with two-week iteration cycles
- Contributed to **Kafka-based event streaming** infrastructure enabling real-time position updates across distributed services

- Conducted **code reviews** and paired with summer analysts, reinforcing test-driven development and transparent problem-solving practices

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **JavaScript and Ruby web features** for a SaaS compliance platform, supporting RESTful APIs consumed by mobile and web clients
- Built **React components** for document review workflows, improving task completion rates through clearer UI state management
- Wrote **unit and integration tests** following TDD practices, catching regressions early in the development cycle
- Assisted in **PostgreSQL schema migrations** and query optimization for reporting modules handling 10K+ daily records
- Participated in **Agile sprint ceremonies** and collaborated with senior engineers on feature design and peer code reviews
- Implemented **API endpoint validations** and input sanitization to strengthen application security for client-facing modules

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** using HTML, CSS, and JavaScript for a nonprofit research portal supporting data visualization content
- Integrated **third-party APIs** to publish structured research datasets with consistent formatting across site sections
- Collaborated with **remote stakeholders** to gather requirements and iterate on layout and accessibility improvements
- Optimized **page load performance** through asset minification and lazy loading, improving Lighthouse scores by 25%

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, TypeScript, JavaScript, AngularJS, Vue.js, HTML5, CSS3

Backend: Python, Ruby, Java, C#, Node.js, REST APIs, Microservices

Databases: PostgreSQL, MongoDB, Redis, Microsoft SQL Server

Cloud & DevOps: AWS, Apache Kafka, Ansible, Serverless Architecture, CI/CD, ETL Pipelines

Monitoring & Tools: New Relic, ELK Stack, NumPy, Pandas, Git

Workflow & PM: Agile, Scrum, TDD, BDD, Code Reviews, MVP Iteration
