

Ryan Cho

Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with eight years delivering enterprise web services, distributed backends, and analytics applications in regulated financial environments. Expertise spans Java/Spring Boot microservices, REST integrations, AWS container platforms, and resilient MongoDB and relational data layers. Ships observable production systems using Docker, Kubernetes, Elasticsearch, and CI/CD while leading design across cross-functional Agile teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led architecture for **Spring Boot backend services** powering portfolio analytics and client reporting, exposing versioned REST APIs consumed by React and Angular front ends across three product teams
- Scaled **distributed Java services** on AWS Kubernetes clusters with rolling deployments, liveness probes, and pod autoscaling to maintain high-availability targets during market-hours traffic spikes
- Built **JMS-driven event pipelines** synchronizing position, cash, and reference data across downstream operational systems, decoupling producers from batch reconciliation consumers
- Managed **Amazon RDS PostgreSQL** and MongoDB schemas supporting mixed transactional and document-oriented access patterns for client holdings, pricing history, and audit snapshots
- Operated **Elasticsearch and Kibana** for centralized logging and operational search, reducing mean time to diagnosis during production incidents involving multi-service request traces
- Introduced **Docker-based CI environments** mirrored to EKS production topology, eliminating environment drift and shortening release validation cycles for eight-engineer squad
- Implemented **thread-safe concurrency patterns** in pricing and reconciliation engines processing parallel market data feeds without race conditions or duplicate settlement entries
- Mentored junior engineers on **Git workflow, Spring testing, and code review standards** while coordinating sprint delivery through JIRA-tracked Agile milestones and Confluence runbooks
- Partnered with product and compliance stakeholders to ship **audit-ready releases** with traceable deployment history, automated regression gates, and documented rollback procedures

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Engineered **Java and Spring Boot microservices** processing trade and reference data, serving REST consumers across front-office, custody, and risk reporting applications
- Designed **JMS messaging workflows** for asynchronous event propagation between settlement, reconciliation, and downstream analytics subsystems during end-of-day processing windows
- Optimized **multithreaded batch processors** handling high-volume market-close workloads, improving throughput for nightly jobs spanning thousands of instrument records
- Deployed containerized services to **AWS with Docker**, coordinating RDS-backed relational stores and MongoDB collections for hybrid persistence across operational domains
- Implemented **Elasticsearch indexing** for operational search dashboards, enabling analysts to query exception logs and audit trails across distributed service boundaries
- Hardened **API authentication and input validation** layers aligned with internal security standards for regulated financial data exchange and third-party integrations
- Partnered with QA and release managers on **Maven-driven CI pipelines** and Confluence-documented runbooks supporting controlled production cutovers and post-release verification

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **RESTful API endpoints** supporting mobile check-deposit workflows, reducing manual reconciliation steps for operations teams reviewing daily exception queues
- Built **JavaScript UI components** for internal admin dashboards surfacing transaction status, fraud flags, and exception handling queues used by support staff
- Wrote unit and integration tests around **service-layer business rules**, improving regression coverage before production releases to partner banking integrations
- Participated in **Agile sprint ceremonies** and peer code reviews, incorporating feedback on API contracts, error-handling patterns, and database query efficiency
- Containerized a **local development stack with Docker** to standardize dependencies and shorten onboarding time for intern and full-time engineers on shared services

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web interfaces** for foundation outreach programs using HTML5, CSS3, and JavaScript, improving content discoverability across donor and volunteer landing pages
- Implemented **CMS-backed publishing workflows** enabling non-technical staff to update program pages without developer intervention between campaign cycles
- Collaborated with stakeholders to translate **accessibility and usability requirements** into semantic markup and cross-browser layouts tested on major desktop and mobile clients
- Integrated **third-party form and analytics services** to track engagement metrics and streamline newsletter sign-ups tied to fundraising initiatives
- Maintained **version-controlled front-end assets in Git**, supporting iterative releases during a fast-paced nonprofit delivery schedule with peer review before deployment

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: JavaScript, React.js, AngularJS, HTML5, CSS3, responsive UI components, REST client integration

Backend: Java, Spring Framework, Spring Boot, multithreading, JMS, REST, Apache Tomcat, Node.js, open-source service integration

Databases: MongoDB, PostgreSQL, Amazon RDS, Elasticsearch, RDBMS schema design, high-availability data modeling

Cloud & DevOps: AWS (EC2, ECS, EKS, RDS), Docker, Kubernetes, Maven, Git, CI/CD pipelines, container orchestration

Monitoring & Tools: Elasticsearch, Kibana, application logging, health checks, distributed tracing, operational dashboards

Workflow & PM: Agile, Scrum, JIRA, Confluence, technical documentation, cross-team coordination, code review leadership
