

Ryan Cho

Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full-stack software engineer with 7+ years building web applications across finance and enterprise environments. Proficient in JavaScript, Python, Node.js, and Java with extensive SQL experience across complex multi-table datasets. Trusted technical decision-maker for API design, containerized deployments, and systems that handle sensitive data. Coaches engineers on architecture, automated testing, and CI/CD while partnering with cross-functional teams on scalable platform delivery.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led **full-stack delivery** of portfolio analytics web applications using **React**, **Node.js**, and **PostgreSQL**, supporting investment teams across 40+ concurrent users with sub-second report rendering.
- Designed and implemented **RESTful APIs** for trade reconciliation and reporting workflows, reducing manual data handoffs between front-office and operations teams through self-service dashboards.
- Architected **SQL query layers** across 15+ normalized tables for fund performance metrics, improving report generation time through indexed views and query plan tuning.
- Established **Docker and Kubernetes** deployment patterns for microservices, standardizing **CI/CD pipelines** that shortened release cycles and improved deployment reliability across staging and production.
- Served as **technical decision-maker** for framework and infrastructure choices, balancing short-term delivery needs with long-term maintainability alongside product and engineering leadership.
- Mentored **3 junior engineers** through code reviews, pairing sessions, and design discussions, raising team throughput and improving test coverage across critical payment and settlement modules.
- Built **automated test suites** spanning unit, integration, and API contract layers using Jest and pytest, catching regressions before production in systems processing sensitive financial data.
- Partnered with security and compliance stakeholders to implement **role-based access controls** and audit logging, aligning application behavior with data-handling requirements for regulated investment workflows.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full-stack features** for internal banking platforms using **Java**, **JavaScript**, and **SQL**, supporting cross-functional teams across risk, operations, and technology groups.
- Owned **API design and implementation** for trade capture and reference data services, enabling downstream systems to consume consistent payloads across multiple client applications.
- Optimized **complex multi-table SQL queries** spanning ledger, counterparty, and instrument datasets, improving batch processing windows for end-of-day reconciliation workflows.
- Containerized legacy services with **Docker** and contributed to early **Kubernetes** adoption, helping migrate workloads into a standardized cloud deployment model on AWS.
- Acted as **trusted technical lead** on sprint planning and solution design, weighing trade-offs between delivery speed, operational risk, and long-term platform evolution.
- Coached **2 incoming analysts** on codebase conventions, testing practices, and secure coding standards for systems handling regulated financial information.
- Implemented **automated integration tests** and pipeline gates within CI/CD workflows, reducing production defects tied to schema and API contract changes.
- Collaborated with business analysts and operations stakeholders to translate requirements into **scalable web application** enhancements delivered iteratively across quarterly release cycles.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **responsive web interfaces** with HTML, CSS, and JavaScript for customer-facing payment workflows, improving usability across desktop and mobile breakpoints.
- Contributed to **Node.js backend endpoints** supporting check deposit and verification features, following established API design patterns and input validation standards.
- Wrote **SQL queries** against transactional tables to power admin reporting views, helping operations teams track processing volume and exception rates.
- Participated in **automated test** development for core user flows, increasing confidence in releases through regression coverage of authentication and form submission paths.
- Supported **Docker-based** local development environments, enabling consistent setup across intern and full-time engineering contributors.
- Collaborated in **cross-functional Agile** ceremonies with product and design partners, translating mockups into implementable frontend components.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **HTML, CSS, and JavaScript** pages for nonprofit web properties, improving content layout consistency and accessibility across public-facing sites.
- Integrated lightweight **API consumers** to display dynamic program and event data sourced from backend services maintained by the foundation team.
- Performed **SQL-backed content updates** and validation checks against membership tables, ensuring published information matched internal records.
- Assisted with **cross-browser testing** and stylesheet refinements, resolving layout defects reported across Chrome, Firefox, and Safari.
- Coordinated with remote stakeholders to ship iterative website improvements within a focused two-month engagement timeline.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: HTML, CSS, JavaScript, React, responsive UI development, component-driven architecture

Backend: Node.js, Python, Java, REST API design, microservices, authentication and authorization

Databases: SQL, PostgreSQL, MySQL, multi-table query optimization, schema design, data modeling

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD pipelines, container orchestration, infrastructure automation

Monitoring & Tools: Jest, pytest, automated testing frameworks, logging, observability tooling, Git

Workflow & PM: Agile delivery, technical mentorship, cross-functional collaboration, sprint planning, code review
