

Ryan Cho

Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with five years building scalable, testable applications across finance and enterprise platforms. Experienced in TypeScript, React, Python, Node.js, and Java/Spring with SQL, NoSQL, and ETL data workflows on AWS and Azure using Docker and CI/CD pipelines. Champions automated testing, logging, and production monitoring in Agile teams. Partners with developers and stakeholders through pair programming, sprint ceremonies, and clear written communication.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **full-stack investment platform features** using TypeScript, React, and Node.js, enabling portfolio teams to manage workflows across **40+ active client accounts** with consistent sub-second page loads.
- Built **RESTful and event-driven backend services** in Python and Java/Spring that processed daily market data feeds, reducing manual reconciliation effort by **30%** through automated validation and retry logic.
- Designed **SQL and NoSQL data models** with optimized indexing and ETL pipelines that consolidated trading, reporting, and audit data into a unified analytics layer consumed by downstream dashboards.
- Containerized microservices with **Docker and CI/CD pipelines** on AWS, cutting deployment cycles from days to hours while maintaining zero-downtime releases across staging and production environments.
- Established **automated testing standards** spanning unit, integration, and end-to-end suites in Jest and PyTest, raising code coverage above **85%** and catching regressions before sprint completion.
- Integrated **LLM-assisted workflow tooling** with prompt orchestration and structured evaluation checks, helping analysts summarize research documents while preserving audit trails and human review gates.
- Implemented **centralized logging, metrics, and alerting** with CloudWatch and Datadog dashboards that surfaced latency spikes and error budgets, improving mean time to detection for production incidents.
- Mentored **two junior engineers** through pair programming and code reviews, aligning implementation patterns with team architecture guidelines and accelerating onboarding across React and backend service layers.
- Partnered with product, compliance, and operations stakeholders in **Agile sprint ceremonies** to refine backlog priorities, translate business requirements into technical designs, and deliver quarterly roadmap commitments on schedule.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full-stack internal banking applications** with React, TypeScript, and Java/Spring Boot, supporting trade operations teams across **12 regional desks** with role-based access and audit-compliant workflows.
- Engineered **C#/NET and Node.js integration services** that connected legacy core banking systems to modern APIs, enabling real-time position updates and reducing batch processing windows by **25%**.
- Built **SQL stored procedures and ETL jobs** that extracted, transformed, and loaded regulatory reporting datasets from heterogeneous sources into consolidated warehouse tables for daily compliance submissions.
- Deployed containerized services to **Azure and AWS environments** using Docker, Terraform, and Jenkins pipelines, standardizing release processes across three application teams.
- Authored **comprehensive automated test suites** with JUnit, Mockito, and Selenium that validated critical payment flows, preventing production defects during high-volume settlement periods.
- Configured **application monitoring and structured logging** across distributed services, giving on-call engineers actionable dashboards for throughput, error rates, and dependency health.

- Collaborated in **Agile squads** through daily standups, sprint planning, and retrospectives, consistently delivering committed story points while coordinating with QA and business analysts on acceptance criteria.
- Documented **API contracts and runbooks** for cross-team integrations, improving handoff clarity between frontend, backend, and infrastructure groups during platform modernization initiatives.
- Participated in **pair programming sessions** with senior developers to refactor monolithic modules into maintainable services, reducing cyclomatic complexity and improving code review turnaround time.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Contributed to **React and JavaScript frontend features** for a hospitality SaaS platform, implementing responsive UI components that improved mobile booking completion rates across pilot restaurant partners.
- Implemented **Node.js API endpoints** with Express and MongoDB that handled reservation and inventory updates, supporting concurrent requests during peak dining hours without data consistency issues.
- Wrote **unit and integration tests** with Mocha and Chai that covered authentication, payment hooks, and edge-case validation, helping the team maintain release confidence through weekly deploys.
- Assisted in **CI/CD pipeline configuration** on AWS CodePipeline, automating build, test, and deploy stages that reduced manual release steps for the engineering team.
- Collaborated with designers and product managers in **Agile sprints**, translating wireframes into accessible interfaces and participating in code reviews to align with team coding standards.
- Resolved **production bug tickets** by tracing errors through browser logs and server traces, documenting root causes and fixes that prevented recurrence across similar checkout flows.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive marketing and donation pages** with HTML, CSS, and JavaScript for a nonprofit foundation, ensuring cross-browser compatibility and accessible form submissions for online contributors.
- Integrated **third-party payment and email APIs** into the foundation website, enabling secure one-time and recurring donations with confirmation workflows routed to administrative staff.
- Optimized **page load performance** through asset minification, lazy loading, and image compression, improving Lighthouse performance scores and reducing bounce rates on campaign landing pages.
- Configured **Git-based version control workflows** and staging deployments, allowing the small engineering team to iterate quickly while preserving rollback capability for public-facing content.
- Partnered with nonprofit stakeholders to **translate content requirements** into maintainable web templates, delivering launch-ready pages within a compressed three-month engagement timeline.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: TypeScript, JavaScript, React.js, AngularJS, Vue.js, Next.js, Tailwind CSS, HTML5, CSS3, Responsive Design

Backend: Python, Node.js, Java, Spring Framework, C#, .NET, REST APIs, Microservices, Event-Driven Architecture

Databases: SQL, PostgreSQL, MySQL, NoSQL, MongoDB, Vector Databases, ETL Pipelines, Data Modeling, Query Optimization

Cloud & DevOps: Amazon Web Services, Microsoft Azure, Google Cloud Platform, Docker, CI/CD, Jenkins, Terraform, Container Orchestration

Monitoring & Tools: Automated Testing, Jest, PyTest, JUnit, Selenium, Logging, Datadog, CloudWatch, Git, Prompt Orchestration, LLM Evaluation Frameworks

Workflow & PM: Agile, Scrum, Sprint Planning, Pair Programming, Code Review, Technical Documentation, Stakeholder Communication, Cross-Functional Collaboration
