### PROFESSIONAL SUMMARY

---

Full stack engineer with 8+ years building scalable web platforms in banking and investment management. Skilled in Java/Spring Boot microservices, React frontends, REST integrations, and relational databases supporting high-volume financial workflows. Delivers secure, well-tested code through CI/CD pipelines while partnering with product and risk teams in Agile delivery.

### WORK EXPERIENCE

---

#### Software Engineer

May/2022 - May/2026

##### Aspen Capital

Remote | 10th Floor, New York

- Built **full stack lending and portfolio workflows** with Spring Boot and React, enabling analysts and investors to manage loan files, pricing inputs, and servicing updates through a unified platform.
- Designed **RESTful microservices** for document ingestion, underwriting support, and audit trails, decoupling high-volume transaction processing from legacy batch modules.
- Integrated external **credit and market data APIs** with schema validation and retry policies, improving reliability of downstream pricing and risk reporting pipelines.
- Optimized **PostgreSQL** queries, indexing, and connection pooling for large borrower datasets, reducing latency on portfolio and investor report generation.
- Expanded **unit, integration, and component test** coverage using JUnit, Mockito, and Jest across payment, settlement, and document routing services.
- Partnered with DevOps to strengthen **CI/CD pipelines** on AWS with Docker-based deployments, supporting rapid releases with automated smoke checks and rollback paths.
- Mentored junior engineers on **microservice design**, secure handling of financial and PII data, and code review practices aligned with regulated environments.
- Introduced **Kafka-based event notifications** for loan status and capital allocation updates, enabling downstream servicing and reporting consumers to react asynchronously.
- Led production troubleshooting for **API timeouts, database deadlocks, and deployment regressions**, coordinating with stakeholders to restore service reliability during peak processing windows.

#### Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

##### Summer Analyst,

##### BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java and Spring Boot services** supporting lending, trade finance, and internal banking workflows used by operations teams across North America.
- Built **REST and SOAP integrations** between core banking platforms and external credit, document management, and pricing systems for loan processing pipelines.
- Delivered responsive **Angular dashboards** for analysts monitoring application status, underwriting exceptions, and compliance checkpoints across borrower-facing workflows.
- Worked with **Oracle and SQL Server** schemas, stored procedures, and ORM mappings to process structured loan data alongside unstructured document attachments.
- Translated business requirements into **technical design documents** and API contracts during Agile delivery, collaborating with product owners and QA across multiple squads.
- Contributed to a **microservices migration** that extracted pricing and document routing logic from monolithic modules into independently deployable Spring Cloud services.
- Implemented **secure application development** practices including OAuth2 flows, input validation, encryption, and role-based access for sensitive financial records.

- Improved **test automation** with JUnit and Mockito for payment routing and file ingestion services, increasing confidence in nightly batch and on-demand processing jobs.
- Supported **production incident response** during high-volume processing windows, diagnosing integration failures and coordinating fixes with L2 support and vendor teams.

## Software Engineering Intern

Jun/2018 - May/2019

### Chexology

Remote | 17th Floor, New York

- Built **React components** for inventory tracking and checkout flows used by restaurant partners in production tablet environments.
- Developed **Node.js and Express REST endpoints** connecting mobile clients to MongoDB-backed catalog, order, and payment validation services.
- Collaborated on **Git-based development workflows**, pull request reviews, and deployment checklists supporting weekly feature releases.
- Added **unit tests** for payment validation and order state transitions, catching edge cases before QA handoff.
- Resolved cross-browser UI defects and **accessibility improvements** for responsive point-of-sale experiences on shared hardware.

## Web Developer

Sep/2017 - Nov/2017

### Bayesquare Foundation

Remote | New York

- Delivered **responsive campaign pages** for nonprofit fundraising initiatives using HTML, CSS, and JavaScript.
- Integrated **REST API calls** for donation form submission, email notification triggers, and lightweight analytics tracking.
- Maintained content templates and resolved **layout and performance issues** across mobile and desktop breakpoints.
- Partnered with stakeholders to iterate on **user experience** based on campaign feedback and engagement patterns.

## EDUCATION

---

### New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

## SKILLS

---

**Frontend:** React, Angular, TypeScript, JavaScript, HTML5, CSS3, Responsive UI

**Backend:** Java, Spring Boot, Spring Cloud, Node.js, Express, REST, SOAP, Microservices, Hibernate/JPA

**Databases:** PostgreSQL, Oracle, SQL Server, MongoDB, SQL, Schema Design

**Cloud & DevOps:** AWS, Docker, Kubernetes, CI/CD, Jenkins, GitHub Actions, Linux

**Monitoring & Tools:** Kafka, RabbitMQ, JUnit, Jest, Mockito, Git, Maven, Gradle, Postman

**Workflow & PM:** Agile/Scrum, SDLC, Jira, Confluence, Technical Design, Code Review, Stakeholder Collaboration
