PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building API-driven applications across capital markets and financial services. Experienced designing Java Spring Boot microservices, React interfaces, and data pipelines for high-volume lending and portfolio workflows. Strong track record translating business requirements into reliable, testable systems with CI/CD automation and cross-functional delivery in Agile environments.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **Java Spring Boot microservices** supporting loan origination and portfolio management workflows, enabling analysts to process structured and unstructured financial documents through unified REST APIs.
- Built **React-based borrower and internal dashboards** with responsive layouts and role-based access, improving task completion for underwriting and document review teams across distributed remote workflows.
- Designed **PostgreSQL data models** and Hibernate/JPA persistence layers for high-volume transaction processing, reducing query latency for recurring batch and real-time pricing operations.
- Integrated **third-party credit and document services** via secure REST integrations, standardizing authentication, retry policies, and audit logging for compliance-sensitive financial data exchange.
- Expanded **automated test coverage** across unit, integration, and component suites using JUnit and Mockito, increasing release confidence and reducing regression defects in core lending modules.
- Led **CI/CD pipeline enhancements** with Docker containerization and Jenkins/GitHub Actions workflows, accelerating deployment frequency while maintaining staging parity for production releases.
- Partnered with product and operations stakeholders to **translate business requirements** into technical specifications, facilitating architecture reviews for cloud-native, API-first platform initiatives.
- Optimized **API performance and scalability** through caching strategies, connection pooling, and asynchronous event processing, supporting peak load during month-end portfolio reconciliation cycles.
- Mentored junior engineers on **code review standards**, debugging practices, and secure development patterns, raising team throughput on cross-functional delivery milestones.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full stack features** for internal capital markets and lending support tools using Java, Spring Framework, and Angular, connecting front-office workflows to downstream servicing and reporting systems.
- Implemented **RESTful and SOAP APIs** for loan data exchange and pricing interfaces, enabling reliable integration between legacy banking platforms and modern microservice endpoints.
- Maintained **Oracle and SQL Server databases** supporting structured loan files and transaction records, authoring optimized queries and stored procedures for regulatory reporting deliverables.
- Contributed to **event-driven notification services** using message queues for asynchronous document processing and status updates across underwriting and operations teams.
- Participated in **Agile/Scrum ceremonies** and sprint planning, delivering incremental enhancements to analyst-facing applications with traceable requirements and peer-reviewed pull requests.
- Diagnosed and resolved **production incidents** affecting transaction processing pipelines, restoring uptime through root-cause analysis, hotfixes, and postmortem documentation.
- Enforced **secure application development** practices including input validation, encryption for data at rest, and role-based authorization aligned with financial data protection standards.

- Collaborated with business analysts to **analyze requirements** for digital transformation initiatives, prototyping UI flows and backend services for loan lifecycle stages from origination through servicing.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Supported development of **React and Node.js features** for check and payment management workflows, delivering responsive interfaces used by restaurant and hospitality clients.
- Assisted in building **REST API endpoints** connecting mobile and web clients to backend services, following REST conventions and JSON schema validation for transaction data.
- Wrote **unit and integration tests** for critical payment flows, improving reliability of deposit tracking and reconciliation features prior to production releases.
- Participated in **Git-based development workflows** including feature branches, pull requests, and code reviews under senior engineer mentorship during internship tenure.
- Debugged **frontend and backend defects** across development and staging environments, documenting reproduction steps and verifying fixes with QA stakeholders.
- Contributed to **PostgreSQL schema updates** and migration scripts supporting new client onboarding and reporting capabilities for internal operations teams.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** for nonprofit fundraising initiatives using HTML, CSS, and JavaScript, ensuring cross-browser compatibility for donor-facing experiences.
- Implemented **CMS-driven content updates** and form submissions, enabling non-technical staff to manage campaign information without developer intervention.
- Optimized **page load performance** through asset minification and image compression, improving accessibility for users on mobile and low-bandwidth connections.
- Collaborated with **foundation stakeholders** to gather requirements and iterate on site layout, delivering iterative updates within a short project timeline.
- Established **basic analytics tracking** for visitor engagement metrics, supporting leadership decisions on outreach and event promotion strategies.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Angular, JavaScript, TypeScript, HTML5, CSS3, Responsive UI Design

Backend: Java, Spring Boot, Spring Cloud, Spring Framework, Node.js, RESTful APIs, SOAP, Microservices, Hibernate/JPA

Databases: PostgreSQL, Oracle, SQL Server, Redis, MongoDB

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions), Git

Monitoring & Tools: JUnit, Mockito, SonarQube, Splunk, Postman, Swagger/OpenAPI

Workflow & PM: Agile/Scrum, SDLC, Jira, Confluence, Technical Design Reviews, Code Review
