PROFESSIONAL SUMMARY

Full stack software engineer with 8 years delivering secure financial platforms across capital markets and banking technology. Builds React borrower experiences, Java Spring Boot microservices, and PostgreSQL-backed APIs for lending workflows, underwriting pipelines, and high-volume transaction processing. Owns test automation, CI/CD delivery, production reliability, and cross-team architecture for cloud-native, API-first systems.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and maintained **full stack lending workflow applications** spanning React borrower portals and Java Spring Boot microservices for origination, pricing, and document intake across internal operations teams.
- Built **RESTful API integrations** connecting underwriting services, credit data providers, and document management systems, reducing manual handoffs across origination-to-closing pipelines.
- Designed **PostgreSQL schemas and Hibernate/JPA models** for structured loan files and unstructured document metadata, enabling reliable queries across portfolios exceeding 50K active records.
- Improved **unit and integration test coverage** across microservice boundaries using JUnit and Mockito, stabilizing weekly production releases and catching regressions before deployment.
- Optimized **high-volume transaction processing** through asynchronous job queues and connection pooling, lowering average API latency by 35% during peak origination windows.
- Partnered with product and compliance stakeholders to translate **business requirements into technical designs**, presenting architecture tradeoffs in cross-functional reviews with engineering and risk leadership.
- Supported **CI/CD pipelines on AWS** with Docker-based builds and automated smoke tests, enabling rapid, reliable deployments across staging and production environments.
- Led **production incident response and root-cause analysis** for servicing and payments modules, restoring uptime and implementing monitoring alerts that reduced repeat outages.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java Spring microservices** supporting trade finance and lending operations APIs consumed by internal platforms and third-party integration partners across global banking workflows.
- Implemented **React and Angular components** for analyst dashboards visualizing loan pipeline status, exception queues, and regulatory reporting datasets for technology operations teams.
- Integrated **REST and SOAP endpoints** with legacy core banking systems, enabling secure exchange of financial data while maintaining audit trails required for SOX compliance.
- Wrote **SQL Server and Oracle queries** optimized for batch reconciliation jobs processing millions of daily transactions across capital markets and lending back-office functions.
- Enhanced **application security controls** including role-based access, encryption at rest, and input validation aligned with enterprise data protection standards.
- Expanded **automated test suites** covering API contracts and service-layer logic, improving release confidence during Agile sprint cycles with cross-functional QA partners.
- Participated in **cloud-native architecture discussions** evaluating API-first platform patterns and event-driven messaging for decoupled loan processing services.
- Mentored **junior analysts on Git workflows, code review practices, and debugging techniques**, accelerating onboarding and raising team delivery consistency.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Contributed to **full stack feature development** using React frontends and Node.js services for a SaaS platform supporting operational workflow automation.
- Built **RESTful API endpoints** for document upload and status tracking, integrating with PostgreSQL persistence layers and validation middleware.
- Wrote **component and integration tests** with Jest and Cypress, improving frontend reliability across responsive borrower-facing interfaces.
- Collaborated in **Agile Scrum ceremonies** including sprint planning and retrospectives, delivering assigned stories within two-week iteration cycles.
- Resolved **production defects** through systematic debugging and log analysis, documenting fixes for team knowledge sharing.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** using HTML, CSS, and JavaScript for foundation outreach and program registration workflows.
- Integrated **third-party form APIs** to capture participant data and route submissions to internal review queues.
- Optimized **page load performance** through asset minification and lazy loading, improving mobile accessibility for community users.
- Partnered with stakeholders to refine **UI requirements** and deploy updates on a rapid iteration schedule during a short-term engagement.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Angular, JavaScript, TypeScript, HTML5, CSS3, Responsive UI Design, Component Testing

Backend: Java, Spring Boot, Spring Cloud, Node.js, RESTful APIs, SOAP, Microservices, Hibernate/JPA

Databases: PostgreSQL, Oracle, SQL Server, SQL Optimization, MongoDB

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions), Infrastructure as Code

Monitoring & Tools: Git, JUnit, Mockito, Jest, Cypress, Splunk, Prometheus, Grafana

Workflow & PM: Agile/Scrum, Jira, Confluence, SDLC, Code Review, Technical Design Documentation
