

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack engineer with seven years of experience delivering secure, accessible software in regulated financial environments. Builds end-to-end web applications—from user-centered interfaces to performant APIs—while championing automated testing, CI/CD, and lean-agile delivery. Mentors engineers on technical direction, data persistence patterns, and secure coding practices. Proven collaborator with cross-functional teams and client stakeholders in fully remote settings.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **end-to-end SaaS features** for portfolio and investor workflows using **React, TypeScript, Python, and FastAPI**, serving authenticated users across multi-tenant production environments.
- Built **accessible, responsive interfaces** following semantic HTML and keyboard-navigation standards, enabling compliance-minded teams to serve diverse user needs without sacrificing visual polish.
- Owned **API-first service design** for financial reporting modules, defining OpenAPI specifications, pagination contracts, and idempotent write patterns used by three downstream consumer teams.
- Hardened applications against **OWASP Top 10 vulnerabilities** through parameterized queries, secrets management, dependency scanning, and security-focused code reviews on sensitive account data paths.
- Established **automated testing strategy** spanning unit, integration, and contract tests in GitHub Actions, gating merges on coverage thresholds and smoke checks for deployment confidence.
- Provisioned cloud infrastructure with **Docker, Terraform, and AWS** services, standardizing staging and production parity for reliable releases and faster incident recovery.
- Mentored **four engineers** through design reviews, pairing sessions, and knowledge-sharing docs on data modeling, service decomposition, and observability practices.
- Collaborated with **product managers, designers, and client stakeholders** in a professional services model to translate ambiguous requirements into phased delivery roadmaps and measurable outcomes.
- Diagnosed **performance and reliability issues** across distributed services using structured logging and metrics dashboards, reducing p95 latency on key read endpoints through caching and query refinement.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Engineered **full stack trading and reporting tools** for internal banking teams using Java, Spring Boot, and Angular, processing high-volume financial datasets with strict uptime requirements.
- Built **secure REST and messaging interfaces** for downstream risk and compliance systems, applying encryption, least-privilege access, and audit trails for regulated data exchange.
- Drove **CI/CD pipeline improvements** with Jenkins and automated test suites, shortening release cycles for critical internal services while preserving deployment rollback safety.
- Partnered with **cross-functional analysts, QA, and business stakeholders** to document technical designs, data flows, and operational runbooks for production support handoffs.
- Optimized **SQL query performance** and data persistence layers across Oracle and PostgreSQL, resolving bottlenecks affecting daily batch reconciliation jobs.
- Mentored **incoming summer analysts** on version control standards, code review practices, and secure coding patterns during onboarding rotations.
- Identified **technical debt** in legacy batch processors and proposed incremental modernization plans adopted by the technology leadership group.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **full stack features** for a restaurant inventory SaaS product using React, Express, and PostgreSQL, supporting real-time tracking for 50+ client locations.
- Authored **unit and integration tests** with Jest and Supertest, increasing automated coverage on payment and order APIs ahead of production releases.
- Designed **API contracts** and lightweight service documentation to align mobile and web clients on shared data models and authentication flows.
- Participated in **Agile sprint ceremonies** and paired with senior engineers to refactor legacy modules, cutting average API response latency on list endpoints.
- Containerized local development stacks with **Docker** to standardize onboarding and reduce environment setup time for incoming interns.
- Implemented **role-based access controls** and audit logging for sensitive operational data handled by hospitality clients.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Led **end-to-end delivery** of a responsive nonprofit web platform using React and Node.js, improving volunteer registration completion rates across mobile and desktop sessions.
- Implemented **WCAG-aligned form components** and navigation patterns so content remained usable for assistive technology users during site relaunch.
- Built **RESTful APIs** with input validation and structured error responses to support secure submission of donor and event data.
- Established **Git-based version control** workflows and peer code reviews with a distributed team to maintain release quality across weekly deploys.
- Collaborated with designers and stakeholders to translate wireframes into **reusable UI modules**, reducing duplicate markup across 12+ public pages.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, Angular, HTML5, CSS3, Responsive Design, Accessibility (WCAG/Section 508)

Backend: Python, FastAPI, Node.js, Express, Java, Spring Boot, REST APIs, OpenAPI

Databases: PostgreSQL, Oracle, Redis, SQL, Data Modeling, ETL Pipelines

Cloud & DevOps: AWS, Docker, Terraform, GitHub Actions, Jenkins, CI/CD, Infrastructure as Code

Monitoring & Tools: Datadog, Grafana, Structured Logging, Git, Jest, Supertest, SonarQube

Workflow & PM: Agile, Lean, Jira, Confluence, Technical Design Documentation, Mentorship, Cross-functional Collaboration
