

Ryan Cho

Full-Stack Platform Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full-stack engineer with 8+ years delivering secure, data-intensive platforms in finance and enterprise SaaS. Builds React analytics interfaces, Node.js and Python services, SQL-backed pipelines, and AWS infrastructure using Terraform. Integrates LLM-assisted review flows, predictive modeling, and observability into production releases. Collaborates with analysts and product leads to ship validated data tools, authentication controls, and audit-ready compliance patterns.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led development of **React-based analytics dashboards** and data review interfaces for portfolio and operations teams, replacing manual spreadsheet workflows with **interactive visualizations** built using D3.js and Recharts.
- Architected **Node.js/Express** and **Python Flask** REST services supporting high-volume trading and holdings workflows, implementing **JWT authentication**, **RBAC authorization**, and OWASP-aligned validation across public and internal endpoints.
- Built **Python data pipelines** with pandas, NumPy, and PySpark to ingest, validate, and transform multi-source financial datasets, consolidating upstream feeds into governed staging layers with repeatable **data quality checks**.
- Designed advanced **SQL models** and reporting queries powering portfolio analytics, edit checks, and exception dashboards that surfaced schema drift, missing values, and reconciliation gaps before downstream close processes.
- Integrated **LLM API workflows** with structured prompt templates and retrieval-augmented context for document classification and anomaly triage, enabling analysts to review unstructured filings with guided, auditable suggestions.
- Established **CI/CD pipelines** in GitHub Actions with SAST, dependency SCA, container scanning, and signed Docker images deployed to **Kubernetes** clusters with runtime security and policy-as-code guardrails.
- Provisioned **AWS infrastructure** with Terraform across VPC-isolated environments, configuring IAM least privilege, encryption in transit and at rest, secrets management, and WAF protections for customer-facing services.
- Partnered with security and compliance stakeholders to implement **audit logging**, threat modeling reviews, and vulnerability remediation workflows aligned with SOC 2 controls and internal risk management standards.
- Mentored engineers on **full-stack delivery patterns**, data validation design, and secure API development while facilitating sprint planning and cross-functional demos with product, analytics, and executive stakeholders.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **React and JavaScript** interfaces for internal risk and reporting tools used by trading and operations teams, improving usability of complex datasets through responsive layouts and **data visualization** components.
- Developed **Node.js and Python** RESTful services integrating legacy banking systems with modern APIs, applying JWT session handling, **RBAC controls**, and centralized error handling for regulated workflows.
- Authored advanced **SQL queries** and stored procedures supporting regulatory reporting, reconciliation dashboards, and ad hoc analysis across large transactional datasets with performance tuning for batch windows.
- Implemented **ETL pipelines** using Python, pandas, and scheduled jobs to extract, transform, and load market and client data into analytics stores while enforcing validation rules and lineage documentation.
- Contributed to **CI/CD automation** with GitLab pipelines incorporating unit tests, static analysis, and artifact promotion across development, staging, and production environments for critical internal applications.
- Supported **cloud migration initiatives** on AWS by containerizing services with Docker, defining infrastructure modules, and collaborating on VPC networking, encryption standards, and secrets rotation practices.

- Collaborated with business analysts and compliance partners during **usability testing** and release reviews, translating audit findings into prioritized remediation backlogs and developer-ready acceptance criteria.
- Documented system architectures, API contracts, and operational runbooks to strengthen **change management**, onboarding, and cross-team knowledge transfer across globally distributed engineering groups.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React components** and form workflows for a hospitality SaaS product, improving checkout and account management flows through reusable UI patterns and consistent client-side validation.
- Implemented **Node.js/Express** endpoints and REST integrations connecting mobile and web clients to backend services, following OWASP input sanitization and structured logging conventions.
- Created **SQL-backed reporting views** and lightweight dashboards that helped operations teams monitor transaction activity and customer support metrics during weekly release cycles.
- Participated in **code reviews**, Git-based branching workflows, and automated test runs within a continuous integration pipeline shared by the engineering team.
- Partnered with designers and product owners to refine requirements, prototype interface changes, and incorporate **usability feedback** from pilot restaurant partners.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed responsive **JavaScript and HTML/CSS** pages for a nonprofit web presence, ensuring accessible layouts and cross-browser compatibility for fundraising and program content.
- Integrated lightweight **REST API** calls and form handlers to capture donor inquiries and event registrations with basic server-side validation.
- Configured deployment scripts and version control workflows in **Git**, enabling repeatable updates and rollback support for site content changes.
- Collaborated with foundation stakeholders to translate editorial requirements into **maintainable templates** and reusable front-end components.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript (ES6+), D3.js, Recharts, HTML5, CSS3, Responsive UI, Data Visualization

Backend: Node.js, Express, Python, Flask, RESTful APIs, JWT, RBAC, OWASP Secure Coding, scikit-learn

Databases: SQL, PostgreSQL, Advanced Query Design, Schema Validation, Data Modeling

Cloud & DevOps: AWS, Terraform, VPC, IAM, WAF, Docker, Kubernetes, GitHub Actions, GitLab CI, DevSecOps

Monitoring & Tools: Prometheus, Grafana, Elasticsearch, SIEM Integration, SAST/SCA, Audit Logging

Workflow & PM: Agile/Scrum, Jira, Cross-functional Collaboration, Technical Documentation, Usability Testing
