

Ryan Cho

Senior Software Engineer — Web Performance & Platform Systems

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> ·
<https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Senior software engineer with 8+ years delivering consumer-facing web applications and the Python services that power them. Drives measurable performance wins through React profiling, production instrumentation, regression detection, and cross-team execution. Raises engineering standards via mentoring, design documentation, and practical AI-assisted workflows that accelerate root-cause analysis and safe refactoring.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned **end-to-end performance improvement** for a consumer portfolio web platform used by 120K+ monthly active users, reducing p95 page load time by 38% through React profiling, bundle optimization, and backend query tuning.
- Built **production RUM instrumentation** and regression dashboards wired into CI/CD, enabling teams to catch performance regressions within 24 hours of merge.
- Profiled high-traffic **React surfaces** with flame graphs, Chrome DevTools, and distributed traces to prioritize fixes that improved Time to Interactive by 420ms on critical user flows.
- Partnered with mobile platform owners to define **cross-surface measurement standards** and align web performance SLAs with native client telemetry across iOS and Android wrappers.
- Shipped **Python and Go service optimizations** that cut API latency for client-facing endpoints by 31%, improving perceived responsiveness across web and mobile experiences.
- Authored design docs and led cross-team reviews that influenced **product roadmap prioritization**, treating performance as a first-class customer attribute rather than a late-stage fix.
- Established **AI-assisted engineering workflows** for profiling analysis and targeted refactoring, raising team throughput on performance fixes by 25% while documenting guardrails for safe adoption.
- Mentored four IC engineers on **measurement methodology**, root-cause analysis, and performance-aware architecture through code reviews, pairing sessions, and internal tech talks.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **internal analytics dashboards** in React and JavaScript used by 200+ operations staff, shortening reporting cycles from hours to minutes on daily trade workflows.
- Optimized **Python microservices** supporting settlement pipelines, reducing batch processing windows by 22% through query refactoring, connection pooling, and targeted caching.
- Implemented **API instrumentation and logging standards** adopted across three engineering squads, accelerating incident root-cause analysis during production latency events.
- Delivered **web application enhancements** with product and compliance stakeholders, shipping regulatory reporting features on aggressive timelines without sacrificing release quality.
- Contributed to **CI/CD pipeline improvements** that added automated regression coverage for frontend and backend releases, reducing manual verification effort before production deploys.
- Supported production on-call rotation, diagnosing latency spikes in **distributed services** using traces, structured logs, and coordinated rollback decisions with platform owners.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React components** for a restaurant management web app, improving order workflow responsiveness for venue staff during peak service periods.

- Integrated **REST APIs** with frontend state management, reducing duplicate network calls through caching and request deduplication on high-frequency screens.
- Participated in code reviews and sprint planning, shipping features across the **JavaScript stack** with consistent test coverage and mentor-guided design feedback.
- Refactored legacy **JavaScript modules** to improve maintainability and trim bundle size for mobile web clients accessed on tablets in busy kitchen environments.
- Wrote unit tests and internal documentation supporting **continuous integration** practices and smoother handoffs between intern and full-time engineering contributors.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** using HTML, CSS, and JavaScript for a nonprofit digital presence serving regional program audiences.
- Implemented **cross-browser compatibility** fixes ensuring consistent layout and interaction behavior across desktop and mobile browsers.
- Collaborated with stakeholders to translate **content requirements** into accessible, standards-compliant web layouts ready for public launch.
- Maintained site assets and applied **front-end performance techniques** including image optimization and asset minification to improve page load speed.
- Supported deployment workflows and **version control** practices with Git for iterative content updates and reviewable release history.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: JavaScript, TypeScript, React.js, HTML5, CSS3, Web Performance, Profiling, Flame Graphs, Bundle Optimization, Responsive UI

Backend: Python, Go, Node.js, REST APIs, Microservices, API Design

Databases: PostgreSQL, Redis, MongoDB, SQL, Query Optimization

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, GitHub Actions, Automated Regression Testing

Monitoring & Tools: RUM Telemetry, Chrome DevTools, Datadog, Grafana, OpenTelemetry, Distributed Tracing

Workflow & PM: Agile, Design Documentation, Cross-Team Roadmap Influence, Mentorship, Root Cause Analysis, AI-Assisted Engineering Workflows
