PROFESSIONAL SUMMARY

Full stack engineer with 8+ years delivering secure, scalable applications in regulated financial environments. Expert in Java/Spring Boot and TypeScript/Angular with hands-on CI/CD, PostgreSQL tuning, and AWS operations. Led workflow platform work serving 500+ users while establishing observability with New Relic and Splunk for audit-ready production systems.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and maintained **Spring Boot microservices** on **AWS** supporting investment workflow automation used daily by **400+ analysts** across distributed remote teams.
- Built **TypeScript/Angular** dashboards for case review and lead-tracking workflows, improving investigator throughput by streamlining navigation and reducing repetitive manual steps.
- Owned **Jenkins CI/CD pipelines** with automated **unit and integration test** gates, enabling biweekly releases while cutting production rollback incidents across core services.
- Tuned **PostgreSQL queries and indexes** for high-volume transaction reporting, resolving **slow-query bottlenecks** that had degraded batch processing during month-end close cycles.
- Instrumented production services with **New Relic** and **Splunk** dashboards and alerts, giving on-call teams minute-level detection of anomalies and **audit-ready** operational logs.
- Partnered with compliance stakeholders to embed **regulatory controls** into application workflows, ensuring traceable decision paths for sensitive financial operations and policy changes.
- Mentored **three junior engineers** on test automation standards, secure API design, and code review practices across **remote-first** product squads.
- Integrated **ML-assisted classification** helpers into document triage flows, improving initial routing accuracy while preserving human review gates for high-risk decisions.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **Java enterprise applications** supporting trading and operations teams on internal platforms serving **1,000+ users** across global locations.
- Developed **Angular** front-end modules for operational dashboards, replacing legacy views and improving data clarity for **risk and compliance** reviewers.
- Implemented **unit test automation** suites integrated into **Jenkins** pipelines, raising coverage on core services and reducing regression defects in quarterly releases.
- Optimized **SQL access patterns** against **relational databases**, applying **performance tuning** techniques that shortened report generation for daily reconciliation jobs.
- Configured **CloudWatch** and **Splunk monitoring** for batch and API workloads, giving operations teams actionable visibility into failures and latency trends.
- Collaborated with auditors and business analysts to refine **workflow escalation** steps, ensuring systems reflected policy updates without disrupting peak processing windows.
- Supported **AWS migration** initiatives for select internal tools, containerizing services and aligning deployment practices with bank security standards.
- Facilitated cross-team design sessions to clarify requirements and **decision-making checkpoints**, translating regulatory needs into implementable user stories.

- Contributed to **continuous delivery** improvements by standardizing build artifacts and environment promotion paths across multiple development streams.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **TypeScript** features in an **Angular** web application used by restaurant partners to digitize compliance checklists and service workflows.
- Authored **unit tests** for REST client modules and form validation logic, helping the team catch regressions before biweekly releases.
- Assisted in configuring **CI jobs** that automated linting and test execution, improving feedback loops for a **remote engineering team**.
- Refactored shared UI components to improve **usability** and consistency across customer-facing screens viewed by **100+ daily active users**.
- Documented API integration patterns and onboarding guides that shortened ramp-up time for subsequent interns joining the codebase.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built responsive **web pages** for a nonprofit education portal using HTML, CSS, and JavaScript, supporting content updates for remote program coordinators.
- Integrated lightweight **form workflows** that streamlined volunteer sign-ups and improved data capture for community outreach campaigns.
- Collaborated with stakeholders to clarify content requirements and deliver iterative releases within a fast-paced **remote schedule**.
- Established basic **unit tests** for client-side validation logic, reducing manual QA cycles before each deployment.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: TypeScript, Angular, AngularJS, HTML5, CSS3, JavaScript, Responsive UI, Usability-focused Design

Backend: Java, Spring Boot, REST APIs, Microservices, Unit Testing, Integration Testing

Databases: PostgreSQL, SQL, Relational Databases, Query Optimization, Performance Tuning, Schema Design

Cloud & DevOps: AWS, Jenkins, CI/CD, Continuous Delivery, Docker, Cloud Computing

Monitoring & Tools: New Relic, Splunk, CloudWatch, Git, Agile/Scrum

Workflow & PM: Cross-functional Collaboration, Stakeholder Communication, Technical Mentorship, Service Design, Regulatory Compliance Workflows
