

Ryan Cho

Senior Full Stack Software Engineer | React, TypeScript & Python

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building React and TypeScript applications, analytics dashboards, and API-driven SaaS platforms across finance and investments. Owns end-to-end feature delivery from UX and reusable components through Python services and GraphQL integrations while partnering with product and design on complex, data-rich workflows. Passionate about observability, production debugging, and applying emerging AI techniques to scalable user-facing systems.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led development of **investment analytics dashboards** in React and TypeScript, delivering portfolio performance, exposure, and allocation views used daily by research and operations teams across multiple fund strategies.
- Architected a **reusable component library** for charts, data grids, and form workflows, standardizing UI patterns across four product surfaces and reducing duplicate frontend implementation effort.
- Built **GraphQL API integrations** connecting React applications to Python microservices, improving data-fetch efficiency and simplifying domain models for complex investment workflows.
- Designed **interactive data visualization** modules for real-time portfolio monitoring, enabling stakeholders to interpret shifting market conditions through responsive, filterable chart experiences.
- Partnered with product and design to drive **product ownership** from discovery through release, translating business requirements into scalable UX patterns for regulated financial workflows.
- Implemented **Python backend services** for analytics computations, scheduled reporting, and on-demand queries over large investment datasets with consistent API contracts.
- Led **architectural reviews** for new platform features with backend and infrastructure teams, aligning frontend state management, caching, and service boundaries before implementation.
- Mentored **three engineers** on React performance, TypeScript patterns, and testing practices, strengthening code review quality and release confidence across the frontend codebase.
- Established **production debugging workflows** with structured logging and error tracking, accelerating root-cause analysis for UI defects in a high-volume SaaS environment.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **user-facing banking applications** in React and TypeScript for operations and technology teams supporting global markets and payments workflows.
- Built **data visualization tooling** for transaction monitoring and compliance reporting, helping analysts interpret high-volume payment flows through interactive dashboards.
- Developed **REST and GraphQL integrations** with enterprise services, enabling secure data exchange between frontend modules and core banking platforms.
- Collaborated with **cross-functional stakeholders** including business analysts and infrastructure teams to translate regulatory requirements into actionable technical specifications.
- Optimized **frontend performance** for data-dense grid interfaces using virtualization and memoization, maintaining responsiveness when rendering large record sets.
- Contributed **Python automation** for workflow validation and batch processing, reducing manual verification effort during recurring release cycles.
- Participated in **architectural design sessions** for platform modernization initiatives, providing frontend perspective on API contracts and modular service boundaries.

- Supported **production debugging** of distributed systems in team environments, documenting incident patterns and preventive fixes for recurring failure modes.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React features** for a customer-facing web application, implementing responsive UI components aligned with the team design system and accessibility guidelines.
- Integrated **REST APIs** with frontend state management, handling authentication flows, pagination, and error states for reliable end-user experiences.
- Wrote **unit and integration tests** for checkout and account management paths, improving coverage on business-critical user journeys.
- Collaborated with **senior engineers** in code reviews, applying feedback on TypeScript typing, component composition, and maintainable module structure.
- Assisted with **performance profiling** of page renders, identifying unnecessary re-renders and applying targeted optimizations to key interaction flows.
- Documented **API contracts and component usage** for internal reference, supporting faster onboarding for new contributors joining the codebase.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** with HTML, CSS, and JavaScript for foundation marketing content and program information across desktop and mobile viewports.
- Implemented **CMS-driven layouts** enabling non-technical staff to publish updates without developer support during an accelerated launch timeline.
- Optimized **page load performance** through asset compression and lazy loading, improving mobile experience for primary site visitors.
- Ensured **cross-browser compatibility** and baseline accessibility across core templates used for public-facing foundation pages.
- Coordinated with **stakeholders** to gather requirements and iterate on site structure, balancing design goals with maintainable front-end implementation.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, TypeScript, JavaScript, HTML5, CSS3, Redux, Data Visualization, D3.js, Responsive UI, Component Architecture

Backend: Python, Node.js, GraphQL, REST APIs, Microservices, Go

Databases: PostgreSQL, MongoDB, Redis, SQL

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, GitHub Actions

Monitoring & Tools: Datadog, Sentry, Grafana, Jest, Cypress, Webpack, Git

Workflow & PM: Agile/Scrum, Jira, Product Ownership, Technical Documentation, Code Review, Cross-functional Collaboration
