PROFESSIONAL SUMMARY

Full stack engineer with 8+ years building distributed backend services and cross-platform client experiences in TypeScript, React, Java, and Kotlin. Delivered real-time, high-availability features across web and mobile while partnering with product and design. Architect scalable APIs, drive A/B experimentation velocity, and use AI-assisted workflows to accelerate quality. Focused on performance, accessibility, and maintainable systems at scale.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and shipped **end-to-end product features** spanning REST and GraphQL APIs, event-driven backend services, and React web clients serving 50K+ monthly active users
- Built **real-time notification and presence systems** using WebSockets and pub/sub messaging, reducing perceived latency for collaborative workflows from seconds to sub-200ms
- Led **cross-platform UI implementation** across web and mobile web surfaces with TypeScript and React, establishing shared component libraries adopted by 3 product teams
- Designed **high-availability microservices** in Java and Kotlin with circuit breakers and graceful degradation, achieving 99.9% uptime for mission-critical portfolio APIs
- Partnered with product and experience design to define **technical roadmaps** for greenfield features, translating ambiguous requirements into phased delivery plans
- Drove **A/B experimentation infrastructure** integration, enabling product teams to launch and measure variant tests across client surfaces without redeploying core services
- Championed **accessibility standards (WCAG 2.1)** across client codebases, auditing 40+ screens and resolving critical issues for inclusive user experiences
- Mentored 4 engineers through **code review, design sessions, and documentation**, elevating team test coverage and reducing production incidents by 35% year-over-year
- Leveraged **AI-assisted engineering tools** to accelerate prototyping, test generation, and documentation while maintaining rigorous validation of generated outputs

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **distributed trading and analytics services** in Java serving institutional clients, handling peak loads of 10K+ concurrent requests with horizontal scaling
- Built **React and TypeScript dashboards** for risk analysts, replacing legacy UI workflows and cutting report generation time from hours to minutes
- Implemented **real-time market data pipelines** integrating Kafka and REST feeds, enabling sub-second refresh rates for front-office decision tools
- Architected **API gateway integrations** improving observability and reducing cross-team integration cycles by 40% across downstream consumer services
- Collaborated with **cross-functional stakeholders** across compliance, product, and operations to ship regulated features with complete audit trails
- Optimized **database query performance** across PostgreSQL and Oracle schemas, reducing p95 latency on critical read paths by 60%
- Drove **high-availability failover design** for batch and streaming jobs, eliminating single points of failure in nightly reconciliation workflows

- Produced **technical documentation and runbooks** adopted by 3 downstream teams, shortening onboarding time for new engineers by several weeks

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Shipped **React and JavaScript features** for mobile web check-in workflows, improving completion rates for hospitality partner onboarding
- Integrated **REST APIs** with client state management, enabling real-time status updates across venue management dashboards
- Built **responsive UI components** tested across iOS Safari and Android Chrome, ensuring consistent experience design across devices
- Wrote **unit and integration tests** with Jest, contributing to CI pipelines that caught regressions before production releases
- Documented **API contracts and component usage** for peer developers, reducing handoff friction during team transitions

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **static and dynamic web pages** using HTML, CSS, and JavaScript for nonprofit fundraising campaigns
- Implemented **form validation and analytics hooks** improving donor conversion tracking for marketing teams
- Optimized **page load performance** through asset minification and lazy loading, reducing time-to-interactive on key landing pages
- Collaborated with stakeholders to translate **content requirements** into accessible, mobile-friendly layouts

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: JavaScript, TypeScript, React.js, HTML5, CSS3, Mobile Web, Responsive UI, WCAG Accessibility, Swift, Cross-Platform UI

Backend: Java, Kotlin, Node.js, REST APIs, GraphQL, Microservices, Event-Driven Architecture, WebSockets, Real-Time Systems

Databases: PostgreSQL, Oracle, Redis, MongoDB

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Terraform, Infrastructure as Code

Monitoring & Tools: Datadog, Grafana, Apache Kafka, Git, Jest, Playwright, AI-Assisted Development Tools

Workflow & PM: Agile/Scrum, A/B Testing, Technical Documentation, Cross-Functional Collaboration, Roadmapping, Product Innovation
