PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building production web and mobile applications across finance and capital markets. Experienced in native Android development with Kotlin and Java, REST API integrations, and MySQL-backed services. Delivers scalable MVVM architectures, cross-platform features, and clean database designs while mentoring engineers and partnering with product and operations teams in fast-paced remote environments.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led design and delivery of **native Android modules** using Kotlin, Java, and MVVM patterns in Android Studio, supporting portfolio analytics workflows for distributed investment teams.
- Built and maintained **RESTful API integrations** with JSON and GSON serialization, enabling reliable sync between mobile clients and backend services in production trading environments.
- Architected **MySQL database schemas** and query layers for transaction reporting features, strengthening data integrity and retrieval consistency across reporting pipelines.
- Developed complementary **full stack web features** with Django and Vue.js, including dashboard components that surfaced fund performance metrics to operations stakeholders.
- Provided **technical guidance and code reviews** for engineers on Android lifecycle patterns, API error handling, and Git branching practices, improving release stability across the team.
- Implemented **WebSocket-based notifications** for portfolio alert delivery, allowing mobile and web clients to receive operational updates with lower polling overhead.
- Containerized application services with **Docker and Kubernetes** configurations and supported Azure DevOps CI/CD pipelines that automated builds, tests, and staged deployments.
- Partnered with product and capital markets stakeholders to translate operational requirements into **shippable Android and web capabilities** within aggressive sprint timelines.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Engineered **Java and Kotlin Android utilities** and internal web tooling that streamlined trade operations workflows for analysts across global markets desks.
- Designed **REST API clients** with JSON payloads and structured GSON mapping to integrate front-office applications with pricing, risk, and settlement services.
- Built **MySQL-backed reporting modules** that aggregated transaction and position data for technology analyst teams, supporting daily operational reviews.
- Collaborated with cross-functional technology and business units to deliver **full stack enhancements** under tight regulatory deadlines in a remote-first environment.
- Maintained **version-controlled codebases in Git**, owning pull request reviews and release documentation for recurring platform upgrades.
- Mentored incoming technology analysts on **Android Studio debugging**, API integration patterns, and database normalization practices.
- Resolved production defects in **distributed banking systems**, restoring service availability for client-facing tools used by front-office teams.

Software Engineering Intern Chexology

Jun/2018 - May/2019

Remote | 17th Floor, New York

- Contributed to **full stack product features** by implementing Vue.js views and Django REST endpoints that supported restaurant operations workflows.
- Integrated mobile-responsive interfaces with **JSON-based REST APIs**, ensuring consistent data contracts between web clients and backend services.
- Assisted in **MySQL schema updates** and migration scripts for menu and order management tables used across staging and production environments.
- Participated in **Git-based code reviews** and feature branches, following team standards for testing, documentation, and deployment hygiene.
- Supported debugging of **Android prototype screens** written in Java with MVVM separation, validating API responses against backend fixtures.
- Documented API usage and onboarding steps that helped new engineers ramp on **independent remote collaboration** within a fast-paced startup team.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** for a nonprofit foundation site, improving content discoverability and donor engagement across desktop and mobile browsers.
- Connected front-end components to **REST endpoints** returning JSON data, enabling dynamic listings for programs and community resources.
- Performed **MySQL query tuning** and schema adjustments that reduced load delays on frequently accessed content sections.
- Used **Git workflows** to manage feature branches, track issues, and collaborate with a distributed volunteer engineering group.
- Collaborated with stakeholders to ship **iterative web improvements** on a short contract timeline while working fully remote from New York.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: Vue.js, JavaScript, HTML5, CSS3, Android UI, MVVM, Material Design

Backend: Django, Python, Java, Kotlin, REST APIs, GSON, WebSockets

Databases: MySQL, SQL, schema design, query optimization, data modeling

Cloud & DevOps: Kubernetes, Azure DevOps, Docker, CI/CD, container orchestration

Monitoring & Tools: Android Studio, Git, Postman, Gradle, logging and debugging tooling

Workflow & PM: Agile/Scrum, Jira, cross-functional collaboration, technical mentorship, independent delivery
