PROFESSIONAL SUMMARY

Senior .NET full stack developer with 8+ years designing scalable web applications, RESTful APIs, and microservices across financial services and investment platforms. Proficient in C#, ASP.NET Core, and cloud deployment on AWS and Azure with strong focus on security, performance tuning, and cross-functional delivery with design and QA teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and maintained **ASP.NET Core microservices** supporting portfolio analytics workflows used by investment teams across multiple fund strategies
- Built **RESTful APIs** with C# and Entity Framework, reducing data retrieval latency through query optimization and **Redis caching** on high-traffic endpoints serving 12K+ daily requests
- Deployed and managed application workloads on **AWS (ECS, Lambda, RDS)** with infrastructure-as-code pipelines, improving release reliability across 30+ production deployments per quarter
- Partnered with **UI/UX designers** to deliver responsive React and Blazor interfaces aligned with design systems, shortening design-to-release cycles for quarterly product updates
- Led **code reviews** and debugging sessions for a team of five engineers, establishing shared standards for API versioning, error handling, and observability
- Integrated **third-party market data and payment APIs** with retry logic and circuit breakers, maintaining 99.9% uptime during vendor outages and rate-limit events
- Hardened application **security** through OAuth 2.0, role-based access controls, and input validation, supporting internal compliance audits without critical findings
- Optimized **SQL Server** stored procedures and API batching patterns, cutting nightly reconciliation runtimes by roughly 35% across reporting pipelines

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **.NET web applications** for trade operations and risk reporting, serving 200+ internal users across front-office and middle-office teams in a regulated banking environment
- Implemented **RESTful microservices** in C# to expose legacy mainframe data, enabling downstream teams to consume standardized JSON contracts instead of overnight batch file exchanges
- Supported **Azure App Service** and **AWS** migration initiatives for internal tooling, containerizing 15+ services and validating deployment topologies with platform engineering
- Collaborated with **QA engineers** on automated test suites using xUnit and Selenium, increasing regression coverage for critical payment and settlement workflows spanning 40+ test scenarios
- Performed **performance profiling** on high-volume API endpoints, identifying N+1 query patterns and reducing average response times by 40% through indexing and pagination
- Integrated external **credit rating and reference data APIs** with robust logging and fallback handling, improving data freshness for daily risk dashboards used by three business units
- Contributed to **security reviews** and secure coding practices for PCI-adjacent systems, remediating vulnerabilities identified in static analysis and penetration test cycles
- Mentored **incoming technology analysts** on .NET conventions, Git workflows, and REST design, accelerating onboarding for analyst cohorts joining the engineering rotation program

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **full stack features** with ASP.NET MVC and JavaScript for a restaurant inventory platform, delivering CRUD workflows used by pilot customers during the beta program
- Developed **REST endpoints** for menu and supplier data with C#, enabling mobile clients to sync catalog updates without manual database interventions
- Assisted in **Azure deployment** configuration for staging environments, supporting CI builds and release validation prior to production cutovers
- Collaborated with senior engineers and **design partners** to refine UI layouts, improving form usability based on user testing feedback from 20+ early adopters
- Resolved **bugs and performance bottlenecks** in database queries and API handlers, contributing fixes that stabilized demo readiness for investor presentations

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **responsive web pages** with HTML, CSS, and JavaScript for foundation outreach campaigns, ensuring accessibility across desktop and mobile browsers
- Implemented **contact and donation forms** integrated with backend services, supporting reliable submission handling for seasonal fundraising initiatives
- Maintained **content updates** and cross-browser compatibility fixes for the organization's public site during a short-term remote engagement
- Coordinated with stakeholders to translate **UI mockups** into production-ready layouts, aligning visual design with brand guidelines on tight deadlines

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Blazor, JavaScript, TypeScript, HTML5, CSS3, Responsive UI, UI/UX Collaboration

Backend: C#, ASP.NET Core, .NET Framework, RESTful APIs, Microservices, Entity Framework, OAuth 2.0

Databases: SQL Server, PostgreSQL, Redis, MongoDB

Cloud & DevOps: AWS (ECS, Lambda, RDS, S3), Azure (App Service, Functions), Docker, Terraform, CI/CD, GitHub Actions

Monitoring & Tools: Application Insights, CloudWatch, Splunk, xUnit, Selenium, Swagger/OpenAPI

Workflow & PM: Agile/Scrum, Code Reviews, Jira, Confluence, Cross-functional Collaboration
