

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 8+ years delivering enterprise applications in fintech and banking. Expert in Java, Spring Boot, and Angular for microservices, REST APIs, and high-performance UIs. Led architecture and full-stack development from PostgreSQL data models to containerized AWS deployments. Mentors engineers, partners with cross-functional teams, and drives engineering standards through code review and CI/CD automation.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led **end-to-end full stack development** of a portfolio analytics platform using Java, Spring Boot, and Angular, serving 200+ investment professionals with sub-second query performance across multi-asset holdings.
- Architected **RESTful microservices** for trade execution workflows and reduced batch processing latency by 45% through **event-driven Kafka pipelines** and asynchronous service orchestration.
- Designed a reusable **Angular component library** with TypeScript, HTML5, and CSS3 adopted across 4 product teams, cutting front-end development time for new features by 30%.
- Built a secure **API gateway layer** with OAuth2/JWT authentication, role-based access controls, and audit logging that met SOC 2 compliance requirements for client-facing services.
- Optimized **PostgreSQL and MongoDB** data access patterns for high-volume financial reporting, improving complex aggregation queries from 12 seconds to under 2 seconds.
- Containerized **Spring Boot services with Docker** and deployed to AWS ECS through Jenkins and GitHub Actions CI/CD pipelines, enabling zero-downtime releases across 12 production services.
- Mentored 3 junior engineers through **code reviews, pair programming, and design sessions**, establishing Spring Boot coding standards adopted department-wide.
- Partnered with product, QA, and UX teams in agile sprints to deliver 15+ major releases, translating business requirements into **scalable enterprise architecture** and maintainable service contracts.
- Diagnosed and resolved **cross-stack production incidents** spanning Angular state management, JVM memory tuning, and database connection pooling, reducing mean time to recovery by 40%.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java Spring Boot microservices** for a fixed income trading platform processing \$2B+ daily volume, integrating legacy mainframe systems through REST APIs and standardized message contracts.
- Built **Angular dashboards** for real-time risk exposure monitoring, giving traders consolidated views across multiple asset classes with WebSocket-driven live data updates.
- Implemented **MySQL and Oracle database migrations** and query optimizations supporting regulatory reporting deadlines with 99.9% uptime during peak settlement windows.
- Contributed to **event-driven architecture** designs using Kafka for decoupled service communication across 8 trading applications, improving fault isolation and deployment independence.
- Authored automated integration and unit tests with JUnit and Mockito, increasing **code coverage from 62% to 85%** across core trading services before each production release.
- Deployed **containerized applications to Azure Kubernetes Service** with Helm charts, partnering with DevOps on pipeline hardening, secrets management, and rollback procedures.
- Led standups and sprint planning for a 6-person development squad, coordinating delivery across **global New York and London teams** during high-volatility market sessions.

- Troubleshot **distributed system failures** spanning API layers, message queues, and SQL backends under strict SLAs, restoring critical trading workflows within minutes of detection.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **Angular features** for a restaurant check-splitting web application, implementing responsive UI components used by 50+ pilot venues during beta rollout.
- Built **REST API endpoints in Java Spring Boot** for order management and payment reconciliation, integrating with third-party POS systems through documented service contracts.
- Wrote unit and integration tests with JUnit and Jasmine/Karma, improving **test coverage for critical payment flows** by 35% before each sprint release.
- Participated in agile ceremonies and code reviews, contributing to **Git branching strategies** and Jenkins CI pipeline improvements for automated build verification.
- Refactored legacy jQuery modules to **TypeScript Angular services**, reducing client-side defects and improving maintainability across the payment workflow codebase.
- Collaborated with senior engineers on **MongoDB schema design** for multi-tenant restaurant data isolation and performant read patterns under concurrent order volume.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built a responsive nonprofit website using **HTML5, CSS3, and JavaScript**, improving mobile accessibility scores by 40% per Lighthouse audits.
- Implemented **content management workflows** and donation form integrations, enabling the foundation to process online contributions through secure payment handoffs.
- Optimized page load performance through **asset minification and lazy loading**, reducing average load time from 4.2 seconds to 1.8 seconds.
- Collaborated with stakeholders to translate nonprofit mission requirements into **intuitive donor-facing web experiences** aligned with accessibility best practices.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: Angular 8+, TypeScript, HTML5, CSS3, RxJS, Angular Material, Responsive Design

Backend: Java, Spring Boot, Spring Security, Microservices, REST APIs, Kafka, Node.js

Databases: PostgreSQL, MySQL, MongoDB, Oracle, Redis

Cloud & DevOps: AWS (ECS, S3, Lambda), Azure AKS, Docker, Kubernetes, CI/CD, Jenkins, GitHub Actions

Monitoring & Tools: Grafana, Prometheus, Splunk, SonarQube, Git, Maven, Gradle

Workflow & PM: Agile/Scrum, Jira, Confluence, Technical Mentorship, Cross-functional Collaboration
