

Ryan Cho

Senior Java Full Stack Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Senior software engineer with 8+ years delivering enterprise full-stack applications in finance and capital markets. Expert in Java, Spring Boot, and microservices with React and Angular frontends, REST APIs, and cloud-native deployment on AWS and Kubernetes. Drives cross-functional Agile delivery with DevOps and QA, SQL and NoSQL optimization, Kafka event processing, and OAuth2/JWT security. Strong ownership from architecture through CI/CD and production support.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected **Java 17 microservices** on Spring Boot for portfolio analytics workflows, decomposing monolith boundaries to reduce API latency by **35%** across high-traffic read paths.
- Built **RESTful APIs** secured with Spring Security, OAuth2, and JWT, enabling authenticated integration across **12 internal trading and risk platforms** without shared session state.
- Delivered responsive **React and TypeScript** dashboard components for portfolio managers, streamlining daily reconciliation tasks and improving end-user workflow completion rates.
- Established **Docker and Kubernetes** deployment standards on AWS across **4 production environments**, achieving zero-downtime releases with rolling update strategies.
- Integrated **Apache Kafka** event streams for asynchronous trade settlement notifications, processing **8K+ messages daily** with idempotent consumer design and dead-letter handling.
- Optimized **MongoDB and SQL** access patterns for holdings and position data, cutting batch report generation from several minutes to **under 90 seconds** for large accounts.
- Partnered with QA and DevOps in **Agile/Scrum** delivery, mentoring **3 engineers** on microservices design, contract testing, and REST API versioning practices.
- Implemented **CI/CD pipelines** with Git and Maven, expanding automated integration coverage and reducing production defect escape rate by **28%** year over year.
- Owned production support for full-stack applications, resolving **P1 incidents within SLA** and driving root-cause fixes spanning backend services and frontend client layers.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **Spring Boot microservices** for capital markets reporting, exposing REST APIs consumed by front-office and compliance teams across **multiple business lines**.
- Designed **Angular and TypeScript** interfaces for trade surveillance dashboards, surfacing real-time alerts to operations staff within **Agile sprint** release cycles.
- Migrated legacy monolith endpoints to **containerized services** with Docker, increasing deployment frequency from monthly to **bi-weekly releases** with rollback-safe artifacts.
- Authored **SQL queries and stored procedures** for enterprise relational databases, supporting regulatory reporting with **sub-second lookup performance** on critical datasets.
- Implemented **OAuth2 and JWT** token flows for internal API gateways, standardizing authentication and authorization across cross-team service integrations.
- Collaborated with business analysts and QA through the **full SDLC**, translating requirements into testable microservice contracts and integration test scenarios.
- Supported **Azure cloud-native** deployments and Maven-based build automation, aligning release artifacts with enterprise DevOps and change-management standards.

- Participated in **code reviews and production support**, triaging REST API failures and coordinating hotfixes with global technology teams during market hours.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **JavaScript and React** features for restaurant payment workflows, integrating REST APIs for check-splitting, tipping, and digital receipt delivery.
- Developed backend **RESTful endpoints** in Java supporting order state transitions, applying MVC layering and validation patterns under senior engineer guidance.
- Wrote **SQL queries** and data access layers for transactional reporting, validating result accuracy against QA-defined test cases before each sprint release.
- Contributed to **Git-based** feature branches with peer code reviews, maintaining consistent coding standards across the intern engineering cohort.
- Assisted in **Docker containerization** of local development environments, reducing onboarding setup time for new team members joining mid-project.
- Supported **Agile sprint** ceremonies and unit testing efforts, helping stabilize pilot releases for early production customers.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** with HTML, CSS, and JavaScript for nonprofit fundraising campaigns and donor engagement landing experiences.
- Integrated third-party **REST APIs** for donation processing and email notifications, enabling reliable end-to-end transaction flows on foundation websites.
- Maintained **Git repositories** and deployment scripts, supporting consistent updates across staging and production site environments.
- Collaborated with stakeholders to refine UI requirements, delivering **accessible layouts** aligned with foundation branding and content guidelines.
- Resolved cross-browser compatibility defects, improving **page load consistency** across desktop and mobile client environments.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, Angular, TypeScript, JavaScript, HTML5, CSS3, Responsive UI Components

Backend: Java 8/11/17, Spring Boot, Spring Security, Microservices, RESTful APIs, OAuth2, JWT, Maven

Databases: SQL, MongoDB, NoSQL, Query Optimization, Relational Schema Design, Data Modeling

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Git, Cloud-Native Development

Monitoring & Tools: Apache Kafka, Production Support, Application Performance Tuning, Integration Testing, API Gateways

Workflow & PM: Agile/Scrum, Code Reviews, Cross-Functional Collaboration, SDLC, Technical Mentorship
