PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years building backend services, customer-facing web applications, and scalable infrastructure across finance and SaaS environments. Owns features from design through deployment, debugs production issues under pressure, and ships reliable code backed by strong fundamentals in data structures and system behavior. Collaborative engineer who explains technical decisions clearly, incorporates feedback quickly, and steadily improves product quality week over week.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led end-to-end delivery of **investment platform features** from API design through **React** frontends and production deployment, serving portfolio managers across 3 business units.
- Built **REST and event-driven backend services** in **Python** and **Node.js** processing 2M+ daily transactions with automated validation and audit-ready logging.
- Designed **PostgreSQL** schemas and migration workflows that reduced data reconciliation errors by 40% while supporting new reporting requirements without downtime.
- Resolved **production incidents** across distributed services—tracing failures from UI regressions to database contention and shipping fixes within SLA targets.
- Implemented **CI/CD pipelines** on **AWS** (ECS, Lambda, S3) that cut release cycle time from days to hours and improved deployment rollback reliability.
- Partnered with product and operations stakeholders to translate ambiguous requirements into **technical specifications**, sequencing work to unblock dependent teams early.
- Mentored 2 junior engineers on **code review practices**, debugging methodology, and test coverage standards that raised team pull request quality.
- Introduced **observability improvements** (structured logging, dashboards, alerting) that shortened mean time to detect recurring infrastructure issues by 35%.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java** and **Python** backend components for internal risk and trading tools used by 500+ analysts across global markets operations.
- Shipped **React** and **TypeScript** interfaces that replaced legacy spreadsheet workflows, improving task completion time for daily reconciliation by 25%.
- Owned feature delivery through the full lifecycle—requirements gathering, implementation, **UAT coordination**, and production support for regulatory reporting modules.
- Diagnosed and fixed **production defects** in batch processing pipelines, restoring SLA compliance after data feed interruptions affected downstream systems.
- Collaborated with infrastructure teams to harden **API integrations** between vendor systems and bank data stores, improving retry logic and error visibility.
- Contributed to **microservices migration** efforts by decomposing monolithic modules into independently deployable services with clear ownership boundaries.
- Wrote **unit and integration tests** that increased coverage on critical payment validation paths and reduced regression volume in release cycles.
- Participated in agile ceremonies and cross-functional design reviews, communicating trade-offs on **performance, security, and maintainability** to non-technical partners.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **Node.js** API endpoints and **MongoDB** integrations supporting digital receipt management features used in pilot deployments with restaurant partners.
- Implemented **React** UI components for admin dashboards, improving data entry workflows and reducing client-reported usability issues during beta testing.
- Debugged **authentication and session handling** bugs across staging and production environments, documenting root causes and preventative test cases.
- Assisted senior engineers with **Git** workflow, code reviews, and deployment checklists while learning disciplined patterns for shipping small, testable changes.
- Prototyped **reporting queries** and export utilities that helped operations teams analyze transaction volumes during early product validation.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **WordPress** and custom **PHP** pages for nonprofit fundraising campaigns, meeting launch deadlines for seasonal donation drives.
- Applied **HTML**, **CSS**, and **JavaScript** updates to improve mobile responsiveness and accessibility across primary site templates.
- Configured **hosting and DNS** settings with stakeholders to ensure stable traffic handling during peak awareness events.
- Fixed cross-browser layout defects identified in QA, shipping patches within 48 hours to preserve donor conversion flows.
- Coordinated content uploads and basic **SEO metadata** with marketing volunteers to maintain consistent branding across program pages.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive Web Design

Backend: Python, Node.js, Java, REST APIs, Event-Driven Architecture, Microservices

Databases: PostgreSQL, MongoDB, SQL, Schema Design, Data Migrations

Cloud & DevOps: AWS (ECS, Lambda, S3), Docker, CI/CD, GitHub Actions, Infrastructure as Code

Monitoring & Tools: Structured Logging, Grafana, Datadog, Git, Jest, Pytest

Workflow & PM: Agile/Scrum, Jira, Technical Documentation, Code Review, Stakeholder Communication
