PROFESSIONAL SUMMARY

Full stack software engineer with eight years of experience building production SaaS platforms, REST APIs, and data-intensive systems across fintech and capital markets. Owns features from design through deployment, with depth in Ruby on Rails, PostgreSQL, React, and Node. Partners with product and design to solve business problems while championing test coverage, thoughtful code review, and practical use of AI development tools.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led full-stack development of a **portfolio analytics platform** serving investment teams and external clients, delivering **Rails APIs** and **React** interfaces embedded in daily capital allocation workflows.
- Owned **PostgreSQL schema design** and query tuning for data-intensive reporting features, cutting p95 API latency by **40%** while transaction volumes grew across fund strategies.
- Architected **REST API endpoints** handling peak read traffic during market hours, applying caching and connection pooling to sustain **sub-200ms response times** under load.
- Established **end-to-end test coverage** with RSpec and Cypress across backend and frontend changes, defining team standards for minimum coverage on every pull request.
- Conducted **coaching-oriented code reviews** for a team of four engineers, evaluating trade-offs between performance, maintainability, and testability before merge.
- Partnered with Product and Customer Success to translate **business requirements** into technical designs, leading solution discussions for multi-sprint platform initiatives.
- Integrated **AI-assisted development workflows** into team practices, documenting review habits and prompt patterns that accelerated delivery without compromising quality.
- Maintained **technical documentation** for services and data models, enabling new engineers to ship production changes within their first week on the team.
- Built **Node-based ingestion services** for real-time market data, replacing batch ETL pipelines and improving data freshness from hours to minutes for downstream analytics.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **internal trading support tools** for fixed-income desks, building Java-based APIs and web interfaces consumed by **200+ analysts** across global offices.
- Designed **relational database models** for regulatory reporting workflows, normalizing trade data from multiple source systems into a unified, auditable schema.
- Implemented automated **unit and integration tests** for reconciliation services, catching data discrepancies before daily batch processing in production.
- Led technical design discussions for a **counterparty risk dashboard**, presenting trade-offs between real-time updates and system load to non-technical stakeholders.
- Built **React front-end components** for operations dashboards, improving analyst visibility into exception queues and reducing manual triage time by **30%**.
- Partnered with business analysts to clarify requirements and deliver incremental releases on a **two-week sprint cadence** in a regulated environment.
- Authored **runbooks and API documentation** for deployed services, supporting reliable handoffs to production support teams.

- Mentored **summer analysts** on coding standards, pull request practices, and safe deployment procedures across the technology organization.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **full-stack web features** for a restaurant technology platform using JavaScript, Node.js, and PostgreSQL, supporting digital check management for hospitality clients.
- Wrote **unit tests** for backend services and contributed to CI pipeline improvements that shortened feedback loops for the engineering team.
- Participated in **code reviews** and incorporated feedback to improve readability and error handling across API endpoints.
- Collaborated with senior engineers on **database migrations** and schema changes, applying relational design patterns for multi-tenant data.
- Developed **React components** for admin dashboards, enabling restaurant staff to configure menu items and pricing without engineering support.
- Documented **API contracts** and local setup steps, helping onboard new interns and reducing environment configuration time.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered a **responsive nonprofit website** using HTML, CSS, and JavaScript for a community foundation fundraising campaign.
- Implemented **contact forms and CMS updates**, enabling staff to publish events and announcements without developer involvement.
- Optimized page load performance through **asset minification** and image compression, improving Lighthouse performance scores by **25%**.
- Coordinated remotely with foundation leadership to gather requirements and iterate on design feedback within tight campaign deadlines.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript (ES6+), TypeScript, HTML5, CSS3, Redux, Cypress

Backend: Ruby on Rails, Node.js, REST APIs, Java, RSpec, GraphQL

Databases: PostgreSQL, MySQL, Redis, Relational Schema Design, Query Optimization

Cloud & DevOps: AWS, Docker, CI/CD (GitHub Actions), Linux, Terraform

Monitoring & Tools: Datadog, Sentry, Git, AI Development Tools (Copilot, Cursor)

Workflow & PM: Agile/Scrum, Jira, Cross-functional Collaboration, Technical Documentation
