PROFESSIONAL SUMMARY

Full stack engineer with 8+ years building production web applications across fintech and capital markets. Experienced designing Rails-backed APIs and React frontends, scaling data-intensive systems on PostgreSQL, and owning features from design through deployment. Known for systems-oriented solution design, rigorous test coverage, and coaching code reviews while partnering with product and business stakeholders to deliver maintainable, high-traffic platforms.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led end-to-end delivery of **full stack features** spanning **Ruby on Rails** services and **React** interfaces supporting portfolio analytics and investor reporting for capital markets teams.
- Designed and scaled **RESTful APIs** processing high-volume position and market data, applying **PostgreSQL** indexing and schema patterns that improved dashboard query responsiveness under peak load.
- Owned **solution architecture** for platform initiatives, evaluating trade-offs between **performance, maintainability, and testability** during design reviews with product and engineering leadership.
- Built and maintained **RSpec and Capybara** test coverage for critical workflows, establishing team standards that reduced production regressions across API and UI changes.
- Conducted **coaching-oriented code reviews** across the engineering team, delivering constructive feedback that improved consistency in Rails and JavaScript patterns and shortened rework cycles.
- Partnered with **Product, Design, and operations** stakeholders to translate business requirements into extensible data models and reusable React component libraries.
- Maintained **technical documentation** for services, data contracts, and deployment runbooks, enabling reliable handoffs and on-call operation of production systems.
- Introduced **AI-assisted development** practices for planning, implementation, and review, helping the team adopt deliberate workflows for safe and productive tool use.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Built **internal trading and risk tooling** with **Ruby on Rails** and **JavaScript**, supporting fixed income and equity workflows on a regulated banking platform.
- Implemented **PostgreSQL-backed** data services for instrument reference and position data, applying normalization and indexing strategies for analyst search and aggregation.
- Developed **React** dashboards for market surveillance and reporting, replacing manual spreadsheet processes with responsive, role-aware interfaces.
- Wrote **unit and integration tests** for API endpoints and batch jobs, identifying coverage gaps during change review to protect downstream settlement processes.
- Participated in **cross-functional design discussions** with business analysts and compliance teams, clarifying technical constraints and recommending incremental delivery approaches.
- Contributed to **code review** practices on a distributed engineering team, incorporating feedback to improve error handling and API contract consistency.
- Documented **service interfaces and data lineage** for audit readiness, making platform behavior understandable to operations and control functions.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **Node.js** and **React** features for a document compliance platform, enabling clients to track and verify transactional paperwork in real time.
- Integrated **REST APIs** with frontend state management, delivering form workflows and validation that reduced manual data entry for compliance reviewers.
- Implemented **CSS-driven responsive layouts** aligned with design specifications across desktop and tablet viewports.
- Added **automated tests** for API endpoints and UI components, supporting safer iteration during weekly release cycles.
- Collaborated with senior engineers in **code reviews**, applying feedback to improve component reuse and error boundary handling.
- Supported **PostgreSQL query optimization** for paginated listing endpoints processing large document record sets.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **React** and **JavaScript** enhancements for nonprofit fundraising pages, improving donation flow completion through clearer UX and client-side performance tuning.
- Built lightweight **backend endpoints** supporting content updates and donor form submissions with validation and structured error messaging.
- Applied **semantic HTML and CSS** standards for accessibility and cross-browser consistency on marketing and event landing pages.
- Worked with stakeholders to **gather requirements** and translate them into incremental releases within a small remote team.
- Maintained **deployment scripts** and environment configuration for staging and production releases.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript, TypeScript, HTML5, CSS3, Redux, Node.js

Backend: Ruby on Rails, Node.js, REST API Design, GraphQL, Active Record

Databases: PostgreSQL, Redis, SQL Optimization, Schema Design, Migrations

Cloud & DevOps: AWS, Docker, CI/CD, GitHub Actions, Linux, Nginx

Monitoring & Tools: Datadog, Sentry, RSpec, Capybara, Jest, ESLint, Git

Workflow & PM: Agile/Scrum, Jira, Confluence, Technical Documentation, Code Review, AI-Assisted Development
