PROFESSIONAL SUMMARY

Full stack engineer with 7+ years building React and Java microservice applications across financial services and SaaS. Skilled in Azure, Kubernetes, Docker, and GitHub Actions CI/CD with strong automation testing for UI and APIs. Delivers reliable containerized platforms, production observability with App Insights and Splunk, and mentors teams on scalable engineering practices.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **React-based dashboards** integrated with **Java microservices**, supporting portfolio analytics workflows used daily across investment operations teams.
- Deployed **containerized services on Azure Kubernetes Service (AKS)** with **Docker**, establishing repeatable release patterns across staging and production environments.
- Built and maintained **GitHub Actions CI/CD pipelines** spanning build, test, and deploy stages, reducing manual release steps for three cross-functional product teams.
- Established **UI and API automation testing** with integration suites and contract validation, catching regressions before production and strengthening release confidence across major feature paths.
- Instrumented distributed services with **Azure Monitor and Application Insights**, enabling proactive detection of latency and error trends across microservice endpoints.
- Partnered with product, QA, and infrastructure stakeholders in **agile delivery cycles**, translating business requirements into technical designs with clear ownership boundaries.
- Provided **technical mentorship** to junior engineers on React patterns, microservice design, and code review standards, improving team delivery consistency over multiple quarters.
- Leveraged **enterprise AI-assisted development tooling** for code review, test generation, and documentation workflows, improving team throughput without compromising quality gates.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full-stack features** for internal banking platforms using **React** front ends and **Java microservices**, supporting trade reporting and operational tooling across multiple business lines.
- Contributed to **CI/CD automation** with pipeline templates and GitHub-based workflows, standardizing build and deployment steps for application teams.
- Implemented **API and UI test automation** frameworks that validated critical payment and reconciliation flows, reducing production defect escape rates on major releases.
- Containerized application components with **Docker** and supported migration paths toward **Kubernetes** orchestration in enterprise cloud environments.
- Monitored application health using **Splunk and Dynatrace**, triaging incidents and driving root-cause fixes with cross-functional support teams under tight SLAs.
- Collaborated in **cross-functional agile squads** with business analysts and QA engineers, delivering iterative enhancements aligned with regulatory and operational requirements.
- Supported **version control and branching practices on GitHub**, facilitating code reviews and collaborative development across distributed engineering groups.

Software Engineering Intern Chexology

Jun/2018 - May/2019

Remote | 17th Floor, New York

- Built **React components** for customer-facing web features, improving usability of order tracking and account management screens across desktop browsers.
- Integrated front-end modules with **REST APIs** backed by Java services, ensuring consistent data handling and error states for end-user workflows.
- Wrote **automated UI tests** covering core user journeys, helping the team validate changes before each sprint release.
- Participated in **agile ceremonies** and paired with senior engineers on bug fixes, gaining hands-on experience with GitHub-based development workflows.
- Assisted with **Docker-based local development** setup documentation, enabling faster onboarding for subsequent intern cohorts.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** with HTML, CSS, and JavaScript for nonprofit outreach campaigns, supporting content updates without engineering dependency.
- Implemented **client-side form validation and API integrations** to capture donor information reliably across mobile and desktop viewports.
- Optimized page load performance through **asset minification and caching strategies**, improving accessibility for users on slower connections.
- Collaborated with stakeholders to translate **design mockups into production-ready interfaces**, maintaining brand consistency across site sections.
- Maintained site content and fixed **cross-browser layout issues**, ensuring stable presentation during fundraising event periods.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript (ES6+), TypeScript, HTML5, CSS3, Redux, Responsive Web Design

Backend: Java, Spring Boot, Microservices, REST APIs, Python, C#

Databases: PostgreSQL, SQL Server, MongoDB, Redis

Cloud & DevOps: Azure, AKS, Kubernetes, Docker, GitHub Actions, CI/CD, Terraform

Monitoring & Tools: Azure Monitor, Application Insights, Splunk, Dynatrace, Git, GitHub

Workflow & PM: Agile/Scrum, Jira, Confluence, Code Review, Technical Mentorship
