PROFESSIONAL SUMMARY

Software engineer with 4+ years delivering production fullstack systems in finance and investment environments. Builds Python services, React/TypeScript, and PostgreSQL models for workflow-heavy applications. Owns API correctness, test coverage, observability, and SLA-driven incident response. Partners with product and engineering teams to refine complex requirements into maintainable architecture. Experienced integrating AI development tools and LLM-based enrichment into customer-facing features.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led fullstack delivery of an internal portfolio analytics platform serving **40+ investment analysts** through **React, TypeScript, and Python/Django REST APIs**.
- Designed **PostgreSQL schemas and versioned API contracts** for market data ingestion, enabling reliable enrichment of holdings and performance metrics across batch pipelines.
- Built **data-heavy workflow UIs** with filtering, pagination, and explainability panels that reduced manual reconciliation effort for operations teams during quarter-end reporting.
- Implemented an **observability stack** with metrics, structured logging, and distributed tracing; improved alert signal quality and runbooks to shorten production incident resolution cycles.
- Owned **SLA/SLO targets** for core reporting services and introduced circuit breakers and retry policies that preserved uptime during volatile market windows.
- Integrated **LLM-assisted narrative generation** into quarterly client reporting workflows, pairing prompt templates with validation gates for factual consistency.
- Partnered with **Product, Risk, and Compliance** stakeholders to translate regulatory requirements into phased roadmaps and shippable milestones.
- Mentored two engineers through **code reviews, design sessions, and test-driven development** practices adopted across the engineering team.
- Refactored legacy monolith endpoints into **modular Django services** with shared authentication and versioning patterns consumed by three downstream teams.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **fullstack features** for internal risk dashboards using **React, TypeScript, and Python services** backed by PostgreSQL.
- Built and maintained **REST APIs** for trade lifecycle data with strict correctness requirements for downstream risk calculations.
- Implemented **batch enrichment jobs** processing daily position feeds, improving data freshness for morning compliance reviews.
- Added **metrics and logging instrumentation** to critical services, enabling production debugging and usage analysis during peak trading hours.
- Collaborated with **Product and partner engineering teams** to break cross-team initiatives into clear technical tasks and delivery milestones.
- Wrote **well-tested Django views and serializers** optimized for large result sets and evolvable data models.
- Participated in **incident response rotations**, contributing runbook updates and dashboard improvements after severity-2 outages.

- Contributed to a **shared frontend component library** adopted across two internal portals, standardizing data table and form patterns.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React components** for customer onboarding flows integrated with backend authentication APIs.
- Implemented **Python API endpoints** for document verification workflows with unit and integration test coverage.
- Improved **PostgreSQL query performance** on user search features through indexing and query refactoring.
- Collaborated with senior engineers on **code reviews** and sprint planning for SaaS platform features.
- Added **logging and error tracking** hooks to frontend and backend services for faster QA feedback loops.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** using JavaScript and CSS for nonprofit fundraising campaigns.
- Integrated **third-party donation APIs** with form validation and error handling for donor checkout flows.
- Optimized **page load performance** through asset minification and lazy loading across mobile devices.
- Maintained **content management workflows** enabling marketing staff to publish updates without developer support.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Webpack, data-heavy UI patterns

Backend: Python, Django, Django REST Framework, FastAPI, REST APIs, Celery

Databases: PostgreSQL, Redis, SQL optimization, schema design, relational modeling

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD (GitHub Actions), cloud-native deployments

Monitoring & Tools: Datadog, Prometheus, Grafana, structured logging, distributed tracing, PagerDuty

Workflow & PM: Agile/Scrum, Jira, cross-functional collaboration, technical design docs, code review
