

Ryan Cho

Senior Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Software engineer with eight years building production web backends and customer-facing features across financial services and investment platforms. Owns feature scoping, design, and delivery while addressing technical debt and production defects. Partners with support on escalations, mentors engineers on API patterns, and applies pragmatic AI tooling to accelerate development.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led end-to-end scoping and delivery of **portfolio analytics APIs** serving 200+ institutional users, defining requirements with product and documenting tradeoffs between query flexibility and latency.
- Designed and shipped **Node.js and Python microservices** on AWS that power account reconciliation workflows, coordinating schema migrations with zero-downtime deploys across production environments.
- Identified recurring production defects through **support ticket analysis** and fixed root causes in payment processing modules, cutting repeat escalations across three release cycles.
- Refactored legacy monolith endpoints into **maintainable REST services**, eliminating duplicated validation logic and establishing conventions the team adopted for new feature work.
- Built **React dashboards** for internal operations teams to inspect trade settlements, pairing frontend components with paginated backend queries optimized for large datasets.
- Championed **technical debt paydown** by prioritizing test coverage on critical paths and introducing contract tests that caught breaking changes before customer impact.
- Mentored two junior engineers through **design reviews and pairing sessions**, improving their ability to scope stories independently and push back on ambiguous requirements.
- Prototyped an **AI-assisted debugging workflow** that summarizes log traces and suggests likely failure points, shortening mean time to resolution for on-call investigations.
- Collaborated with infrastructure on **CI/CD pipeline improvements** that shortened release validation from hours to under 30 minutes for backend services.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java and Python backend services** supporting trade reporting and regulatory submissions used by desks across North America.
- Owned feature design for internal **workflow automation tools**, balancing immediate desk requests with a modular architecture that supported future product lines.
- Resolved **production incidents** alongside application support, tracing failures through distributed logs and deploying targeted hotfixes within SLA windows.
- Reduced **technical debt** in batch processing jobs by replacing brittle scripts with scheduled services and centralized error handling.
- Presented **architecture tradeoffs** to senior stakeholders when scoping platform upgrades, advocating for incremental rollouts over risky big-bang migrations.
- Built **REST APIs** consumed by front-office dashboards, implementing caching and input validation that improved response times under peak market volume.
- Participated in **code review culture** and lunch-and-learn sessions, sharing patterns for database transactions and secure credential management.

- Migrated legacy components to **containerized deployments**, coordinating with DevOps on environment parity between development and production.
- Automated **data reconciliation checks** that flagged discrepancies before end-of-day reporting, decreasing manual verification effort for operations teams.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **REST API endpoints** in Node.js for a restaurant operations platform, connecting mobile checkout flows to inventory and order management services.
- Fixed **cross-browser UI defects** reported by pilot customers and added regression checks that prevented layout breaks in production releases.
- Assisted senior engineers in scoping **feature stories** for payment integrations, documenting acceptance criteria and edge cases for third-party webhook handling.
- Wrote **unit and integration tests** for authentication middleware, improving confidence in token refresh logic before each sprint demo.
- Built **React components** for admin reporting views, consuming paginated APIs and surfacing error states aligned with support troubleshooting needs.
- Refactored duplicated **database access helpers** into shared modules, making subsequent feature additions faster for the two-person engineering team.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **responsive marketing pages** for a nonprofit foundation site using HTML, CSS, and JavaScript within a six-week engagement.
- Integrated **donation form submissions** with a lightweight backend handler that validated input and forwarded records to the organization's CRM workflow.
- Optimized **page load performance** by compressing image assets and deferring non-critical scripts, improving Lighthouse scores ahead of a fundraising campaign.
- Collaborated with stakeholders to translate **content requirements** into accessible layouts tested across desktop and mobile breakpoints.
- Documented **deployment steps** for the volunteer web team, enabling them to publish content updates without engineering assistance.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Responsive UI

Backend: Node.js, Python, Java, REST APIs, Microservices, GraphQL, Authentication & Authorization

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL Query Optimization

Cloud & DevOps: AWS (EC2, Lambda, S3), Docker, Kubernetes, Terraform, CI/CD Pipelines, GitHub Actions

Monitoring & Tools: Datadog, Grafana, Sentry, Postman, Git, Linux

Workflow & PM: Agile/Scrum, Technical Design Docs, Code Review, Mentorship, Jira, Stakeholder Communication
