

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years building web applications, backend services, and APIs across fintech and capital markets platforms. Own delivery from ambiguous requirements through production, including technical design, rigorous code review, and proactive observability. Lead medium-sized initiatives, mentor engineers, and model effective AI-assisted development workflows. Partner with product and design to ship reliable features backed by clear architectural trade-offs.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led design and delivery of **full-stack platform capabilities** spanning REST APIs, AWS Lambda workers, and React interfaces supporting portfolio analytics used across investment operations.
- Set team standards for **AI-assisted development** by defining planning prompts, verification checklists, and review depth criteria that improved quality on agent-generated pull requests.
- Owned **production observability** with Datadog dashboards and structured logging, catching regressions before support tickets and tightening alert routing on core ingestion services.
- Mentored **three junior engineers** through pairing and direct code review feedback, accelerating their ownership of API modules and raising team delivery consistency.
- Drove a **PHP and Laravel service modernization** effort that replaced brittle reporting scripts with modular endpoints, enabling safer weekly releases without downtime.
- Partnered with **product managers and designers** to translate ambiguous capital-markets requirements into phased technical designs with documented trade-offs and rollback paths.
- Architected an **event-driven integration layer** using queue-backed Lambda pipelines to process high-volume vendor feeds while isolating downstream failures from user-facing workflows.
- Led a cross-functional **permissions and audit initiative**, surfacing dependency risks early and sequencing reversible rollouts that preserved operational trust with stakeholders.
- Introduced **pre-merge staging parity checks** and smoke tests that reduced production rollbacks on monthly feature releases.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Built and maintained **Java and Python backend services** powering internal trading and compliance dashboards used by analysts across global markets operations.
- Designed **REST API contracts** between front-office applications and middle-office data stores, reducing integration defects through schema validation and contract testing.
- Contributed to **microservice decomposition** of monolithic reporting tools, enabling independent deployment cycles for teams supporting regulatory reporting workflows.
- Implemented **automated monitoring dashboards** tracking service latency and error budgets, identifying degradation before downstream batch jobs failed.
- Collaborated with **business stakeholders and technology leads** to refine ambiguous regulatory change requests into sprint-ready deliverables with clear acceptance criteria.
- Reviewed pull requests across a **15-engineer program**, giving direct feedback on security, performance, and maintainability aligned with enterprise banking standards.
- Delivered **React-based internal tools** that replaced spreadsheet-driven reconciliation, reducing manual processing for operations teams handling daily trade settlements.

- Participated in **on-call rotation** for production APIs, owning root-cause analysis and durable fixes rather than temporary production patches.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **React and Node.js features** for a restaurant compliance platform, shipping customer-facing workflows from design mockups through QA sign-off.
- Implemented **REST endpoints** for check-in and certification tracking with PostgreSQL persistence and validated request handling across core user journeys.
- Added **unit and integration tests** for critical API paths, improving release confidence during weekly production deployments.
- Participated in **code reviews and pairing sessions**, applying senior feedback on error handling, component reuse, and readable service boundaries.
- Optimized **database queries** for admin reporting views, improving dashboard responsiveness for multi-location restaurant operators.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** for a nonprofit foundation site using HTML, CSS, and JavaScript aligned with brand guidelines and accessibility expectations.
- Integrated **contact and donation forms** with backend mail handlers, validating submissions and reducing spam through server-side checks.
- Worked with stakeholders to **clarify content requirements** and iterate on layouts ahead of the public site launch.
- Documented **deployment steps** for shared hosting updates, enabling volunteer maintainers to publish content changes independently.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, component-driven UI development

Backend: PHP, Laravel, Node.js, Python, Java, REST APIs, GraphQL, AWS Lambda, event-driven services

Databases: PostgreSQL, MySQL, Redis, MongoDB, query optimization, schema design

Cloud & DevOps: AWS, Docker, CI/CD, GitHub Actions, serverless deployment, infrastructure-as-code

Monitoring & Tools: Datadog, Sentry, CloudWatch, structured logging, alerting, production diagnostics

Workflow & PM: Agile/Scrum, Jira, technical design docs, code review standards, AI-assisted development workflows, cross-functional delivery
