### PROFESSIONAL SUMMARY

---

Full stack software engineer with 6+ years delivering production systems across finance and SaaS. Own features end to end using Python, TypeScript, React, and PostgreSQL—from architecture through deployment. Turn ambiguous requirements into reliable services, strengthen testing and code review practices, and mentor engineers on complex initiatives. Experienced building LLM-assisted workflows, analytics pipelines, and platform APIs in fast-moving teams.

### WORK EXPERIENCE

---

#### Software Engineer

May/2022 - May/2026

##### Aspen Capital

Remote | 10th Floor, New York

- Led **end-to-end delivery** of investor-facing portfolio analytics spanning React frontend and Python services used daily by portfolio and operations teams across the firm.
- Architected and shipped an **LLM-assisted document parsing pipeline** for financial report extraction, with validation controls suitable for audit review workflows.
- Drove **PostgreSQL schema and API design** for multi-tenant SaaS modules, enabling three product teams to ship in parallel across 12 release cycles without cross-service regressions.
- Raised **testing and reliability standards** by introducing integration test suites and CI gates, cutting production incidents tied to deployments by 40% over 18 months.
- Built a **TypeScript and React component library** adopted across three product surfaces, accelerating delivery of data-heavy dashboards and shared UX patterns.
- Mentored **two junior engineers** through design reviews and pairing sessions, improving PR turnaround time and onboarding velocity for new hires.
- Partnered with stakeholders to translate **ambiguous requirements** into phased releases on six-week cadences without sacrificing production stability.
- Implemented a **ClickHouse-backed analytics layer** for time-series portfolio metrics, supporting high-cardinality queries over tens of millions of rows with predictable latency.

#### Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

##### BNP Paribas

Remote | Seventh Avenue, New York

- Owned **production Python services** supporting trade lifecycle workflows, processing thousands of daily events under strict regulatory audit requirements.
- Designed **SQL data models and stored procedures** across Oracle and PostgreSQL environments, improving reconciliation query performance by 35% for operations teams.
- Led **cross-team integration** of downstream risk reporting feeds, coordinating with compliance and platform groups across three release trains.
- Built **REST APIs and batch pipelines** that consolidated fragmented market data sources into a single internal platform used by 15+ analyst teams.
- Improved **system reliability** by adding observability, retry logic, and idempotent job handlers, reducing overnight batch failure rates by 45%.
- Translated **ambiguous business rules** from stakeholders into tested, documented services with comprehensive unit and integration coverage.
- Mentored **summer analysts** on codebase conventions, code review practices, and safe deployment procedures within a regulated environment.
- Drove **architecture decisions** for modular service boundaries that enabled incremental migration off legacy monolith components without downtime.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **React and Node.js features** for restaurant check-in workflows, contributing to a production MVP deployed across pilot locations in New York.
- Implemented **REST API endpoints** and database migrations supporting real-time guest notifications with reliable delivery under peak lunch-hour traffic.
- Wrote **unit and integration tests** for payment-adjacent flows, increasing coverage on core modules from 40% to 75%.
- Collaborated with designers to ship **responsive UI components** that improved mobile completion rates for the core check-in funnel.
- Participated in **code reviews and sprint planning** in an early-stage startup, learning production engineering practices on a fast-moving product team.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive marketing and program pages** using HTML, CSS, and JavaScript for a nonprofit research foundation website.
- Integrated **CMS-driven content workflows** enabling non-technical staff to publish updates without developer intervention.
- Optimized **page load performance** through asset minification and lazy loading, improving Lighthouse performance scores by 30%.
- Implemented **accessibility improvements** aligned with WCAG guidelines across primary site templates and navigation patterns.
- Supported **cross-browser QA** and bug fixes during launch, ensuring stable delivery for a time-bound fundraising campaign.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

**Frontend:** React, TypeScript, JavaScript, HTML5, CSS3, Responsive Design, Component Architecture  
**Backend:** Python, Node.js, TypeScript, REST APIs, System Design, Microservices, LLM Integration  
**Databases:** PostgreSQL, SQL, ClickHouse, Oracle, Redis, Schema Design, Query Optimization  
**Cloud & DevOps:** AWS, Docker, Kubernetes, CI/CD, GitHub Actions, Infrastructure as Code, Linux  
**Monitoring & Tools:** Datadog, Grafana, Prometheus, Logging Pipelines, Feature Flags, Postman  
**Workflow & PM:** Agile, Scrum, Jira, Technical Mentorship, Code Review, Stakeholder Communication, Cross-Functional Delivery
