

Ryan Cho

Senior Full-Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full-stack software engineer with 7+ years building reliable backend services, React interfaces, and data-intensive platforms across fintech and enterprise environments. Delivers clean, testable code, observability-driven monitoring, and cross-functional collaboration from design through production. Experienced in high-throughput event pipelines, automated testing, and UI tooling that surfaces system health and performance for engineering and business stakeholders.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Built and maintained full-stack features in **Go and React/TypeScript**, delivering portfolio analytics and reporting workflows used across **40+ investment teams** with emphasis on clean, maintainable code.
- Designed reusable UI components and operational dashboards that give engineering and business users **real-time visibility into system behavior, batch latency, and exception queues**.
- Owned backend services for **event ingestion and measurement pipelines** processing millions of daily tracking events with idempotent writes, schema validation, and strict data accuracy controls.
- Partnered with platform engineers to enhance observability through **OpenTelemetry instrumentation, structured logging, New Relic alerts, and Grafana dashboards**, reducing mean time to detection for production anomalies.
- Expanded automated test coverage across API and UI layers using **Jest, React Testing Library, and integration suites**, strengthening release confidence for weekly production deployments.
- Led code reviews and technical design discussions, aligning product, QA, and engineering partners on **reliability, usability, and maintainable architecture** for scoped feature delivery.
- Implemented pixel and tag delivery endpoints plus server-side conversion hooks supporting **campaign attribution, tracking, and performance measurement** for client-facing analytics tools.
- Contributed to ML-assisted anomaly detection on throughput metrics, surfacing drift in **high-volume data streams** before downstream reporting and reconciliation impact.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java and Python microservices** for trade reporting and reference data APIs, emphasizing operational excellence and deterministic retry behavior under peak batch windows.
- Built internal **React dashboards** for operations teams to monitor system behavior, queue depth, and SLA adherence across risk and compliance pipelines.
- Contributed to observability initiatives by adding **metrics instrumentation, alert thresholds, and runbooks** that shortened incident triage during on-call rotations.
- Authored unit and contract tests within CI pipelines, helping the squad raise **automated coverage** on critical settlement and reconciliation paths.
- Collaborated with business analysts and infrastructure teams to scope requirements, refine designs, and ship features on schedule across **cross-functional quarterly releases**.
- Supported data validation jobs ensuring **ledger and transaction integrity** across upstream clearing interfaces and downstream reporting systems.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **REST endpoints and React views** for inventory and order flows, writing unit tests that stabilized iterative feature delivery throughout the internship.

- Assisted senior engineers in adding logging and health checks to Node services, improving **basic observability** for staging and pre-production environments.
- Participated in code reviews and paired on bug fixes, applying **maintainable patterns** for component reuse, API error handling, and consistent coding standards.
- Delivered a reporting widget surfacing operational metrics, giving managers **visibility into daily transaction volumes** and workflow bottlenecks.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built responsive landing pages and client intake forms with **HTML, CSS, and JavaScript**, ensuring cross-browser compatibility for nonprofit campaign sites.
- Integrated lightweight **analytics tags** to capture visitor engagement events and support foundation outreach measurement.
- Optimized page load performance through asset minification and caching, improving **time-to-interactive** on content-heavy pages.
- Collaborated with stakeholders to translate branding requirements into **accessible, maintainable front-end implementations**.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, component design, responsive UI, React Testing Library, Jest

Backend: Go, Python, Java, Node.js, REST APIs, microservices, event-driven architecture, pixel and tag delivery endpoints

Databases: PostgreSQL, MySQL, Redis, MongoDB, schema validation, idempotent write patterns

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, GitHub Actions, Terraform, automated deployment pipelines

Monitoring & Tools: OpenTelemetry, New Relic, Grafana, Looker, Sentry, structured logging, alerting, dashboards

Workflow & PM: Agile/Scrum, Jira, code review, cross-functional delivery, technical design documentation, stakeholder alignment
