PROFESSIONAL SUMMARY

Full stack engineer with 7+ years building production Python services, React applications, and LLM-integrated workflows across finance and SaaS platforms. Designs REST and GraphQL APIs, event-driven integrations, and observable agentic systems on AWS. Partners with product, UX, and engineering teams to ship secure, testable features through iterative agile delivery.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and maintained **production Python microservices** exposing REST and GraphQL APIs for portfolio analytics and trading operations, supporting 40+ internal consumers across 3 product teams.
- Built **LLM-powered RAG pipelines** using OpenAI and LangChain to surface fund documentation insights, combining retrieval layers, prompt guardrails, and human review checkpoints for analyst workflows.
- Implemented **agentic workflow orchestration** connecting internal data sources, third-party market feeds, and tool APIs into reliable, observable automation for recurring reporting tasks.
- Translated Figma and design-system specs into **responsive React interfaces** with reusable component libraries, wiring API state management and accessibility patterns for analyst-facing dashboards.
- Designed **event-driven integrations** with message queues and webhooks for asynchronous settlement and reconciliation flows, improving downstream processing reliability across distributed services.
- Established **CI/CD pipelines on AWS** with containerized deployments, infrastructure-as-code templates, and automated unit/integration test gates for secure release of AI-enabled workloads.
- Applied **OAuth/OIDC and RBAC authorization** patterns across APIs and frontend routes, partnering with security stakeholders to meet compliance requirements for sensitive financial data.
- Led **code reviews and engineering standards** for testable Python and TypeScript modules, mentoring 2 junior engineers on API design, observability practices, and iterative delivery workflows.
- Diagnosed **full-stack production incidents** using structured logging, metrics, and distributed tracing to restore service availability and prevent recurrence across backend and React layers.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Python backend services** for risk and treasury platforms, delivering REST APIs consumed by trading desk applications and downstream reporting systems.
- Integrated **external vendor APIs and internal data warehouses** via scheduled batch jobs and event notifications, enabling timely credit exposure calculations across global desks.
- Contributed to **GraphQL and REST API design** discussions with senior architects, implementing schema changes and versioning strategies for cross-team platform consumers.
- Built **React dashboards** for operations teams, implementing wireframe-driven UI components and role-based views aligned with firm-wide design guidelines.
- Wrote **unit and integration tests** in Python and JavaScript test suites, participating in peer code reviews to uphold readability and secure coding standards.
- Deployed services to **AWS cloud environments** using container images and automated release pipelines, coordinating with DevOps on environment promotion and rollback procedures.
- Collaborated in **agile sprints** with product owners and business analysts in Jira, breaking down regulatory requirements into shippable increments across 4+ quarterly releases.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **Python Flask APIs** supporting mobile payment workflows, connecting receipt digitization features to PostgreSQL-backed transaction records.
- Built **React Native and web components** from product mockups, integrating REST endpoints for user authentication and check-splitting flows.
- Added **automated test coverage** for critical API endpoints and frontend state logic, reducing regression risk during weekly release cycles.
- Configured **logging and error monitoring** for staging environments, helping engineers trace integration failures between payment processors and application services.
- Participated in **code reviews and sprint planning**, documenting API contracts and onboarding notes for incoming team members.
- Supported **CI pipeline improvements** for build verification and lint checks, accelerating feedback for the 4-person engineering team.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **responsive web pages** for a nonprofit fundraising site using HTML, CSS, and JavaScript aligned to stakeholder content requirements.
- Integrated **third-party donation APIs** and form handlers, enabling secure payment capture and confirmation flows for online campaigns.
- Optimized **page load performance** through asset minification and caching strategies, improving mobile usability for event registration traffic.
- Coordinated with **remote stakeholders** on iterative design revisions, shipping weekly updates across the two-month engagement.
- Documented **deployment and content update procedures** for volunteer maintainers, ensuring continuity after project handoff.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5/CSS3, Tailwind CSS, Responsive Design, Component Libraries, Accessibility (WCAG), Redux, Figma-to-Code

Backend: Python, Flask, FastAPI, REST APIs, GraphQL, LangChain, OpenAI APIs, AWS Bedrock, Microservices, Event-Driven Architecture

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL, NoSQL, Data Modeling, Query Optimization

Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, CloudFormation, CI/CD, GitHub Actions, Infrastructure-as-Code, Container Orchestration

Monitoring & Tools: Structured Logging, Metrics, Distributed Tracing, Datadog, OAuth/OIDC, RBAC, Git, Jest, Pytest

Workflow & PM: Agile/Scrum, Jira, Confluence, Iterative Delivery, Cross-Functional Collaboration, Code Reviews, Technical Documentation
