

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years building enterprise platforms across financial services and investment technology. Owns end-to-end delivery spanning React interfaces, Python and Java services, and cloud-native infrastructure. Experienced architecting API-driven microservices, enterprise integrations, and workflow-centric applications. Hands-on IC who accelerates delivery through AI-assisted development while maintaining production-grade quality, testing discipline, and scalable system design.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered an **end-to-end full stack platform** consolidating fragmented portfolio workflows into a unified SaaS experience used by 40+ investment teams across front, middle, and back office functions.
- Designed and built **React application layers** and Python microservices handling 2M+ API requests daily, applying caching and modular domain boundaries to sustain sub-200ms response times under peak load.
- Owned **REST and event-driven service contracts** connecting portfolio analytics, compliance reporting, and external data vendors, reducing manual reconciliation effort across downstream artifact generation by 35%.
- Led integration of **AI-assisted workflow modules** including structured evaluation forms and intelligent recommendations, enabling analysts to triage and export decision artifacts with measurably faster turnaround.
- Established **CI/CD pipelines, observability, and deployment standards** across 12 microservices on AWS, improving release cadence from bi-weekly to daily while maintaining zero-downtime rollout practices.
- Partnered with product and stakeholders in an **embedded delivery model**, translating evolving workflow requirements into scalable backend schemas, authorization controls, and reusable UI component libraries.
- Drove **engineering quality practices** including peer code reviews, automated test coverage above 80%, and architecture documentation adopted across three feature squads.
- Mentored junior engineers on **full stack system design**, API performance tuning, and production debugging, raising team delivery throughput without compromising maintainability.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Built **enterprise full stack applications** supporting trading, risk, and client reporting workflows for a global banking platform spanning 200+ internal users across multiple business lines.
- Developed **Java and Python backend services** with SQL persistence layers for high-volume transaction processing, applying domain-driven module boundaries to support regulatory auditability.
- Implemented **React dashboard interfaces** and GraphQL APIs enabling real-time visibility into operational metrics, cutting time-to-insight for desk supervisors through self-serve analytics views.
- Integrated **enterprise data pipelines** and third-party market data feeds into centralized reporting modules, reducing duplicate ETL jobs and improving data consistency across downstream consumers.
- Contributed to **authentication, authorization, and governance controls** aligned with financial services security standards, securing API endpoints and role-based access across sensitive client datasets.
- Designed **asynchronous messaging workflows** using queue-based patterns to decouple batch settlement jobs from interactive user flows, improving system resiliency during end-of-day processing peaks.
- Collaborated with cross-functional teams in a **forward-deployed capacity**, shipping iterative feature releases while maintaining modular architecture suited to rapidly changing regulatory requirements.
- Optimized **database queries and service performance** across production workloads, resolving latency bottlenecks that had impacted critical end-of-day reporting SLAs.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **full stack web features** using React and Node.js for a compliance tracking product, contributing components adopted across the core customer workflow.
- Built **REST APIs and data models** supporting structured form submission and exportable artifacts used by operations teams for downstream audit review.
- Implemented **responsive UI components** and client-side validation patterns that improved form completion rates and reduced support tickets tied to user input errors.
- Participated in **code reviews and automated testing**, learning team standards for modular architecture, error handling, and deployment readiness in a remote engineering environment.
- Collaborated with product to translate **workflow requirements** into iterative releases, delivering three production features within internship milestones.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **client-facing web pages** and content management integrations for a nonprofit foundation site using HTML, CSS, and JavaScript.
- Implemented **responsive layouts** improving mobile accessibility for donor and program information across primary site sections.
- Configured **hosting and deployment workflows** enabling stakeholders to publish updates without developer intervention for routine content changes.
- Delivered **accessibility and performance improvements** that aligned site navigation with stakeholder content priorities ahead of launch deadlines.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Angular, Responsive UI, Component Architecture, State Management

Backend: Python, Java, Node.js, REST, GraphQL, Microservices, Event-Driven Architecture, Domain-Driven Design

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL Modeling, NoSQL, Query Optimization, Data Persistence Layers

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Terraform, API Gateway, Cloud-Native Deployment, Infrastructure as Code

Monitoring & Tools: Datadog, Grafana, Prometheus, Git, Claude AI, Postman, Swagger, VS Code

Workflow & PM: Agile/Scrum, Stakeholder Collaboration, Technical Design Docs, Embedded Delivery, Jira, Confluence
