

Ryan Cho

Product Engineer | Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building cloud-native digital products across financial services and fintech. Expert in Java, Spring Boot, React, and TypeScript with hands-on experience designing microservices, event-driven architectures, and RESTful APIs on AWS and Azure. Proven track record delivering scalable user experiences, CI/CD pipelines, and production support with TDD and pair programming practices. Strong collaborator across product and engineering teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led design and delivery of **full stack platform features** using **Java 17**, **Spring Boot 3**, **React**, and **TypeScript**, supporting portfolio operations across **AWS** and **Azure** cloud environments
- Architected **event-driven microservices** with **Apache Kafka** and **REST APIs**, decoupling portfolio valuation and trade settlement workflows across distributed service boundaries
- Built responsive, **data-driven user experiences** with **React** and **Redux Toolkit**, implementing accessible UI patterns that streamlined analyst workflows across multi-asset portfolio screens
- Established **CI/CD pipelines** via **Jenkins** and **GitHub Actions** with **Docker** and **Kubernetes**, enabling reliable continuous delivery across staging and production clusters
- Practiced **test-driven development** and **pair programming** daily, expanding automated test coverage on core trading modules and reducing regression defects before release
- Owned **production support** and **JVM performance tuning** for backend services, diagnosing latency issues with **Datadog** and restoring availability during pricing pipeline incidents
- Partnered with product managers on **iteration planning** and backlog refinement, translating acceptance criteria into technical designs adopted across cross-functional engineering squads
- Integrated **MongoDB** and relational data stores for portfolio analytics, standardizing **OpenAPI** and **JSON** contracts consumed by downstream reporting services
- Mentored engineers on **systems design**, secure development, and microservice decomposition, strengthening team-wide engineering standards and onboarding practices

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java** and **Spring Framework** services supporting trading operations and **regulatory compliance** workflows for institutional banking clients across globally distributed teams
- Built **RESTful APIs** and backend integrations connecting legacy platforms with **microservices**, enabling real-time data synchronization across risk and reporting systems
- Contributed to internal dashboards using **React.js**, **TypeScript**, and **AngularJS**, delivering **accessible**, data-driven interfaces for operations and compliance analysts
- Implemented **continuous integration** workflows with **Jenkins** and **GitHub**, automating build validation and streamlining release preparation across multiple application pipelines
- Provided **production support** during market hours, troubleshooting JVM performance issues and coordinating incident response with infrastructure and application teams
- Participated in **TDD** and **pair programming** within agile squads, improving code quality on payment reconciliation and settlement services
- Designed data access layers across **relational and NoSQL** databases including **MongoDB**, optimizing query patterns for high-volume transaction reporting workloads

- Documented **system architectures** and API specifications using **OpenAPI** and **JSON** standards, enabling clearer cross-team collaboration with digital product groups

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React.js** components and **TypeScript** utilities for customer-facing web applications, improving checkout flow responsiveness across desktop and mobile viewports
- Implemented **Redux Toolkit** state management for order tracking features, reducing redundant API calls and simplifying component data flow
- Wrote unit tests following **test-driven development** with Jest, increasing coverage on payment validation and cart management modules
- Containerized development environments with **Docker**, aligning local setups with production **CI/CD** configurations used by the engineering team
- Collaborated in **pair programming** sessions with senior engineers to debug **REST API** integrations and refine error handling across service boundaries
- Participated in agile ceremonies including standups and retrospectives, delivering sprint commitments for inventory and fulfillment features

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed responsive **web pages** using **HTML**, **CSS**, and **JavaScript** for nonprofit digital initiatives, supporting content updates across foundation outreach programs
- Integrated **RESTful API** consumers to display dynamic program data, improving information access for community stakeholders
- Collaborated remotely with designers to implement **accessible UI** layouts aligned with organizational branding standards
- Performed cross-browser testing and bug fixes, stabilizing page load performance on mobile and desktop clients
- Maintained version-controlled codebases with **GitHub**, participating in code reviews and incremental feature releases

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, TypeScript, AngularJS, Redux Toolkit, HTML5, CSS3, Responsive Design, Accessible UX

Backend: Java 17+, Spring Boot 3.x, Spring Framework, Python, RESTful APIs, Microservices, Event-Driven Architecture, Apache Kafka

Databases: MongoDB, PostgreSQL, MySQL, NoSQL, JSON, OpenAPI, Schema Design, Performance Tuning

Cloud & DevOps: AWS, Microsoft Azure, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Container Orchestration

Monitoring & Tools: Datadog, JVM Performance Management, GitHub, Maven, Gradle, Application Troubleshooting

Workflow & PM: Agile/Scrum, TDD, Pair Programming, Iteration Planning, Cross-Team Collaboration, Production Support
