PROFESSIONAL SUMMARY

Senior software engineer with 8+ years building production backend systems, secure APIs, and platform services across financial and enterprise environments. Expert in C#, .NET, authentication and authorization, and distributed system design with hands-on AWS and SQL experience. Partners with product and engineering teams to deliver scalable account management, internal tooling, and CI/CD pipelines while mentoring engineers and driving cross-team architecture decisions.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Designed and shipped **authentication and authorization services** supporting role-based access across internal portfolio and reporting platforms used by fund operations teams.
- Built **RESTful APIs in C# and ASP.NET Core** for account management, subscription workflows, and document delivery, consolidating three legacy integration paths into a single platform surface.
- Established **reusable platform patterns** for service communication, error handling, and request validation adopted by multiple engineering squads, improving consistency for new feature delivery.
- Partnered with product and risk stakeholders to harden **distributed transaction flows** across custody and reporting systems, improving end-to-end reliability for month-end close processing.
- Led migration of critical batch workloads to **AWS-hosted services** with automated deployment pipelines, reducing release cycle time and environment drift between staging and production.
- Optimized **SQL queries and relational schemas** for high-volume holdings and cash-activity tables, resolving latency bottlenecks in executive reporting dashboards.
- Improved **developer experience** through shared libraries, reference implementations, and self-service CLI tooling that accelerated API integration for downstream teams.
- Mentored **junior and mid-level engineers** through design reviews, pairing sessions, and AI-assisted development workflows, raising code review throughput while maintaining quality standards.
- Identified and reduced **operational risk** across platform services by introducing resiliency testing, observability dashboards, and structured incident postmortems with actionable remediation tracking.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed and maintained **C# backend services** for trade capture and operational reporting within a globally distributed banking platform.
- Implemented **API security controls** including token validation, scoped authorization rules, and audit logging for compliance-sensitive financial workflows.
- Collaborated with cross-functional teams in **Agile sprints** to deliver enhancements to account lifecycle and permissions management tooling.
- Built **SQL Server stored procedures and data pipelines** supporting reconciliation and regulatory reporting with strict accuracy requirements.
- Contributed to **CI/CD pipeline improvements** using Git-based workflows, automated testing gates, and deployment orchestration across multiple environments.
- Diagnosed production incidents across **distributed services**, documenting root causes and driving fixes that reduced repeat operational risk.
- Supported **knowledge transfer and training** for analyst rotations, creating runbooks and reference documentation for core platform components.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React.js interfaces** for restaurant inventory workflows, integrating with backend APIs to streamline nightly reconciliation for venue managers.
- Implemented **REST API endpoints in .NET** for check and payment tracking features used in pilot deployments across New York hospitality clients.
- Wrote **unit and integration tests** covering authentication flows and data validation logic, improving confidence in weekly release cadence.
- Participated in **code reviews and Agile ceremonies**, contributing refactors that simplified shared utility modules and reduced duplicate API calls.
- Assisted in **Git-based branching workflows** and pipeline configuration, helping the team adopt consistent merge and deployment practices.
- Resolved **SQL performance issues** in reporting queries by indexing key lookup columns and restructuring joins for order history views.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **responsive web pages** for nonprofit fundraising campaigns using HTML, CSS, and JavaScript with cross-browser compatibility.
- Integrated **third-party donation APIs** and form validation to support secure contributor data capture during a seasonal giving drive.
- Collaborated with stakeholders to translate **content requirements** into maintainable front-end components within a tight delivery window.
- Configured **basic authentication gates** for internal admin views, enabling staff-only access to donor reporting summaries.
- Used **Git version control** for feature branches and peer review, supporting a small remote team's first structured development workflow.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, TypeScript, JavaScript, HTML, CSS

Backend: C#, .NET, ASP.NET Core, REST APIs, API Design, Authentication & Authorization

Databases: SQL Server, PostgreSQL, Relational Schema Design, Query Optimization

Cloud & DevOps: AWS, Docker, CI/CD, Git, Automated Deployment Pipelines

Monitoring & Tools: Observability, Unit Testing, Integration Testing, Resiliency Patterns, Incident Response

Workflow & PM: Agile, Mentorship, Code Review, Technical Leadership, Cross-Team Collaboration
