PROFESSIONAL SUMMARY

Full stack engineer with 7+ years delivering scalable web applications across finance and SaaS. Leads development across React and TypeScript frontends, Python and NestJS backends, and MySQL/NoSQL data layers. Mentors engineers, drives code quality through reviews, and ships production features within Agile and DevOps workflows including Docker and Terraform.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led full-stack delivery of a **portfolio analytics platform** used by institutional trading teams, architecting **React and TypeScript** modules that shortened feature release cycles across three product areas.
- Built **REST and WebSocket services** in **Python and NestJS** to stream market and position data with low-latency delivery to downstream dashboards and alerting systems.
- Designed **Prisma data models** and **MySQL migration workflows** for high-volume transactional pipelines while preserving backward-compatible schema changes during quarterly releases.
- Established **code review standards** and mentored **four engineers** on modular, maintainable patterns, improving team pull request velocity and reducing recurring production defects.
- Translated **user stories** into technical designs within **Agile sprint ceremonies**, partnering with product, QA, and operations through design, development, deployment, and production support.
- Containerized services with **Docker** and automated infrastructure provisioning through **Terraform and AWS ECS**, enabling repeatable deployments and faster rollback during incidents.
- Delivered responsive UI with **Tailwind CSS** and shared component libraries for trading dashboards, improving layout consistency and accessibility across desktop and mobile views.
- Introduced **NoSQL caching** for read-heavy analytics endpoints, reducing database load and improving API responsiveness during peak market hours.
- Partnered with stakeholders on **cross-team API contracts** and integration testing, ensuring new services met reliability expectations before firm-wide rollout.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **internal banking applications** in **JavaScript and TypeScript** supporting trade operations, regulatory reporting, and reconciliation workflows across multiple business units.
- Built **HTML/CSS interfaces** and backend services connected to **MySQL** databases, enabling analysts to generate compliance reports with validated, auditable data outputs.
- Delivered features from **user story** refinement through production support within **Agile** sprints, coordinating with business analysts and QA on acceptance criteria.
- Automated recurring data reconciliation tasks in **Python**, replacing manual spreadsheet workflows and improving processing reliability for daily operations teams.
- Contributed to **Docker-based development environments** that standardized local setup and reduced onboarding friction for incoming technology analysts.
- Participated in **code reviews** and shared frontend utilities adopted by engineers across the technology group for consistent UI behavior.
- Supported **DevOps release activities**, including deployment verification and post-release monitoring for business-critical financial applications.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React components** for a document verification platform used by restaurant operators to manage compliance records and inspection workflows.
- Developed **JavaScript** features and API integrations on **Node.js** services, resolving defects identified during QA and user acceptance testing.
- Assisted with **MySQL** schema updates and seed scripts to keep staging environments aligned with production data structures.
- Built responsive **HTML/CSS** layouts from design specifications, ensuring consistent rendering across common browser and device combinations.
- Collaborated in **Agile standups** and documented implementation notes to support handoff to full-time engineering staff.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **JavaScript and HTML/CSS** pages for a nonprofit fundraising website, translating stakeholder content into deployable, mobile-friendly layouts.
- Integrated third-party donation APIs with **form validation** and error handling to improve submission reliability for online contributors.
- Optimized **front-end assets** through minification and lazy loading, improving page performance scores and reducing initial load time for key landing pages.
- Coordinated remotely with **project leads** to iterate on site structure and deliver updates within short release windows.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Vite.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, shadcn/ui, Responsive Design

Backend: Python, NestJS, Node.js, Prisma, REST APIs, WebSockets

Databases: MySQL, NoSQL, PostgreSQL, Redis, Schema Design, Query Optimization

Cloud & DevOps: AWS, Docker, ECS, Terraform, CI/CD, Containerization

Monitoring & Tools: Git, Jest, Postman, Swagger, Logging, Performance Profiling

Workflow & PM: Agile, Scrum, User Stories, Code Reviews, Mentorship, Jira, Cross-Functional Collaboration
