PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building Node.js and React applications on AWS for high-volume financial and operational systems. Expert in RESTful API design, cloud data pipelines, legacy modernization, and batch transaction processing. Proven track record delivering scalable integrations, document workflows, and production services with Git-based CI/CD across remote cross-functional teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led **full stack development** of Node.js services and React dashboards supporting capital operations workflows used by **200+ internal stakeholders** across three business units.
- Architected and deployed **AWS cloud infrastructure** including Lambda, S3, and API Gateway to deliver RESTful microservices sustaining sub-second response times for **10,000+ daily transactions**.
- Built **cloud-based data pipelines** that ingest, validate, and transform structured batch records from legacy upstream systems into modern application stores with full audit traceability.
- Designed **RESTful integration layers** connecting internal platforms with external vendor APIs, automating reconciliation workflows and reducing manual processing effort by an estimated 35%.
- Migrated **legacy monolithic components** to containerized Node.js services on AWS, cutting average deployment cycles from two weeks to three days across concurrent modernization efforts.
- Implemented **Git-based CI/CD pipelines** with branch protection and automated testing, standardizing release practices for a team of six engineers.
- Developed **document generation and batch output workflows** producing formatted compliance reports and official certificates distributed through automated print and digital delivery channels.
- Mentored two junior engineers on **React component architecture**, API contract design, and AWS deployment patterns while partnering with product and operations leads on technical scoping.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Node.js application services** and React front-end modules for internal banking tools supporting trade operations and client reporting across four global business lines.
- Implemented **AWS cloud solutions** including EC2, RDS, and S3 for application hosting, data storage, and environment provisioning across development and production tiers.
- Built **RESTful APIs** exposing financial data entities with standardized validation, transformation, and lifecycle tracking consumed by eight downstream applications.
- Supported **high-volume batch processing systems** handling 12,000+ daily transactions including fee processing, remittance handling, and end-of-day reconciliation workflows.
- Integrated applications with **legacy mainframe and billing systems** through structured file exchanges and API adapters, preserving data integrity during platform transitions.
- Established **Git workflows** with feature branching, pull request reviews, and release tagging adopted across a twelve-person technology team.
- Contributed to **legacy system modernization initiatives** replacing manual operational workflows with automated cloud-based processing pipelines and self-service admin interfaces.
- Collaborated with business analysts and compliance stakeholders to deliver **transaction validation rules** and audit-ready logging for regulated financial record keeping.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React components** and interactive UI flows for a web-based inventory management platform serving 40+ restaurant clients.
- Developed **Node.js REST endpoints** for CRUD operations and authentication, integrating with a PostgreSQL backend.
- Used **Git** for version control and participated in biweekly code reviews within an agile sprint cadence.
- Assisted in **AWS deployment** configuration for staging environments using Elastic Beanstalk and S3 artifact storage.
- Wrote unit tests for **API validation logic** and front-end state management modules, increasing test coverage for core modules by 25%.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **React-based web pages** and reusable UI components for a nonprofit foundation public-facing website.
- Implemented **RESTful service calls** to backend APIs for content management and form submission workflows.
- Managed source code with **Git** and coordinated updates through pull request reviews with a remote team.
- Configured **responsive layouts** and accessibility improvements that increased mobile session duration by 20%.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript, TypeScript, HTML5, CSS3, Redux, Material UI, Responsive Design

Backend: Node.js, Express, RESTful API Design, Microservices, Batch Processing, Authentication & Authorization

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL Query Optimization

Cloud & DevOps: AWS (Lambda, S3, EC2, API Gateway, RDS, CloudFormation), Docker, CI/CD, Git, GitHub Actions

Monitoring & Tools: CloudWatch, Datadog, Jest, Mocha, Postman, Swagger/OpenAPI

Workflow & PM: Agile/Scrum, Jira, Confluence, Technical Design Documentation, Cross-functional Collaboration
