PROFESSIONAL SUMMARY

Senior full stack engineer with 7+ years building cloud-native applications, RESTful integrations, and workflow automation across financial services and capital markets. Skilled in Python, Java, TypeScript, and C# on AWS and Azure. Leverages AI-assisted development to accelerate delivery while validating code quality, testing, and production readiness. Partners with product and QA to ship iterative releases that streamline complex business workflows.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led design and delivery of **full stack lending platform features** spanning React TypeScript frontends, Python microservices, and PostgreSQL data layers supporting internal underwriting teams across **15+ workflow stages**
- Architected **RESTful API integrations** with third-party credit bureaus, document vendors, and payment processors, reducing manual data entry across loan origination pipelines by **40%**
- Built **cloud-native automation services** on AWS Lambda and ECS that orchestrate document validation, compliance checks, and status notifications for **500+ daily loan applications**
- Implemented **CI/CD pipelines** with automated testing and staged AWS/Azure deployments, cutting release cycle time from two weeks to **3–4 days** while maintaining production stability
- Integrated **AI-assisted development workflows** into team practices—using codegen tools for boilerplate generation while conducting rigorous review, security scanning, and integration testing before merge
- Partnered with product managers and QA engineers to define acceptance criteria, iterate on borrower-facing interfaces, and deliver features through **continuous delivery** cadences aligned to business priorities
- Optimized SQL queries and Redis caching for portfolio reporting dashboards, improving **query response times by 60%** for analysts monitoring loan performance metrics
- Mentored two junior engineers on **API design patterns**, test coverage strategies, and cloud deployment practices during a platform modernization initiative
- Designed an **event-driven notification system** using message queues that synchronizes loan status updates across CRM, email, and internal ops tooling with **99.9% delivery reliability**

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed and maintained **Java and C# backend services** supporting trade settlement, risk reporting, and client onboarding workflows for wholesale banking operations
- Built **RESTful APIs** connecting internal treasury systems with external market data vendors and regulatory reporting platforms across hybrid cloud infrastructure
- Contributed to **Azure cloud migration** of legacy .NET applications, containerizing services and establishing infrastructure-as-code templates for repeatable environment provisioning
- Collaborated with operations, compliance, and QA teams to deliver features through **iterative sprint cycles** backed by automated regression testing suites
- Implemented database schema changes and ETL pipelines in **SQL Server and Oracle**, enabling faster batch processing for daily reconciliation jobs handling **millions of transactions**
- Created internal tooling using **Python scripts** and Groovy-based build automation that reduced deployment preparation time for release managers by **30%**
- Participated in production incident response and root-cause analysis, improving monitoring dashboards and alert thresholds for **critical payment processing services**

- Supported **third-party integration testing** for SWIFT messaging and custody platforms, ensuring API contract compliance before production rollout
- Assisted senior engineers in designing middleware components that standardize authentication, logging, and error handling across **12+ microservices**

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React and JavaScript features** for a mobile check-deposit workflow application used by restaurant partners to automate deposit tracking and reconciliation
- Developed **Node.js REST endpoints** for user authentication, transaction history, and notification preferences consumed by iOS and web clients
- Wrote unit and integration tests using Jest and Cypress, increasing **test coverage to 75%** on core payment submission modules
- Collaborated with senior developers in Agile standups to troubleshoot production bugs and deploy hotfixes through **Git-based continuous integration** pipelines
- Refactored legacy jQuery components into reusable React hooks, improving page load performance and **reducing bundle size by 20%**
- Documented **API contracts** and onboarding guides that accelerated new engineer ramp-up on the engineering team

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Designed and launched a **responsive WordPress website** for a nonprofit foundation, improving donor engagement and event registration workflows
- Implemented custom **PHP and JavaScript plugins** for donation forms integrated with third-party payment gateway APIs
- Optimized site performance through caching, image compression, and CDN configuration, achieving **sub-2-second page loads**
- Coordinated with foundation leadership to translate content requirements into **accessible, mobile-first user interfaces**
- Maintained content management workflows and deployed security patches on schedule throughout the **3-month engagement**

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: JavaScript, TypeScript, React, HTML5, CSS3, Responsive Design, Component Architecture

Backend: Python, Java, C#, Node.js, Groovy, RESTful APIs, Microservices, Event-Driven Architecture

Databases: PostgreSQL, SQL Server, Oracle, MongoDB, Redis, Query Optimization, ETL Pipelines

Cloud & DevOps: AWS (Lambda, ECS, S3), Microsoft Azure, Docker, Kubernetes, CI/CD, Infrastructure as Code

Monitoring & Tools: Datadog, Splunk, Git, GitHub Actions, Jest, Cypress, AI-Assisted Development Tools (GitHub Copilot, Cursor)

Workflow & PM: Agile, Scrum, Jira, Confluence, Cross-Functional Collaboration, Continuous Delivery, Technical Documentation
