

Ryan Cho

Senior Python Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years building secure financial platforms across Python backends and modern Angular frontends. Deliver production Django REST services, MySQL data layers, and AWS-hosted applications using IaC and automated Pytest coverage. Experienced across Linux environments, SCRUM delivery, and cross-functional roles spanning development, testing, and security-focused tooling.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered a **Django REST Framework** portfolio analytics platform serving 200+ internal users, replacing legacy spreadsheet workflows with secure, auditable API endpoints backed by **MySQL** schemas and optimized ORM query patterns.
- Led migration of investor-facing dashboards to **Angular v17**, establishing component libraries, lazy-loaded modules, and reactive forms that reduced page load times by 35% while improving accessibility across desktop and tablet clients.
- Deployed containerized services on **AWS ECS** with **Lambda**-triggered batch jobs and **RDS MySQL** instances, provisioning environments through **CloudFormation** and Terraform modules to enforce consistent, repeatable infrastructure across staging and production.
- Built a comprehensive **Pytest** suite covering unit, integration, and API contract tests, raising backend coverage above 85% and integrating suites into Linux-based CI pipelines to catch regressions before release.
- Implemented **PKI certificate lifecycle tooling** for service-to-service authentication, automating key rotation and trust-store updates to strengthen platform security without disrupting trading-day operations.
- Partnered with product, compliance, and operations stakeholders in **SCRUM** ceremonies to prioritize roadmap items, translate regulatory requirements into technical designs, and deliver biweekly releases with zero critical production incidents over 12 months.
- Optimized **Linux** deployment scripts and shell-based automation for log aggregation, health checks, and rollback procedures, reducing mean time to recovery during incident response from hours to under 30 minutes.
- Mentored three junior engineers on **full stack development** practices, code review standards, and test-driven workflows, elevating team velocity and establishing shared patterns for Django services and Angular feature modules.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Python 3.x** microservices for trade surveillance and risk reporting pipelines, processing high-volume market data feeds and exposing REST endpoints consumed by downstream analytics and compliance teams.
- Engineered internal **security software** utilities for credential validation, access auditing, and encrypted data handling, aligning implementations with bank-wide information security policies and regulatory audit requirements.
- Designed and maintained **MySQL** relational schemas and stored procedures supporting daily reconciliation jobs, improving query performance on multi-million-row datasets through indexing strategies and batch optimization.
- Contributed to **Angular** operational dashboards used by desk analysts, implementing data grids, filtering, and real-time status indicators connected to backend APIs for monitoring batch job health and exception queues.
- Automated regression and integration testing with **Pytest** and custom test harnesses, alternating between developer and QA responsibilities within Agile sprints to validate releases across Linux server environments.
- Provisioned and managed **AWS** resources including Lambda functions and RDS instances for non-production workloads, applying Infrastructure as Code templates to standardize environment setup across global technology

teams.

- Collaborated across front-office, middle-office, and infrastructure groups in **SCRUM** delivery cycles, translating business requirements into technical specifications and delivering features on schedule through three consecutive analyst rotations.
- Supported production incident triage and root-cause analysis for trading technology systems, using Linux command-line diagnostics and structured logging to isolate failures and coordinate timely remediation with on-call engineers.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **Python** backend endpoints and RESTful services for a hospitality management platform, integrating third-party APIs and validating payloads with structured error handling and logging.
- Developed responsive **Angular** UI components for staff scheduling and inventory views, connecting frontend forms to backend services and ensuring consistent data binding across application modules.
- Wrote **Pytest** unit tests for service-layer business logic and API handlers, contributing to early adoption of automated testing practices within the intern engineering team.
- Configured **MySQL** tables and migration scripts for new product features, working with senior engineers to normalize schemas and enforce referential integrity across core domain entities.
- Assisted with **Linux** server deployment tasks and Git-based release workflows, gaining hands-on experience with command-line tooling, environment configuration, and version control branching strategies.
- Participated in **Agile** standups, sprint planning, and code reviews, delivering assigned stories on schedule while documenting technical decisions for knowledge transfer to full-time team members.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered a nonprofit fundraising website using **HTML, CSS, and JavaScript**, implementing responsive layouts and donation flows optimized for mobile and desktop visitors.
- Integrated a lightweight **Python** backend for form submissions and email notifications, validating user input server-side and routing messages to foundation staff through secure SMTP configuration.
- Configured **MySQL** storage for donor records and campaign tracking, designing normalized tables and basic reporting queries used by foundation administrators for outreach planning.
- Deployed the application on a **Linux** VPS with Git-based updates, documenting deployment steps and environment variables to enable smooth handoff to maintainers after the engagement ended.
- Collaborated with foundation leadership to gather requirements, iterate on design feedback, and launch the site on schedule ahead of a major fundraising event.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: Angular v17+, TypeScript, HTML5, CSS3, Responsive UI, Component Architecture, Reactive Forms

Backend: Python 3.x, Django 4.x, Django REST Framework, RESTful APIs, Microservices, PKI Key Management

Databases: MySQL, RDS, SQL Schema Design, ORM Optimization, Stored Procedures, Data Migration

Cloud & DevOps: AWS (Lambda, ECS, RDS, CloudFormation), Terraform, Infrastructure as Code, Linux OS, Docker, CI/CD Pipelines

Monitoring & Tools: Pytest, Git, Shell Scripting, Structured Logging, Automated Testing, Version Control

Workflow & PM: SCRUM, Agile Methodology, Cross-Functional Collaboration, Code Review, Technical Documentation
