

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 8 years delivering scalable backend services and React interfaces across financial and investment platforms. Deep expertise in Java, Kotlin, and JavaScript within service-oriented architectures managing mission-critical transactional data. Drives product ideas from prototype to production, mentors engineers, and partners with cross-functional teams to improve system reliability, code quality, and development standards.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **Java and Kotlin microservices** supporting investment order workflows, processing thousands of daily transactions with **99.9% uptime** across distributed service layers.
- Built **React.js dashboards** and internal tooling that consolidated portfolio analytics, reducing manual reconciliation time for operations teams by **40%**.
- Led **cross-functional prototyping** with product and design partners, translating validated concepts into production-grade APIs and frontend experiences within iterative release cycles.
- Designed **event-driven data pipelines** for real-time position and transaction storage, improving downstream reporting latency by **35%** while maintaining strict data integrity controls.
- Drove adoption of **coding standards, code review practices, and CI pipelines** that cut production defect rates by 25% and accelerated onboarding for new engineers.
- Mentored **three junior engineers** through structured pairing sessions and knowledge-sharing forums, elevating team delivery capacity and reducing review turnaround time.
- Partnered with stakeholders across risk, compliance, and business units to **align technical investments** with product roadmaps, delivering scalable solutions for post-trade processing flows.
- Implemented **observability and alerting** across critical services using metrics and distributed tracing, enabling proactive incident response and reducing mean time to recovery.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java backend services** within a large-scale service-oriented architecture supporting trade settlement and reference data systems serving institutional clients globally.
- Enhanced **mission-critical payment processing** modules, improving throughput by 30% through query optimization and asynchronous processing patterns.
- Collaborated with cross-functional teams to deliver **React-based internal portals** for operations workflows, streamlining access to transactional and account data.
- Contributed to **API design and versioning standards** for inter-service communication, reducing integration defects across 15+ downstream consumers.
- Participated in **on-call rotation** for high-availability banking systems, diagnosing production incidents and implementing resilient fallback mechanisms.
- Built automated **test suites and deployment pipelines** that increased release confidence and supported weekly production deployments with minimal rollback events.
- Translated business requirements from analysts and product owners into **technical specifications and prototypes**, accelerating feature delivery for regulatory reporting tools.
- Supported **knowledge sharing** through internal tech talks and documentation, helping onboard new analysts to the team's service ecosystem and development practices.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **JavaScript and React features** for a SaaS check-management platform, delivering responsive UI components used by restaurant clients nationwide.
- Integrated **RESTful backend APIs** with frontend state management, enabling real-time order status updates across mobile and web interfaces.
- Assisted in building **prototype features** for inventory tracking workflows, validating product concepts before full-scale engineering investment.
- Wrote **unit and integration tests** covering core business logic, contributing to a 20% reduction in regression bugs during sprint releases.
- Collaborated with senior engineers on **code reviews and Git workflows**, adopting team best practices for maintainable full stack development.
- Documented **API contracts and component libraries** to support knowledge transfer and faster feature development by subsequent intern cohorts.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** using HTML, CSS, and JavaScript for a nonprofit foundation site, improving mobile accessibility for donor engagement.
- Built **content management integrations** that enabled non-technical staff to publish updates independently, reducing dependency on external contractors.
- Optimized **page load performance** through asset minification and lazy loading, achieving measurable improvement in Lighthouse performance scores.
- Coordinated with stakeholders to gather requirements and deliver **iterative prototypes** aligned with foundation branding and outreach goals.
- Established **version control and deployment workflows** using Git, creating a foundation for sustainable site maintenance after role completion.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, JavaScript, TypeScript, HTML5, CSS3, Redux, Responsive Design

Backend: Java, Kotlin, Node.js, REST APIs, Microservices, Event-Driven Architecture

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Terraform, Jenkins

Monitoring & Tools: Datadog, Grafana, Prometheus, Git, Jira, Confluence

Workflow & PM: Agile/Scrum, Cross-functional Collaboration, Mentorship, Technical Leadership, Stakeholder Management
