

Ryan Cho

Software Engineer | Full-Stack Development & Scalable Applications

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full-stack software engineer with 8+ years delivering scalable, consumer-facing applications using React, Node.js, Python, and Java. Designs fault-tolerant REST APIs and highly available systems on AWS and GCP while leading agile sprint delivery, code reviews, and technical specifications. Experienced in regulated finance environments with strong ownership of architecture trade-offs, performance optimization, and mentoring associate engineers through the full software development lifecycle.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **full-stack SaaS features** serving 50K+ monthly active users, translating product mockups and user stories into production-ready React and Node.js applications with improved release reliability.
- Designed **RESTful API contracts** and JSON payload schemas adopted across three engineering squads, reducing integration defects by 35% and accelerating cross-team delivery timelines.
- Led **technical design reviews** and sprint planning within an agile Scrum team, driving story creation with acceptance criteria, DoD definitions, and Jira task breakdowns for 12+ engineers.
- Built **fault-tolerant backend services** in Python and Java using proven design patterns and optimized data structures to maintain sub-200ms p95 latency under 3x traffic spikes.
- Implemented **AWS cloud infrastructure** with auto-scaling, load balancing, and monitoring, improving system availability to 99.9% across consumer-facing digital channels.
- Conducted **code reviews** enforcing coding standards, unit testing, and maintainability guidelines that cut production bug escape rate by 40% over four consecutive releases.
- Mentored **two associate software engineers** on algorithms, debugging practices, and React architecture, enabling both to independently own feature epics within two quarters.
- Partnered with product stakeholders to evaluate **architectural trade-offs** between short-term execution and long-term platform scalability, influencing roadmap decisions for a modular service architecture.
- Optimized **NoSQL and relational query paths** across MongoDB and PostgreSQL, reducing database load by 28% and supporting real-time analytics for end-user dashboards.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **consumer-facing financial web applications** using React, JavaScript, HTML5, and CSS, delivering responsive interfaces aligned with enterprise UX standards across digital banking channels.
- Engineered **Java and Python microservices** exposing REST endpoints over HTTPS, processing 2M+ daily API requests with JSON payloads optimized for low-latency client consumption.
- Participated in the **full agile Scrum lifecycle** including standups, retrospectives, and backlog refinement, consistently completing committed story points across 20+ consecutive sprints.
- Authored **engineering specifications** and technical design documents for scalable, highly available systems, enabling peer review and smooth handoff between analyst and development teams.
- Managed **Git source control workflows** with branching strategies, build pipelines, and automated test gates that improved deployment confidence in a regulated financial environment.
- Collaborated with lead developers to **monitor production schedules**, report blockers to Scrum Masters, and provide weekly progress updates on critical regulatory reporting features.
- Applied **data structures and algorithm optimizations** to batch processing jobs, cutting overnight ETL runtime by 45% while preserving audit-grade data integrity requirements.

- Supported **GCP and AWS-hosted environments** by containerizing services and integrating CI/CD tooling, reducing environment provisioning time from days to hours for QA validation cycles.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React and Node.js features** for a document management platform, converting wireframes into functional components with reusable state management patterns.
- Integrated **REST API consumers** with JSON response handling and error boundary logic, improving client-side reliability for 1,500+ active trial users.
- Wrote **unit tests and participated in code reviews**, adopting team coding standards and Git-based source control practices throughout the internship.
- Assisted senior engineers in **sprint task execution** within a Scrum team, updating Jira status and completing assigned stories ahead of two sprint deadlines.
- Optimized **MongoDB queries** and indexing strategies for user search functionality, reducing average lookup latency by 30% on staging environments.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** using HTML5, CSS, and JavaScript for a nonprofit digital presence, ensuring cross-browser compatibility and accessible markup standards.
- Implemented **client-side form validation** and REST integrations, connecting frontend components to backend services for event registration workflows.
- Collaborated with stakeholders to **translate business requirements** into lightweight technical solutions delivered within a compressed six-week engagement timeline.
- Established **Git version control** practices and deployment checklists, enabling maintainable handoff documentation for foundation volunteers.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Angular, JavaScript, TypeScript, HTML5, CSS, Responsive UI, Component Architecture

Backend: Node.js, Python, Java, REST APIs, HTTPS, JSON, Microservices, Design Patterns

Databases: PostgreSQL, MongoDB, NoSQL, Query Optimization, Data Modeling

Cloud & DevOps: AWS, Google Cloud Platform, Docker, CI/CD, Auto-scaling, Infrastructure as Code

Monitoring & Tools: CloudWatch, Git, Jira, Unit Testing, Code Reviews, Performance Profiling

Workflow & PM: Agile, Scrum, Sprint Planning, Story Creation, Acceptance Criteria, Technical Documentation
