

Ryan Cho

Lead Software Engineer | Full Stack Platform

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack engineer with 8+ years building scalable cloud platforms, RESTful APIs, and modern web applications in React and TypeScript. Proven technical leader who owns end-to-end feature delivery from database design through production deployment on AWS. Deep experience in Java services, event-driven architecture, and comprehensive test automation. Strong collaborator with product and design teams; mentors engineers on quality standards, CI/CD practices, and secure system design in regulated industries.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led **end-to-end delivery** of customer-configurable platform features across **React**, **TypeScript**, and **Java** microservices, reducing release cycle time by 35% through improved CI/CD pipelines.
- Architected **RESTful APIs** and **MongoDB** data models supporting multi-tenant SaaS workflows, enabling configurable business rules without code deployments.
- Drove **technical design reviews** for cross-functional features, partnering with product and design to translate complex requirements into scalable system specifications.
- Built and maintained **AWS** infrastructure using **Terraform**, deploying containerized services with automated rollback and environment parity across staging and production.
- Implemented **Elasticsearch** indexing pipelines for search and analytics workloads, improving query response times by 60% on high-volume data sets.
- Established **Jest** and **Cypress** test coverage standards across frontend and integration layers, raising team coverage from 62% to 89% within two quarters.
- Integrated **Kafka** event streams for asynchronous processing between platform services, decoupling workflows and improving fault tolerance under peak load.
- Mentored **three junior engineers** on code review practices, system design fundamentals, and production debugging, accelerating their promotion readiness.
- Enforced **security and compliance controls** aligned with enterprise data handling standards, including encryption at rest, audit logging, and role-based access across services.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full stack web applications** using **React**, **TypeScript**, and **Java** Spring services for internal banking platforms serving 2,000+ analysts globally.
- Designed **scalable REST APIs** connecting frontend dashboards to backend data services, standardizing pagination, caching, and error handling patterns across teams.
- Migrated legacy reporting modules to **AWS** cloud infrastructure with **CloudFormation**, cutting infrastructure provisioning time from days to hours.
- Implemented **MongoDB** document stores for flexible schema requirements in trade reporting workflows, supporting rapid iteration on regulatory data formats.
- Configured **DataDog** monitoring dashboards and alerting for production services, reducing mean time to detection for critical incidents by 45%.
- Authored **JUnit** and integration test suites for payment processing APIs, achieving comprehensive coverage on high-risk financial transaction paths.
- Participated in **agile** ceremonies and cross-team design sessions, contributing to architecture decisions affecting multiple technology groups within the bank.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React** dashboard components for inventory tracking, integrating with backend **Java** APIs and improving data visualization for operations teams.
- Wrote **unit tests** with **Jest** for frontend modules, catching regressions early and establishing testing patterns adopted by the full-time team.
- Assisted in **MongoDB** query optimization for product catalog searches, reducing average page load latency on listing views.
- Contributed to **CI/CD** pipeline improvements in GitHub Actions, automating build and deployment steps for staging environments.
- Collaborated with senior engineers on **API design** documentation and Swagger specifications for third-party integration endpoints.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed responsive **web application** pages using JavaScript and modern CSS frameworks for nonprofit program management.
- Integrated frontend forms with backend **REST APIs** for donor and volunteer data collection across multiple campaign workflows.
- Implemented client-side validation and error handling patterns that improved form completion rates on registration flows.
- Optimized page performance through asset minification and lazy loading, improving Lighthouse performance scores on key landing pages.
- Supported deployment and bug fixes for production site updates during active fundraising cycles.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Responsive Design, Cypress, Jest

Backend: Java, Spring Boot, RESTful APIs, Microservices, Node.js, Event-Driven Architecture, Kafka

Databases: MongoDB, Elasticsearch, PostgreSQL, Redis

Cloud & DevOps: AWS, Terraform, CloudFormation, Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins

Monitoring & Tools: DataDog, Elasticsearch, Kibana, SonarQube, Swagger/OpenAPI

Workflow & PM: Agile/Scrum, Jira, Technical Design Reviews, Mentorship, Cross-functional Collaboration
