

Ryan Cho

Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Software engineer with experience building user-facing financial products across investment and banking platforms. Skilled in shipping full-stack features with TypeScript, Node.js, and React Native for mobile and web clients handling sensitive transaction data. Delivered real-time payment and account services in microservice architectures on AWS with strong compliance awareness. Collaborative team member who prioritizes documentation, code quality, and mentorship in fast-paced remote environments.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **mobile-first disbursement and wallet flows** using **React Native** and **TypeScript**, giving account holders intuitive iOS and Android paths to access funds and manage balances at scale.
- Built **NestJS microservices** on **AWS** and **Kubernetes** to process **real-time financial transactions**, maintaining low-latency responses while enforcing idempotency, audit logging, and compliance checkpoints.
- Led end-to-end feature design for **user-facing lending modules**, partnering with product, risk, and compliance stakeholders to ship capabilities that met security standards without slowing release cadence.
- Drove **API contract design and service documentation** for a growing remote engineering organization, producing OpenAPI specs and runbooks that shortened onboarding for engineers joining payment domain teams.
- Implemented **sensitive data handling patterns** including field-level encryption, tokenized account references, and role-based access controls across services touching customer balance and eligibility data.
- Mentored **two junior engineers** on React Native performance and Node.js service design, establishing review practices that improved test coverage and reduced production incidents across the mobile release train.
- Shipped **iterative onboarding improvements** to the mobile signup funnel, collaborating with analytics to refine flows that increased completed account setup while preserving required compliance gates.
- Refactored legacy monolith endpoints into **domain-bounded microservices**, improving deployment independence and enabling weekly releases for cash management features instead of coordinated monthly cutovers.
- Integrated **third-party banking and payroll APIs** for automated repayment scheduling, building resilient retry logic and reconciliation jobs that preserved ledger accuracy during upstream provider outages.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java and TypeScript backend services** supporting corporate banking portals used by institutional clients, contributing to platforms handling high-volume wire and ACH activity under strict regulatory controls.
- Built **real-time transaction monitoring views** for internal operations teams, aggregating event streams into actionable dashboards that shortened triage for payment exceptions and settlement delays.
- Collaborated with risk and compliance partners to implement **data retention and audit trail requirements** across customer-facing banking applications subject to financial regulations.
- Delivered **REST APIs** for account balance inquiry and transfer initiation, applying authentication middleware and validation patterns aligned with enterprise security baselines.
- Participated in **on-call rotation** for production payment services, diagnosing latency spikes and coordinating hotfixes that restored service levels during peak trading-day traffic.
- Created **technical documentation** for service integrations and deployment procedures, helping distributed teams maintain consistent release processes across multiple environments.
- Contributed to **mobile-responsive web features** for client account management, partnering with frontend engineers to deliver accessible interfaces for transaction history and beneficiary workflows.

- Optimized **SQL query performance** for reporting pipelines feeding daily reconciliation jobs, reducing batch runtime and improving data freshness for downstream finance teams.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React components** for customer-facing check management workflows, improving form validation and error messaging that reduced support tickets tied to submission failures.
- Built **Node.js APIs** connecting web clients to internal services, following REST conventions and adding integration tests to guard against regressions during iterative product experiments.
- Collaborated with senior engineers in **pair programming sessions** to learn Git workflows, CI pipelines, and code review standards adopted across the team.
- Resolved **UI defects across browsers and devices**, applying responsive CSS fixes that improved layout consistency for mobile users accessing the platform remotely.
- Documented **local development setup** and API usage examples in team wiki pages, helping subsequent interns ramp up faster during knowledge transfer handoffs.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed and maintained **nonprofit website pages** using HTML, CSS, and JavaScript, supporting fundraising campaigns and event registration for community outreach programs.
- Implemented **responsive layouts** so content remained readable across desktop and mobile browsers, improving accessibility for donors visiting from diverse devices.
- Integrated **third-party donation widgets** and contact forms, validating submissions and routing email notifications to foundation staff for timely follow-up.
- Coordinated with stakeholders to **translate content requirements** into publishable web updates delivered on tight nonprofit event timelines.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, React Native, TypeScript, JavaScript, HTML/CSS, Responsive UI

Backend: Node.js, NestJS, TypeScript, Java, REST APIs, Microservices

Databases: PostgreSQL, MySQL, Redis, SQL

Cloud & DevOps: AWS, Kubernetes, Docker, CI/CD, Git

Monitoring & Tools: Datadog, CloudWatch, OpenAPI/Swagger, Jest, Cursor

Workflow & PM: Agile/Scrum, Jira, Confluence, Cross-functional collaboration, Technical documentation
