PROFESSIONAL SUMMARY

Full stack engineer with 8+ years building TypeScript, React, and Node.js platforms across finance and SaaS. Hands-on technical lead for cross-functional squads shipping serverless AWS APIs, IaC-managed infrastructure, and feature-flagged releases without long-term debt. Partners with product and delivery to convert experiments into durable production systems. Leverages AI-assisted tooling across design, development, testing, and troubleshooting.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led full-stack delivery for a **portfolio analytics SaaS platform** serving 200+ institutional users, owning **React and Next.js** interfaces backed by **TypeScript Node.js APIs** on **AWS Lambda**
- Architected a **serverless API layer** with **API Gateway, Lambda, and DynamoDB**, sustaining **sub-200ms p95 latency** during peak trading-day traffic while reducing operational overhead
- Defined **infrastructure as code** using **Pulumi** to provision **S3, SQS, and EventBridge** pipelines across staging and production, standardizing repeatable environment management
- Served as **de facto squad technical lead** for a five-engineer team—conducting daily code reviews, removing delivery blockers, and aligning rapid experiments with **platform engineering standards**
- Implemented **LaunchDarkly feature flags** across frontend and backend services, enabling **incremental rollout** of trading workflows and reducing rollback time from hours to minutes
- Built **GitLab CI/CD pipelines** with automated testing, security scanning, and **continuous deployment** to AWS, increasing release cadence from biweekly to **multiple daily deploys**
- Partnered with product managers to translate **business hypotheses into shippable MVPs** within two-week cycles, preserving maintainability through **typed contracts and integration tests**
- Integrated **Datadog observability**—structured logging, distributed traces, and alert dashboards—cutting mean time to detect production regressions by **40%** on critical payment flows
- Adopted **AI-assisted development workflows** for design drafts, test generation, and documentation, accelerating feature delivery by an estimated **25%** without weakening review rigor

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **internal trading and risk dashboards** with **React and TypeScript**, surfacing real-time positions to desk analysts across **12 global markets**
- Built **Node.js microservices** integrating legacy mainframe feeds, processing **50K+ daily transactions** with idempotent handlers and resilient retry logic
- Acted as **technical liaison** between engineering, operations, and compliance, translating regulatory requirements into **implementable system changes**
- Developed **AWS proof-of-concept services** including **Lambda functions** and **S3 data stores** for regulatory reporting prototypes later adopted by two downstream teams
- Mentored **two summer analysts** on SDLC practices, code review standards, and safe deployment procedures within a **regulated banking environment**
- Automated release workflows through **CI/CD templates**, standardizing checklists and reducing manual deployment steps by **60%** across four application teams
- Designed **event-driven notification services** using message queues to decouple upstream pricing engines from downstream alerting UI components

- Collaborated with senior architects on **API versioning strategy** for shared market data services, preventing breaking changes across **15 dependent consumers**

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **responsive React components** for a restaurant check-management web app used by **30+ NYC venues**, improving mobile order-entry completion rates
- Implemented **Node.js REST endpoints** for check splitting and payment reconciliation, integrating with third-party POS APIs under senior engineer guidance
- Raised automated test coverage on payment modules from **45% to 78%** through **Jest unit and integration tests**
- Delivered assigned stories across **four consecutive two-week sprints**, participating in Agile ceremonies and **Jira-backed backlog grooming**
- Refactored legacy jQuery views into **TypeScript React modules**, reducing bundle size by **22%** and improving long-term maintainability

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **static and dynamic web pages** for a nonprofit foundation site using **HTML, CSS, and JavaScript**, completed within a **10-week contract**
- Integrated **contact and donation forms** with backend email services, allowing staff to handle inquiries without manual HTML edits
- Improved Lighthouse performance scores to **85+** through **image compression and lazy loading** optimizations
- Collaborated with foundation leadership across **two design review cycles** to refine site structure based on stakeholder feedback
- Documented deployment and content-update procedures enabling non-technical staff to **publish updates independently**

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Responsive UI

Backend: Node.js, TypeScript, AWS Lambda, API Gateway, REST APIs, Microservices, Event-Driven Architecture

Databases: DynamoDB, PostgreSQL, MongoDB, Redis

Cloud & DevOps: AWS Serverless (Lambda, S3, SQS, EventBridge), Pulumi, GitLab CI/CD, LaunchDarkly, Docker

Monitoring & Tools: Datadog, GitHub, GitLab, Jest, ESLint, AI-Assisted Development (Copilot)

Workflow & PM: Jira, Agile/Scrum, SDLC, Jellyfish, Cross-Functional Collaboration
