PROFESSIONAL SUMMARY

Senior software engineer with 7+ years building and operating production SaaS and financial platforms end to end across frontend, backend, and cloud infrastructure. Proficient in TypeScript, React, Node.js, PostgreSQL, AWS, and event-driven architectures. Integrates AI-assisted and agentic workflows into delivery while maintaining engineering judgment, code quality, and architectural clarity. Proven record driving cross-functional outcomes, improving developer productivity, and scaling reliable systems.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Spearheaded delivery of internal investment platform modules used by **40+ analysts**, owning **TypeScript/React** interfaces and **Node.js services** from requirements through production release.
- Designed **GraphQL APIs** and **PostgreSQL** schemas that consolidated fragmented data feeds, reducing integration duplication across **three portfolio-management workflows**.
- Introduced **Terraform-managed AWS infrastructure** and **GitLab CI/CD pipelines** that standardized deployments across **12 microservices** and cut release friction for the engineering team.
- Built reusable workflow components and data visualization features that improved **analyst decision velocity** for daily risk and exposure reporting.
- Integrated **Kafka-based event streams** to synchronize position and reference data across services, strengthening consistency under **high-volume market updates**.
- Adopted **AI-assisted development practices**, including structured review of agent-generated code, accelerating feature delivery while preserving maintainability and **test coverage**.
- Partnered with product managers and stakeholders to translate regulatory and business constraints into executable milestones, clarifying **cross-team dependencies** early in planning.
- Expanded **Vitest and Playwright coverage** for critical portfolio workflows, catching regressions before production and improving **deployment confidence**.
- Mentored junior engineers on full-stack patterns, API design, and observability practices, raising **code review quality** and on-call readiness across the platform team.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **risk analytics tooling** supporting fixed-income desks, implementing **TypeScript services** and interactive dashboards consumed by traders and operations teams.
- Automated **reconciliation workflows** that reduced manual exception handling across overnight batch processes spanning **multiple trading systems**.
- Owned **production reliability** for internal APIs during market hours, triaging incidents with **Grafana dashboards** and structured runbooks to minimize downtime.
- Refactored legacy Java and Python components into modular **Node.js microservices**, improving testability and decoupling business logic from batch infrastructure.
- Collaborated with cross-functional stakeholders to define API contracts and rollout plans for **regulatory reporting features** under tight delivery windows.
- Strengthened **Auth0-secured authentication flows** across internal tools, aligning access controls with audit requirements for financial applications.
- Contributed to **internal developer tooling** including shared libraries and deployment scripts that reduced boilerplate for new service onboarding.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented full-stack features for a **B2B SaaS product** using **React and Node.js**, translating product sketches into production-ready user flows with responsive layouts.
- Shipped **REST API endpoints** and database migrations that supported customer onboarding and document tracking modules used in **pilot deployments**.
- Wrote unit and integration tests for core business logic, establishing baseline **automated coverage** practices adopted by subsequent engineering hires.
- Participated in agile ceremonies and paired with senior engineers to refine requirements, improving **iteration turnaround** on customer feedback.
- Resolved production defects in authentication and permissions flows, hardening access behavior before the platform expanded to **additional client segments**.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** for a nonprofit digital presence using **HTML, CSS, and JavaScript**, delivering accessible layouts aligned with stakeholder content goals.
- Configured **CMS templates and asset pipelines** that enabled non-technical staff to publish updates without engineering support.
- Optimized page load performance through image compression and lazy loading, improving **mobile experience** for primary site visitors.
- Collaborated remotely with foundation leadership to iterate on design feedback within a compressed **three-month engagement** timeline.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, Ant Design, HTML5, CSS3, GraphQL Client, Responsive UI, Component Libraries

Backend: Node.js, TypeScript, Apollo GraphQL, REST APIs, Kafka, Microservices, Event-Driven Architecture

Databases: PostgreSQL, SQL, Data Modeling, Query Optimization, Redis

Cloud & DevOps: AWS, Terraform, GitLab CI/CD, Docker, Infrastructure as Code, Serverless

Monitoring & Tools: Grafana, Auth0, Vitest, Playwright, Jest, Observability, OpenTelemetry

Workflow & PM: Agile/Scrum, Cross-Functional Collaboration, Technical Design Docs, Code Review, Mentorship
